1. Trade for Johnson Thunderbolt

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-01 00:45:27 UTC
From: Mike <wb6vse@ipa.net>
Message-ID: <Elu%6.3805$du.1439271@nntp1.onemain.com>
Source record: 51795

Anyone of the mood to trade a working Johnson Thunderbolt for my Henry 2KD-5 amp? The tubes are new Eimac, with less than 2 hours on them. I want to set up my NEW Johnson Pacemaker with the matching amp. Must be in good cosmetic and working condition, as is my Henry. The Henry is not for sale, trade only!

Thanks for reading.
You can email direct to wb6vse@ipa.net if you like.
Mike/K5VSE

12. FOR TRADE: HALLCFTRS SX-62

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-01 13:59:45 UTC
From: W9STB <telegrapher@hotmail.com>
Message-ID: <9hnaabuql1@news.chatlink.com>
Source record: 51806

I ended up with a spare SX-62 (somehow) and am looking to swap it on
something of a 1960s-or-previous vintage transmitter, receiver, antenna
tuner...what have you?
The receiver is in operational condition however needs cleaning and TLC. The
worst thing I can say about it is that there exists a blemish on the left
lower side of the dial faceplate (beneath the dial adjust knob) where the
original paint has worn off and you can see the black undercoating. Also the
SELECTIVITY knob has been replaced with a non-original (although similar
looking) knob.
Copy of manual is included. JPG pictures on your request.
What have you got?

Vern W9STB
Grand Chute, WI

13. FS.Vintage BRT400/402 Comm'ns Rcvr,by GEC.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-01 16:03:58 UTC

Message-ID: <tjuif6m5mhjma1@corp.supernews.co.uk>
Source record: 51807

FOR SALE

BRT 400/402 Communications Receiver,made by G.E.C.(General Electric Company).

Although these high quality receivers were made in the UK,(where our ,radio-exports.com is based),we do not see them very often.
They were mainly produced in the late 1940's for commercial use.

The impressive SPECIFICATION,is as follows:-

The receiver is a superhet, which uses a total of 14 tubes.
The frequency range covered is 150-385 kcs and 0.51 to 30 Mc's.,in 6 bands.
The effective scale length 41.5 feet per band.(Scales are on edge lit perspex strips.)

Sensitivity <1 microvolt,for 1.5 watts out.

Image Attenuation >30dB at 30 Mc's.
Selectivity.Telephony 5.5,9.0,13kc's. CW, Crystal Filter 0.5,1.0,2.0kc's
AVC 3db change for 100 db change in input.

Outputs 600 ohms 0.2 W,120 ohms 0.05 W,2.5 ohms 2.5 W,15 ohms 2.5 W.
If 455 kc's.
Fitted Signal Strength Meter

Switched Audio Outputs for Speech or Music.
BFO
Noise Limiter.

Power supply uses tube smoothing ,to achieve very low hum levels - no electrolytics used.
Operation is from 95-130 volts ac or 195-250 volts ac.

The condition of this impressive looking receiver is very good.The front panel is in excellent original condition and retains the original clear lettering.The front panel is not scratched or dented.
The components are original and fully functional.The receiver has not been modified in any way.

The receiver which weighs 72 lbs, is designed for mounting in a standard 19" rack.It is 10.5" high x 14.4" deep.

This receiver has been thoroughly tested and is in full working order.

The price,which includes packing for shipment,Air Freight to the USA,and a copy of the 93 page maker's handbook,
is only $695 US Dollars.

It is worthy of note that last one which we had,which can be seen on our site http://www.radio-exports.com sold for just short of $1200 (and it had a poor front panel),so this one has to be a real bargain, at just $695 inclusive!

For more information,or to reserve this particularly nice example of a hard to find set,please contact

Graham Leo info@radio-exports.com

Thank you for your interest.

24. Advice on Mic element for Telex Boom mic set

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-02 02:49:39 UTC
From: thompson@mindspring.com
Message-ID: <9honfr$2ro$1@slb1.atl.mindspring.net>
Source record: 51818

I have three old Telex Boom mic sets. Unfortunately one has a bad mic element. I have the instructions that come with one and no where is there any info on how to get the mic cover apart. The mic portion is molded plastic and there is a separate piece next to the element that appears to be separate. I am afraid to twist the element and there are no screws as with several others I have.

Does anyone have details on how to get the cover off so I can replace the element or do I just relegate this to a mere headset (that portion works fine)?

Thanks in advance for any help.

26. AC/DC sets and hum

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-02 03:47:00 UTC
From: Bill Meacham <NOexray@coqui.net>
Message-ID: <3B3FEEB4.66E901F8@coqui.net>
Source record: 51820

Many 30's sets that I encounter with the 25Z5+radio configuration seem to have an unacceptable level of hum. Many say that this is the norm, others purport that a typical s***ty speaker should reject the hum, others fall quiet after the normal heater-cathode leakage question is addressed.
Maybe its just me, but can sets of this ilk actually perform as well as transformer operated sets?

FS-HW101 and HP23 in good condition and recently aligned and some tubes replaced. Plays well and have manual-$150.00 plus UPS from 02458 Newton,MA

Ten Tec Triton 4-covers 10-80 cw/ssb, rebuilt pto, 100 watts out, cw filter, manual, DC cable, hand mic. Its in good condition and would make a great backup-portable-mobile rig. $200.00 shipped.

32. FS.C12 HF Transceiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-02 08:14:57 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tk0bbotdrtd75d@corp.supernews.co.uk>
Source record: 51826

For Sale C12 HF Transceiver

The C12 transceiver,was developed by the British after WWII, as a replacement for the earlier W.S.19 transceiver.
It is basically an improved version of the W.S.19 (and is interchangeable with the 19 Set,in most situations).
It is similar to the WS19 in size,but is of much smarter appearance and much better quality.
Overall,the C12 has a better performance than the W.S.19 and the interior of the set is of superior construction.

The C12 consists of an AM and CW, sender/receiver.

The set may be pre-tuned to any of two alternative frequencies and switched instaneously from one to the other,without re-tuning.
To provide this facility,all tuning controls are duplicated,aerial tuning included, and a single switch is used to transfer the tuning from one set of controls to the other.
The Sender and receiver are tuned automatically to the same frequency.
The overall frequency coverage is 1.6 -10.0 Mc's.

The example which we have for sale at radio-exports.com,is a particularly nice one,in all original condition.

Included with the set,are the following:-
the correct original power supply, designed to operate from 24volts dc (@ a max of 9amps on voice-send),
the original interconnecting cable and plugs linking the psu to transceiver,
the harness for the set,comprised of interconnecting cables,junction box,headphones and microphone.

This set is in excellent condition externally and the inside is in untouched, mint condition.The harness,is as new.

To make life easier for anyone not used to operating these sets,a copy of the User Handbook will be included with the set.

The price for this excellent transceiver,which includes the cost of packing and of air freight to the USA, is only $495 US Dollars.

If you would like to order,or would like more information,please contact

Graham Leo info@radio-exports.com

Thank you for your interest.

Do the hummin' radios have the power switch on the volume control? Is it
between the hot wire and the rectifer or between the neutral and the chassis?

Have to wonder if a bridge rectifer between an isolation transformer and the
radio would make a difference.

Date: 2001-07-02 13:31:31 UTC
From: jimmoci@aol.com
Message-ID: <20010702093131.27399.00000190@ng-ck1.aol.com>
Source record: 51829

Anyone ever been to this 4th of July hamfest? Looking for some boatanchor stuff amongst other things and wanted to know if it is worth the trip. Does this normally have an OK turnout for the holiday or is it a dud?
Thanks for any info!
Jim

> SX-62B?
==========
Frank:

I have have seen two versions of the SX-62(A,B) dial scales. The early one was used on the SX-62 and SX-62A up until about 1960. The later version was used on the SX-62A (and SX-62B) after about 1960, or so. The SX-62 came out in 1948 and the SX-62B passed on in 1966 for a production span of 18 years. The early and late dial versions used different art work. The country/frequency markings are different as well as the fonts for the lettering. I don't know of any repros available.

Best Regards,

Ed

Jim --

I went to last year's gig. It's not that big, but I did see enough boat anchor stuff (albeit way overpriced) to make the trip worth while. Picked up a few nice parts for some tube HB projects also.

It's definitely not the size of Timonium MD, but all in all I did find it worth the trip.

FOR SALE RACAL MA168 DUAL DIVERSITY SWITCHING UNIT.

The Racal MA168 Dual Diversity Switching unit is a transistorised equipment, designed for use with either RA17 series receivers or with RA117 receivers.It is used to reduce the effect of fading resulting from adverse propagational conditions.
The unit is essentially a high speed electronic switching device, which automatically selects the greater i.f.output of two receivers.
The unit has a built in stabilised power supply and will operate on voltages from 110 to 240.It will accept rt signals,ssb signals and telegraphic signals with speeds of up to 1000 bauds.
The i.f.input signals to each path are continuously monitored by two meters.
The Adapter,which is designed for standard 19" rack mounting,is a compact 2" high.

The unit is in very good all original condition and is in full working order.A copy of the manufacturers operating and maintenance manual is included.
The price for this useful Racal accessory,which includes the cost of packing and air freight to the USA,is $485 US Dollars.

Source record: 51752
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

For Sale:

Heathkit DX-40 transmitter. Front panel looks really nice.
Two small scratches, otherwise clean and shiny. Correct
knobs, meter, switches, jacks, etc. Cabinet is fair, with
some chipping, scratches, etc, but not hacked up or dented.
NOT ORIGINAL INSIDE. Power transformer was replaced with a
non-Heath part. Extra set of filter caps added, originals
replaced, 5U4 replaced with 1N4007 diodes. Tubes are good.
All AM modulator components have been removed. Rig works
fine on CW on all bands, but does not work on AM (AM could
be easily restored, I just don't have the inclination to do
so). Here is a link to a photo of the front panel:

http://www.qsl.net/k5dh/dx40.jpg

Asking $50 plus shipping. Not really interested in trades
at this time (too much gear already; trying to thin out!).

This is NOT a "collector's item". It's a good CW rig that
you can get on the air with and have some fun, and not have
to worry about its "collector value".

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-03 15:57:30 UTC
From: Jon Harder <jon@praxisworks.org>
Message-ID: <KXl07.1691$sU1.734038@news1.news.adelphia.net>
Source record: 51756

Wanted to mention a reasonably priced source of "non-antique" but high-quality electrolytics in small sizes.

Just finished replacing the high-voltage electrolytics in a Hallicrafters HT-46 using high-voltage caps purchased from Hosfelt Electronics in Steubenville, OH. (1-888-264-6464) This is the fourth rig I've recapped this year with their speedily delivered parts, and the results are always fine. (I have no financial interest except keeping my costs down! Be sure to ask for their excellent catalog if you call, or request it on their limited website, at www.hosfelt.com)

In the HT-46, space is reallly limited, so I placed two 100 mf/ 450v axial electrolytics on a small piece of insulated perf board mounted sturdily on spacers one inch over the chassis holes where the two original large can electrolytics used to be. This very much improves air flow from underneath, and the appearance is pleasing though of course not original. Purists would want to replace with similar form-factor caps, I'm sure, but readily available new parts do a great job if the main object is restoring a defunct power supply to operating condition.

Source record: 51760

Hi All,
I have the european version (DR49) of the Panasonic RF4900 For Sale. This unit covers .53-30 mhz in continuous coverage over 9 bands. FM is on a seperate band. There are lots of bells and whistles on this unit and they all work. This is an analog/digital receiver and there is a switch to turn off the digital display. Other controls are Antenna trim, RF gain, Band width, AM/SSB and ANL. There is also a calibration setting for SW. Output jacks include external speaker (4-8 ohms), rec. out and auxilliary output. Seperate bass and treble control provide very nice sound on this set. This unit has been serviced recently, aligned and even had the pilot lamps replaced. It comes with a copy of the owners manual and service instructions. I am asking $175.00 plus shipping from the 07860 zip code. I have digital photos available to interested buyers.
rgds,.

I have a mil surplus modulator unit from APS-104 search radar (likely from B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Great collector or experimental item. Located in southeast Alabama, 36330 zip. Email or call 334-347-5281 day/eve.

Message-ID: <tk5p083gcnd9af@corp.supernews.co.uk>
Source record: 51782

For Sale.R107 Communications Receiver circa 1945

For the benefit of anyone not familiar with the R107 Receiver,this is one of the "classic" Communications Receivers from the
era of World War II.

The circuit uses a total of 9 tubes ,and the frequency coverage of the set is from 1.2Mc's to 17.5Mc's.
It is pretty versatile as regards to its power requirements and will operate on either American or European a.c.mains ,or from 12volts dc.
This particular example is in extremely good, original condition,with original finish and lettering on the front panel. All knobs and switches are present and correct.

This particular R107 still has the protective case front ,and,even retains the large scale receiver schematic,correctly fixed inside of the lid.

The R107 receiver is impressive, for a number of good reasons.
Firstly, the "flight deck" array of front panel controls. No less than14,plus various sockets,for antenna,headphones, etc.
Secondly,it is impressive by virtue of it's size and weight;
Dimensions are 24" x 13" x 17.5" and the weight almost 100lbs.

The R107 which we have for sale is in full working order.

A copy of the very comprehensive manual for the set will be included.

This is truly, a classic boatanchor, if ever there was one!

The price for this most impressive receiver,which includes the cost of packing and air freight to the USA,is an extremely competative $540 US Dollars.

If you require any additional information, or want to reserve this set, please contact Graham Leo info@radio-exports.com
Thank you for your interest .

Anybody have one of these? I picked one up a while back. It is a precision adjustable capacitance box designed for calibrating (military) aircraft fuel gauges. It is a General Radio product containing two massively constructed air variable capacitors and a switched bank of fixed capacitors to add capacitance to one of the variables.

I am trying to determine whether this unit is functioning normally. I would like to compare observations with someone who has a known working unit.

Please respond by e-mail.

Brad

92. FS.A41 Military Tx/Rx (UK circa 1960's)

Source record: 51786

For Sale.A41 Military TX/RX (U.K.Army 1960's)

Interesting boatanchors constantly arrive at radio-exports.com and the A41 Military Tx/Rx is one of the recent additions to our constantly changing stock.

This well built,compact and relatively lightweight set, dates from around 1960 and was designed for the British Army, for use as a Manpack/Groundstation set.It was mainly used by infantry units.

The A41 otherwise known as WS No.41, is a vhf ,fm ,voice sender/receiver .It is continuously tunable over the range of 38Mc's to 55Mc's.,so the set has obvious potential for practical use on the amateur bands.

The sender/receiver is built into the upper section of a metal case.There is provision for batteries (not included) in the lower part of the case.The set is mounted on a back-packing frame ,complete with webbing straps.

To cater for both ground station and for use on the move,three antenna sockets are provided; short rod ,long rod and remote aerial feeder.

This particular set is exceptionally well equipped with accessories and includes the following. Earphone and microphone headset,telephone handset,signals satchel,antenna connecting cable,folding rod antenna ,flexible antenna adapter,matching unit,audio extension adapter,audio extension lead,artificial antenna and a copy of the Operator's Handbook.

The set and it's associated equipment are all in good original condition.

The price of this potentially very useable transmitter/receiver,which,please note, includes the cost of packing and air freight to the USA,is just $385 US Dollars.

If you would like more information or wish to reserve this set,please contact Graham Leo info@radio-exports.com

Thank you for your interest.

93. Re: Need some Hi Voltage Electrolitics please help

Source record: 51787

Sometimes you can get caps small enough to fit inside the
old twist-lock casing. Great way to maintain the appearance
of your boatanchor. A PC mount or axial cap mounted on
a piece of perfboard can be mounted in place of the twist-
lock but looks kind of hokey. Otherwise you might find
space below the chassis. Always isolate and even gut out the
old cap if you leave it in place or you will have leakage and
possible shorting.

94. FS.R109 Communications Receiver (UK Military circa 1950)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-04 16:20:20 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tk6ghli86dt123@corp.supernews.co.uk>
Source record: 51788

For Sale R109 Communications Receiver

The R109 Communications receiver,dating from the 1950's,is a well designed,compact equipment,made in relatively small numbers for use by the British Army.
It is quite a collectable,as well as useable communications receiver, which here at radio-exports.com ,in the UK,we do not see very often.This particular one is a very nice example.
The frequency coverage of the receiver,which uses 8 tubes in the circuit, is from 2Mc's to 12Mc's.
This set still has the internal pull out spares tray,(which is usually missing),containing the original set of spare valves and a spare vibrator).
Externally,the receiver is in good condition and internally,it is nearly mint.
The receiver is in good working order.
If you do not currently have an R109 in your collection of vintage boatanchors,this is a rare opportunity to rectify that deficiency.

The price,including the cost of packing and of air freight to the USA, is a very competative $320 US Dollars.

If you would like more information or wish to reserve this scarce set,please contact,

Graham Leo info@radio-exports.com

Thank you for your interest.

Source record: 51649

trying to restore a RME-99 that a butcher worked on. I need help! I received good advise about my SP-600 here and am really thankful to those who replied.

The noise limiter /detector was completely re-wired, The last IF stage has been changed from what the schematic shows. On the last 7A7 IF the cathode resistor is 500 ohms instead of 300 and the screen is tied directly to the VR-150 intead of through a 5K . The 0.01 screen bypass is missing too. The first audio grid goes to the volume pot cenetr tap and the end on one of several caps that have]the other end hanging in space. The dropping resistor for the
VR-150 was 2k instaed of 1.5k.

As you can tell much has changed since 1940 and the quality of the work this butcher did was horrible. Cold Solder joints, components haning in mid air, etc.

I'f any of you have an RME-99 I'd like to correspond with you on how yours is wired.
If any of you have any RME equipment that your parting out I need t of the ball bearing reduction drives for a DB-22 and a VHF-152 I've recapped and want to
close up.

107. Hallicrafters S38C bottom / back

Newsgroup: rec.radio.amateur.boatanchors

Source record: 51655

FOR SALE
Argentine Communications Receiver Model 8722A (War Trophy from the Falklands War)

We have an interesting receiver,taken as a trophy of war by a British soldier,during the war between
Argentina and Britain.
It is a transistorised Communications Receiver,as used by Argentine Armed Forces at the time of the war.
Frequency coverage is 1.5Mc's to 18Mc's in 4 switched ranges.
The design incorporates Switched Selectivity,BFO,AVC, & Calibration check.
It is fitted with an internal speaker.
The receiver is designed to operate from 12volts DC,either from an external source or from 8 standard 1.5volt D cells,
for which a battery compartment is incorporated in the set.
Apart from some very minor corrosion on the chassis, in the vacinity of the battery compartment,
this communication receiver is in good original condition.
The original metal detachable front cover,designed to protect the controls when the set is not in use,is included.

This receiver is in full working order.

This is an unusual,very well built set,and quite rare.It is a desirable collectors item in its own right.

The price,which includes the cost of packing and air freight to the USA,is just $395 US Dollars.

If you would like more information or wish to order this set,please contact GrahamLeo info@radio-exports.com

Thank you for your interest.

112. FS.Racal MA197 Pre-Selector

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-05 09:03:43 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tk8bb1c3mbte26@corp.supernews.co.uk>
Source record: 51656

FOR SALE Racal MA197 PRE-SELECTOR

This accessory was designed by Racal to achieve two objectives:-

Firstly,to bring about a considerable improvement in the front -end selectivity of receivers such as the RA17 and RA117 , by introducing a high degree of
pre-selection.
In real terms,the use of this unit will result in a nearby signal (5% off tune), being attenuated by 80dB's,
in the range of 2-24Mc's.A most effectiveway of sharpening the performance.

Secondly,use of this unit solves the problem of operating any receiver (not just RA17 and RA117 receivers), in the vacinity of high-power transmitters.It will effectively protect receivers from front end damage or even burn out,since it will withstand r.f. signals of up to an incredible 40 volts!
This makes it a very valuable item to have in the shack, for use in front of "electrically vunerable" modern receivers.

The unit is designed for standard 19" rack mounting.Operation is from either 100-125 volts or 200-250 volts.
It is in good ,original,unmodified condition.We have tested it on air and it is in full working order.

This is one of the most versatile and useful accessories to be made by the prestigeous Racal Company.
The price,which includes the cost of packing and of air freight to the USA, is $480 US Dollars.

If you would like more information or wish to order,
please contact GrahamLeo info@radio-exports.com

Thank you for your interest.

Date: 2001-07-05 16:20:16 UTC
From: loren hunt <lhunt@tpr.com>
Message-ID: <3b4492a6$1@news1.abac.com>
Source record: 51663

I just earned my General ticket and am looking to buy a HF transceiver. With 2 kids in braces I don't have much I can spend so I have been looking for an older used rig. I figured I could get a really cheap tube job and fix it (I like doing that sort of thing) but it looks like everything out there is a collector item these days. I don't care what it looks like or how much power it puts out as long as I can get out there on 10 or 20 meters.
All that said, any ideas?

Just a few ideas -- for tubes, a Yaesu ft-101, or a Kenwood 530 or 830. For
solid state, a Kenwood 440 or Icom 735. Do searches on ebay,
http://listings.ebay.com/aw/listings/list/all/category4670/index.html
or try the newsgroups,
rec.radio.swap
or
rec.radio.amateur.equipment

Also, Ten-Tec at http://www.tentec.com/Amateur.htm can be contacted for demo
rigs or factory-refurbished, used rigs.

Source record: 51667

Of all the older tube type equipment the one this is probably under price and might fall into your budget is the SWAN equipment. Some people say they drift to much but if let to warm up first or if you uses the external VFO they are not bad. The 350 and 500 are probably the best and cheapest. Galaxy also made a couple of transceivers the Galaxy V (80 to 10) and the Galaxy III (80 to 20) that I have seen on ebay go very cheap.

The next price step would be the Heathkit SB101 or the SB300 and SB400. What is nice about the Heath equipment is that it is very well documented so fixing the stuff is realatively easy.

The next step up would be the Drake line of which I am a collector of. TR-3 and TR-4 can be bought realatively cheap. Drake made a line of very reliable equipment which I believe is even more reliable than the Collins stuff. I also have a lot of Collins of which most of it has some sort of problem.

There may be some I missed but the above should get you something realatively cheap and reliable.

Summer time is the time to buy equipment on ebay for some reason prices seem to be a little lower than during the winter.

As far as solid state equipment goes probably the Icom 706 used though not a very old radio have been selling very cheap and is a very nice radio. Kenwood TS440 and TS430 I believe are still over priced for being as old as they are getting.

Just my 2 cents worth,
Ron WA0KDS/7

FOR SALE RACAL MA1720 HF DRIVER
If you are looking for a high quality,very stable, versatile, HF Transmitter Driver, radio-exports.com in the UK,have just what you need.
The RACAL MA1720 Transmitter Driver provides full coverage from 1 Mc to 30Mc's in 100c's steps.
A notable feature of this unit is the high stabality of the output, from theall solid state circuitry .
Locking of the selected synthesised frequency is achieved in approximately10 milliseconds.

Operational facilities selected by front panel controls are:-

LSB.,USB.,ISB.,KEY,AM.,CW.,RTTY.,RTTY Test,VOX & PTT.

The usual facilities are incorporated for receiver muting,antenna switching,receiver monitoring,drive unit side tone to receiver etc.
Output is adjustable from 25mW to 200mW and the output impedance is 50 ohms.
The unit,which is 7" high, is designed for standard 19" rack mounting.
Power requirements are 100-125 or 200-250 volts ac.

This is an extremely well made and versatile unit.
It is in very good condition and is in working order

The price, which includes the cost of packing and air freight to the USA, is $795 US Dollars.
If you would like more kinformation,or wish to order,
please contact GrahamLeo info@radio-exports.com
Thank you for your interest.

134. FS.Racal HF Synthesiser MA350

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-06 08:16:43 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tkasus6n8j9v30@corp.supernews.co.uk>
Source record: 51678

FOR SALE
RACAL MA350 HF SYNTHESISER
This increasingly scarce item of Racal equipment,is designed to provide superb frequency stability,when used with the Racal RA117 HF Receiver or the Racal MA79 HF Transmitter Driver.It is also capable of being coupled to both the Receiver and the Driver at the same time,when transceive operation is required.
The synthesiser is fully, transistorised.

The desired frequency is set in increments of 100kc's,10kc's,1kc's and 100c/s.
Further division is achieved by use of the interpolation control,calibrated in 100 divisions and which may be used on the 10kc's,1kc's and 100c/s settings.

A meter indicates the locking condition,in conjunction with an out -of- lock lamp.Output level is also indicated by the meter.

The synthesiser is designed to fit a standard 19" rack and is 8.75" high.Weight is 60lbs.

The synthesiser is in extremely good condition,and it has not been modified in any way.
It is in good working order.
Operation is from either 100-125 or 200-250 volts a.c.

If you have either an RA117 Receiver or a MA79 Driver,and wish to achieve the ultimate frequency stability from these units,(Racal quote 1 part in 10,000,000.0),then this MA350 Synthesiser is a must for you.

The price,which includes the cost of packing and of Air Freight to the USA,is $750 US Dollars.
If you would like more information or wish to order this unit,please contact:-
Graham Leo info@radio-exports.com
Thank you for your interest.

Aye! the Heathkits like the SB-101and 102 and HW-101
(all take HP-23 power supply) have similarities and were
clean and stabile from the gitgo. The layout and operation
of the controls are excellent but features are Spartan. Some
of them had unresolved problems, but most are fixable with
little more than a soldering iron and junkbox or generic parts.
I have seen them untouched at local swap meets for $65-$150.
The manuals are complete and extremely detailed with circuit
descriptions. Beware of broken dial mechanisms. Heath
made several solid state kits too, until the SB-1400, which
was actually a Yaesu FT-757 that was repackaged for
their ham radio course.

Heathkits were well known for having the most detailed
and easy to understand manuals and no doubt forced
the competition to try to do so too. After Heathkit went
out of business, the manuals for ham rigs became less
and less informative of their circuitry. Today we are
lucky to get small detached schematics that are easily
lost in the shuffle.

Early Kenwoods are nice clean rigs with excellent
features, but are a bit more complicated and expensive.
My personal favorite is the TS-830s because it has many
operating features that make it competitive with newer
Hi-end rigs; NB, variable passband and selectivity,
WARC coverage, Processor and accurate frequency
display. All of these features work very well, and the
excellent layout and operation of the radio will spoil
you. The only difference is that you will want to
plug it into a wall socket and tune the radio, but maybe
do away with the antenna tuner.

I do not recommend the Swans to anyone but the
technically inclined. Many of them were popular for
11 meter modifications and were terribly abused.
Also, certain models were plagued with signal purity
problems and were prone to require re-tubing and
meltdown repair.

The FT-101s often suffered as well but had a stock
11 meter option and were clean to begin with and didn't
require constant re-tubing or meltdown repairs. Circuitry
and operation are very similar to the SB-101/2/HW-101
but included AM operation.

Collins radios are very nice. You pay more for quality
engineering, materials and manufacturing but still have
little more features than the SB-101/2/HW-101 radios.

Drake TR-3 and TR-4s can also be found at low prices
and are good classic radios. The R-4 receiver has
variable selectivity, passband, NB and a very stabile
PTO. It and its matching T-4 transmitter are very nice
some and can sometimes be had for a good price.
Like most of these radios, they can be often be updated
for WARC and MARS operation by adding heterodyne
crystals. This pair has a switched rear apron bank of
sockets and information in the manual for general coverage
operation along with full alignment instructions.

All the advice has been good. I'll add that I personally would stick
with the Heathkits, or any other rig that uses 6146s. The sweep tubes
in the Drakes and Swans are pretty darn costly these days and really
don't hold up very well. 6146s can be found somewhat cheaper and it
takes effort to damage them.
You don't want to spend $150 for a rig and hafta spend another $50 for
finals!

Johnson had one, but don't remember much about it.

I used the Heathkit SB-10 on the Valiant that I had some years back. As I remember it worked well.

The Valiant had a drift problem...but I installed a seperate filament transformer for the VFO assembly only. And left it run 24/7. Helped quite a bit.

I notice the TenTec line hasn't even been mentioned.

A good, all solid state, no frills, 100w transceiver, digital readout.
Non-WARC bands is the Ten Tec Triton IV Digital. Runs off of 12v. Great
receiver and a supurb CW radio.

156. Re: Aluminum panels

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-06 23:15:48 UTC
From: dharlan <dharlan@ameritech.net>
Message-ID: <3B4646A4.F21E07FE@ameritech.net>
Source record: 51701
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

Hey Bill,

Well seems to me in the good old days those black wrinkle
panels were steel. A real pain in the Arss. Black wrinkle paint
is available at most auto parts stores and the aluminum panels are
much easier to work with. Use krylon 1613 semi flat black for
back side of the panel and shoot the front with any spray can of
wrinkle.(they all seem to work equally bad)

A good hot day in direct afternoon sun will help insure
a good wrinkle on a flat panel when done in black. Case's boxes and
3 dimensional items will require all of the above and a heat gun
and or gas grill. No basis other than my own experience here but
I have noticed that wrinkle only wrinkles when applied to bare
metal. Use a chemical stripper to remove any other paint or primer,
if you have a hunk of bondo or filler in there just standby with
the heat gun for that spot. Heat it from the back and be prepared
to strip it off and do it again if ya need to.

My observations are based on present day materials, I know
most WWII stuff was primed with Zinc Chromate and all that, but all the
paint formulations have changed. Some changes good, some bad. I blame
the bad changes on the EPA and 68% of the population of California,
I credit the good changes to American engineering and intellect.

The Valiant (1) never did have a matching SSB adaptor...that I am aware of. The Valiant II (two) did have. It was the Viking Sideband adaptor. You can use a number of low output (1-3 watts) SSB exciters with the Valiant. Heathkit made one,Central Electronics,10B and 20A,B&W 51SB,and there may be others.

Take care,
Stan

Hi Simon, I would check out the Collins Collectors Association web page at:
www.collinsradio.com

you can subscribe to the Collins Collectors Association reflector and get an
answer to your question at: http://www.collinsradio.com/html/subscribe.html
I looked in my KWM-1 manual but didn't find a part number. You are correct
it looks like the R-390A knob but is smaller. Hope this helps 73's Larry

Might be interesting to poke around inside this radio and find out who really made it. I doubt the Argentines made their own military radio gear (though they might have). Lots of companies specialize in commercial and military gear, and they aren't too picky about who they sell to.

I just hope it isn't by Racal :-) --Mik K.

For simplicity, it's hard to beat the National NCX-3. Small and easy to operate. I disremember what fianl tube it uses. Only real problem is, it covers only 75, 40, and 20m, with the sideband appropriate to that band.

I still remember bringing mine home from a hamfest (cost me $100 with the power supply), plugging it in and hooking up the antenna tuner. I got it loaded and dipped in a minute. No sooner do I witch back to receive than I hear a CQ! I grabbed the nearest PTT mike and jammed it in. Nothing much happened. After I realized I had it plugged into the Headphone jack, the OM fortunately repeated his CQ. This time I jacked into the right hole and nailed the contact! All within 5 minutes of hooking it up. Try that on a KWM-2 (and have a case of 6146s handy :-). 73, Mike K. AA1UK

Yeah, I still think a much better idea is one of the solid state rigs from the 80s or early 90s by icom, yaesu, kenwood or ten tec. They don't drift like the old dogs, and you can easily find something decent in the $200-$500 range.

182. Groundwaves - use 'em

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-07 14:04:43 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <9i74u8$h10$1@plutonium.btinternet.com>
Source record: 51726

NOW AVAILABLE, Program "GRNDWAV3.exe"

Groundwave Propagation vs Distance, Type of Terrain & Frequency.

Although the computed results of this program are valid up to 30 MHz and above it will be of greatest use and of greatest accuracy from 2 MHz down to ELF. Radio amateurs working on 136 and 73 KHz will find it a useful guide on what received signal strengths to expect over very long groundpaths.

The relatively short ground paths above 7 MHz are seldom used except for cross-city rag-chewing. And in any case, depending on time of day and operating frequency, the groundwave may be swamped by very high-angle signals reflected from the ionosphere. But it should not be forgotten the groundwave is present at a very reliable and constant level for 24 hours of every day of the year.

During darkness, when the F-layer Critical Frequency is low, the HF groundwave is usually the only path available. Signals may not be strong but the signal-to-noise and signal-to-interference ratios above 14 MHz may be excellent even well beyond the radio horizon. At 14 MHz the radio horizon is about 20 miles.

(The radio horizon is not a true horizon. It is the distance at which the effects of Earth curvature begin to be felt. Up to the horizon the Earth can be considered to be flat. At 136 KHz the horizon is at about 100 miles.)

The program computes propagation loss between two, short (in terms of a wavelength), vertical antennas. Such antennas are the only type available at LF and VLF even to commercial operators. Relatively high efficiency is achieved only by using extensive ground-radial systems. However amateurs can get by with quite modest ground electrodes. Vertical antennas, highly efficient radiators at 21 and 28 MHz which put out very strong groundwaves, are very popular although they are mostly used as low angle radiators for long distance ionospheric contacts during daylight.

The greatest uncertainty in program input data will usually be in antenna efficiency. Actual efficiency on antennas much shorter than 1/4-wavelength is usually worse than expectations. Some guidance is given in the program's notes on estimating efficiency. For more accurate estimates use other programs.

TANT136 can be considered as a companion to this program. Amongst other things it calculates the efficiency of a simple vertical up to a height of 1/4-wave or a simple T antenna, both above a set of

buried ground radials.

If the performance of the ground system is known then program
TOPHAT1 will compute the efficiency of a top capacitance-loaded
vertical up to a height of 1/4-wave. For a simple vertical just set
the length of the top hat radial rods to zero.

This new program, GRNDWAV3, may be used in reverse to determine the
efficiency of any vertical antenna when both radiated power and the
field strength at a known distance have been measured by some
means. This is a standard procedure.

Download programs in a few seconds. Not zipped up. Run immediately.

From: K5VSE <wb6vse@ipa.net>
Message-ID: <8_E17.3897$Wp1.1292965@nntp1.onemain.com>
Source record: 51729

Hi,
Still looking for anyone that might be interested in trading their Johnson Thunderbolt in good condition, for my Henry 2KD-5 in the same condition. It has new Eimac 3-500Z's with about 2 hours on them. Full output, 80 - 10 meters.
Need two of the small Maroon knobs with the small white insert, for a Pacemaker. Ranger and Valiant knobs are the same, and probably others. Also, need the 9 pin plug for the Pacemaker rear apron. Look around the shack, and I'm sure you will find some to help me finish a very nice Pacemaker.

Thanks
Mike/K5VSE

I'm getting out of the hobby, I guess I was never really into it. I have 2 Yaesu transceiver's for sale, damn near new, antenna's, and power supply. I used them primarily for listening, I only actually talked on them a few times to get weather information from a local net. Here's what I have:

All radio's bought from: Ham Radio Toy Store, Inc.
117 West Wesley Street
Wheaton, IL 60187

Yaesu FT-530, 2M/440cm, expanded for MARS/CAP, 2 batteries/ 7.2V @ 1800mAh, 7.2V @ 600mAh, RS speaker/mic, wall charger, original box w/ packing materials & manuals.
$400

Yaesu FT-2500M, Heavy Duty 2M FM Transceiver, RF Output Power 50/25/5W, DTMF backlit mic, original box w/ packing materials & manuals.
$350

Hustler G6-270R base antenna, 2M/440, 102", 6dBd VHF/UHF, 100W
I have all parts and original packing.
$150

Diamond SG7900 mobile antenna
w/Diamond trunk lip mount (not the cheezee one)
original packing
$100

Larsen NMO 2/70 mobile antenna, magnet mount
$30

Pyramid PS52K power supply, 52amps, variable voltage, volt/amp meters
$200

I am willing to accept reasonable offers, but remember this stuff was never really used, so don't bother with stupid offer's. All item's are as is.

All item's shipped UPS COD or you pick them up.

206. Hallicrafters SX-28A tips?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-08 02:31:17 UTC
From: jtyburczy@aol.com
Message-ID: <20010707223117.18484.00002421@ng-fa1.aol.com>
Source record: 51600

Finished a recap of an SX-28A, except for the dreaded RF deck.

I wonder if anyone can explain to me about the procedure. There are websites devoted to the SX-28 recap procedure, but none for the 28A. I can see it is very different from the 28's, most notably because of the rectangular "platters" containing the coils and trimmers. The wax caps to be replaced reside beneath these platters.

I experimented with the bottom right platter (it looked easy), first removing the hold-down screws and then attempting to lift it clear. No luck. After unsoldering three wire connections to it, the platter was slightly moveable but still tied by yet another wire - somewhere deep below - and I was not able to lift it clear. At that point I gave up. I put it all back together to re-think the process.

How delicate are the coils and trimmers on these platters? Does a lot of soldering/desoldering work on the coil terminals weaken these old components?

It is clear that this operation requires major disassembly and much tagging of wires and sketching and God knows what else. Is there any tactic, procedure, order or tools you recommend? I am seriously wondering if this receiver was designed by Satan as a means to torture mankind.

Howdy Jep,
Just in case you hadn't considered it, I'd suggest winding and making your own coils, especially seeing as how the dimensions appear to be so easy to jig up. I'm making the assumption that your needed coils are 2-1/2" I.D. so would recommend using any convenient 2-1/2" "TUBING" for a form (tubing is O.D. measured whereas pipe is nominal I.D.)...perhaps a piece of 2-1/2" aluminum tubing might be at hand. Close would be 2" IPS (Iron Pipe Size) pipe...such as a piece of 2" ABS/DWV pipe...its 2.375" O.D. (as is steel pipe etc). Next is your requirements for 6TPI of #12....this just happens to be a convenient size whereas #12 enamel for example is approx .080" (80mils) and translates to 12TPI closewound....so just use 2 pieces layed side by side and when you're finished winding 5" long and secured your form (later) unwind the "spacer" wire! Now for the method of form......you might try waxed or winding type paper on top of your form, and run epoxy along the length in a 3 or 4 passes equally spaced to approximate the old AirDux (this IF you plan on removing the winding form etc), OR, like I've done for homebrew tuners here.....I wind on top of and secure to ABS pipe (leaving a little out each end for mounting) and use as a filler, spagetti insulating tubing....leaving it right in afterwards if you feel inclined. Perhaps you are doing a meticulous restoration job and require the authentic stuff, but I offer this as an example (perhaps to others) that this type of simple requirement can be easily homebrewed.....even today.

Message-ID: <sj_17.94636$2W4.14485750@news02.optonline.net>
Source record: 51609

Hi John,

The supply voltage debate on the 392 has been going on for years and years. It's a tradeoff between how long the filaments will last versus the plate supply. The filaments are rated at around 25 volts, but the plate supply seems to like anything up to and including 32 volts (higher is better ...). The filaments don't last very long at 32 volts.

Given the fun of finding the tubes I'd run the radio at 25 or 26 volts. It's not that the tubes are terribly expensive, they just take a while to track down.

Typically you find them without connectors. A common kluge is to pull one of the fuse holders and run the supply in through the now empty hole. If you have an audio connector by all means use it. If not then you do the same sort of thing with the audio output.

Audio is fairly low power and it's 600 ohm. A 600 ohm to 8 ohm transformer is a very good idea.

Hope this helps.

There are three connectors used on the power cable. One for plate
voltage, one for filiment voltage, and one for ground. The plate and
filiments are normaly jumpered and have 28v nominally. Better results
are gained when running 32v on the plates and 24v on the filiments.
More sensitive and the tubes last a bit longer.

Somewhere I have the few pages that describe it. If you want, I'll try hunting it down. Basically you replace the output trans with a modern, small push-pull center tapped job (and get genuine 8 ohms output in the bargain), and the output tube becomes a 6360 or some number like that -- a dual triode that can hack a couple watts on each plate. And some other tube would have to be reworked into a phase splitter to drive the P-P output.

The sound really is a lot better, with more power reserve. Would be nice to do something like this to the R390 non-A, with its smooth sounding L/C IF bandpass.

Isn't that neat how you can just keep the R390A mainframe, and fill it in with modules as the become available? Mine probably has no two modules by the same maker -- which I think really shows what this radio is all about. --Mike K. AA1UK

>just fine...all the time...eh?

I found the KWM-2 to be a little touchy to tune up. Not difficult, just a few
more steps than the NCX-3, and more concern about drawing too much grid current
on the 6146 final. You have to play some games with the drive setting between
TUNE and XMIT, since the grid current is widely different in the two functions.
I don't think I ever damaged a final, but the rig always made me a little
nervous.

Actually, I commend Collins for the sharp-tuning RF chain that makes the tuning
tight, and I like the way that peaking for RCV and XMIT is the same.

I guess what I really meant to say is that the NCX-3 is simpler to tune up, not
that the KWM-2 is a bear. But it always seemed to me that one mistep could
cost you a 6146. Now that I've played with a Viking II, I'm a lot mroe
tolerant of lots of steps :-)

>Can anybody confirm the tip I got from the seller that more than 28 volts on >the plates increases performance?

The main connector has separate pins for filament and plate voltage, so I (and everyone else, ti seems) has experimented with 24 to 28 VDC on the filaments and then sticking a 5 or 6V supply in series with that to get something in the 30s on the plate.

The extra plate voltage seems to help performance a little bit, up to a point. One thing that limits my R392 is that it came with the solid-state replacement module plugged in the socket of the audio output tube. This saves a lot of heat, and is one less tube to worry about. But this module draws its working B+ partly from the filament line and partly from the plate line. The former means that I can't go cheap and run AC on the filaments, and the latter means I have to be careful with the B+ overvoltage, since too much may pop a transistor.

All the connections you need are on that connector, which mercifully has male pins sticking up. One is common ground, one filament, one B+, and another is 600 ohm audio output. You don't need anything else. Somewhere I have a pciture drawn of the pins you need. I used "carp mouth" stick-on connectors soldered to hookup wire. Maybe Fair Radio still has some mating connectors, but when I checked them out a few years ago, they only wanted to sell the connector along with an R392.

A truly unique receiver -- ugly on the outside, exquisitely beautiful inside. If you like clocks and watches, you'll love it! 73, Mike K. AA1UK

under boatanchors, then R392.

It is possible to "split" the filaments
(which don't want more than 28 volts)
from the plates. Most caps in the radio
are rated at 50 volts, so you don't want
to push B+ too high.

Well, if you're still looking for one, I just happened to have a matchbox, Johnson 250-23, complete and probably original in every way. Yes, I'd part with it - as I was going to do a complete cleanup and put it up on eBay. But it is all there. I opened it up and there is no sign of corrosion other than the bandswitch shaft - it's a bit ugly, but fully restorable with a bit of steel wool. However, the outside of the box is U-G-L-Y! No dents or bent metal, but there's some kind of green stuff sprayed on part of the front, and paint is flaking off here and there on the top and sides. The decal on the back is about 95% there. The input connector is corroded, and I do mean corroded! It's a regular SO-239, easily replaced though. All the screws and stuff are obviously original and in fully restorable (dirty) condition. The knobs are in dirty, but otherwise excellent, condition. No manual or anything wonderful like that.

Now if you're interested in the whole thing make me an offer (private email, don't need to clog up the pipes here). I can provide digital pictures if you want - I'd need to take them for eBay anyway. Yes, I even take PayPal!

And if I don't hear from you soon, up on eBay it goes.

Tony - email to: dowden@clowder.com

247. 6146 Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-09 19:07:39 UTC
From: Tony Angerame <tangeram@lucent.com>
Message-ID: <3B4A00FB.908344A4@lucent.com>
Source record: 51640

Here's one for you tube guys. I have a B&W 5100 which uses a pair of 6146's in the final. Very intermittently the dipped plate current goes way too low. Normally it's 220 ma but it dips to 50 or so. At this point the grid current goes way to high sometimes exceeding 40 ma. Bias, plate and screen voltage all seem OK when this happens. What could be going on? Shorted or open plate blocking or bypass cap? Plate RF choke? Oh and also when this anomaly occurs I get a "Blue Arc" across some of the final tune cap. plates.

TIA Tony WA6LZH

Tony,

Sounds as if the load is being removed. Either bad T/R relay contact or open coax from transmitter to T/R relay. Could also be intermittent open of output coupling capacitor.

Swap the tube out... If it happens again... you've got a part failing or a parasitic oscillation. If it doesn't happen again, the tube has gas or some type of internal breakdown happening.

cheers
skipp

I agree with the other guy that said you were loosing your load. Could be a bad antenna connection or a connector with a broken wire that is intermittent.

Do not let the transmitter on very long in this situation. The screen current goes very high as does the grid current when the load is removed and the plate current is dipped low. You can damage the grid and or screen very quickly. The arcing of the plate tuning cap is common in this situation. Try a dummy load when it happens.

Check for parasitic oscillations. The PA may be breaking into
oscillation in the VHF range. Since the PA tank looks like a
very high impedance circuit at VHF, the RF voltage at the
plate will soar, leading to arcing, etc.

Pete

Of course my main objective is to keep it on the cheap and get started in this hobby before I loose interest. Might take me awhile to save up for a newer rig.

All your advice has been an eye opener. I can tell passions run hot for your favorite (or least favorite) gear. Some day I will likely get a "newer" rig but I am a tinkerer on a budget. So for now I will look to the older stuff. I'm sure I'll learn more that way too :-)

Many thanks to all who replied. So far It's been suggested that I:

1.) Have an open antenna hot connection. (I tapped directly to the coil bypassing any relays etc with a dummy load.)
2.) Have an open output blocking cap
3.) Have a parastic causing oscillation or just a plain ole oscillation requiring neutralization.
4.) Have a bad tube (Already swapped these)

So that leaves an open blocking cap, parasitic or other oscillation. Off to the work bench and many thanks!

Tony,

When the plate current goes low try turning the plate tuning way off resonance and see if the plate current will go way high. It should. If it does not look for a shorted screen bypass cap or poor connection in the screen voltage circuit on the 6146s. Also look at the screen current if the meter will measure it. If the screen current is going high when the plate current is low, then it is something in the output coupling. Unless it is a shorted screen bypass cap, then the screen current meter will read very high. But because you say that the plate tuning cap arcs, I would suspect that you have ok screen voltage.

A short in a loading cap may do this too. Your output variable may have a spot that shorts. Try rotating it slightly. Also check the band switch. It may be arcing/ shorting and causing more fixed loading caps to be connected when they are not supposed to be in the circuit. If the plate coupling cap was bad the plate would not dip.

>Asking $150 + shipping.

I got one of these a couple years ago, and it's my favorit eradio to just switch on and see what's happening on any given SW freq. This Wadley Loop set is a much better radio than Osterman's book lets on. It's a true "porta top" with a huge built-in antenna, unlike the comparable FRG-7 (which probably is a tad more sensitive).

Where the SSR-1 is lacking is in total lack of IF processing -- no selectivities options, no ANL, no notch, not even a tone switch. And no RF gain, though I haven't missed it.

I have no connection with the guy selling this one, nor am I looking to sell mine. Just wanted to say this set is better than you might think. 73, Mike K.

Life is a game. Play to enjoy!

>seriously damage a 6146.

That's reassuring to know, after all the warnings in xmtr manuals about how drawing more than 4 mA of grid current can permanently damage the grids and cause grid emission. I know that I've blown that limit by 2x or 3x more than a few times, including back when I ran a DX-40 and was blissfully ignorant of that warning, and I can't say for sure that I ever spoiled a 6146 that didn't already have gas or some other problem.

> I'll keep practicing, tho. I've got sweep tubes down pat.

I doubt sweep tubes were designed to take the abuses we hams inflict on finals!
For practicing your tube-burning technique:
(1) Keep your eye on the *tube*, not those distracting meter needles.
(2) Follow-thru -- keep tx in TUNE mode till you smell the dummy load.

:-) -- Mike K.

From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tkle3a9h3v2587@corp.supernews.co.uk>
Source record: 51571

FOR SALE Racal RA 218 Sideband Adapter & Fine Tuning Unit.
This Racal accessory was designed specifically for use with the Racal RA117 Receiver, for receiving SSB transmissions.
The unit takes its input from the 100kc's if output of the receiver and converts these signals into the audio components of the side bands.

Also contained in the unit is a Fine Tuner.
This is entirely independent of the sideband circuitry.
The Fine Tuner,which has an output of 1.7 to 1.701 Mc's is used as a fourth mixer local oscillator,when interconnected to the RA117 receiver.

Independent output levels are provided for both upper and lower sidebands.

The RA218 is a self contained rack mounting unit which matches the RA117 Receiver.
The unit uses a total of 12 tubes.
General condition is good,the front panel is undamaged,all control knobs are original.
The unit has been tested and is in good working order.

Sideband Adapters for Racal RA117 receivers rather scarce, which is a pity, as they are a very useful accessory.

Being a matching unit,and, like everything else built by Racal,of high build quality,the RA218 Sideband Adapter & Fine Tuner not only works well ,but looks good alongside the main receiver.

The price of this very useful Racal accessory,which includes the cost of packing and air freight from the UK to the USA, is just $395 US Dollars.
If you would like more information or wish to order,please contact Graham Leo
info@radio-exports.com

Thank you for your interest and time.

278. FS.Eddystone Panadapter EP14

FOR SALE EDDYSTONE PANORAMIC DISPLAY (Tube Vintage) Model EP14

The Eddystone Panoramic Display Unit,Model EP14 is a general purpose display unit, for use with an Eddystone or other receiver having an intermediate frequency in the range 5-60 Mc's.With this unit you can visually examine a spectrum from 1MHz wide down to a spectrum of less than 30 kc's wide.

Signals can be examined in great detail as resolution in the order of 2 kc's is possible at the slowest sweep speeds.

The panoramic display unit uses a green trace cathode ray tube, which is fitted with a hood ,to permit viewing under difficult lighting conditions.The screen is fitted with an engraved graticule for direct measurements.

A built in crystal calibrator gives marker pips at 100 kc's intervals for accurate calibration of the frequency scale.

,selectable sweep speeds, simplify the accurate presentation of widely differing signal displays.

In addition to its main application as a panoramic display unit,the Eddystone EP14 has provision for use as a wobbulator.
It also has many other applications as a versatile test instrument, including frequency measurement,drift checks,and use as a sensitive RF volt meter (20 microamps f.s.d.).

Advanced design,rugged construction and high quality components are used throughout.The unit is even fitted with a blower, to allow prolonged use at elevated temperatures.

The unit employs 15 tubes in addition to the C.R.T. and has solid state power supplies.
Size is 19" wide x 5.25" high x 15" deep and the unit weighs 36lbs.

Condition of the display unit is near mint and it is in full working order.

The price of this hard to find Eddystone unit, inclusive of the cost of packing and Air Freight to the USA,is $495 U.S. Dollars.

If you require further details or wish to order,please contact Graham Leo info@radio-exports.com

Thank you for your interest.

279. FS.Eddystone 740 Communications Receiver

For Sale,early, Eddystone Model 740 Communications Receiver

The Eddystone Model 740 Communications Receiver is an eight tube receiver, dating from around 1950.

Frequency coverage is in four switched bands,viz.,200-600kc's , 1.4 -3.8 Mc's, 3.7-10.6Mc's and 10.5- 30.6 Mc's.

The large semi-circular tuning dial is calibrated with two coloured scales,red for broadcast and white for amateur bands.All scale markings are very clear.
There is also a logging scale and an inset vernier dial,for accurate frequency setting.
Tuning is by the justly world famous Eddystone slow-motion drive and this particular one is silky smooth and a joy to use.

Front panel controls include RF Gain,AF Gain,BFO,Noise Limiter,AGC and Tone.

The receiver is in its original black crackle metal cabinet, which still retains its distinctive "Eddystone Lighthouse" Badge.

The attractive early Eddystone receiver is in good working order.

The price for this fairly scarce model Eddystone Receiver,which includes the cost of packing and of air freight to the USA is just $295 US Dollars.

If you would like more information or wish to order,

please contact Graham Leo info@radio-exports.com

Thank you for your interest and time.

280. FS.Eddystone 770R VHF Communications Receiver

Message-ID: <tklfeanvl64nb2@corp.supernews.co.uk>
Source record: 51574

FOR SALE
EDDYSTONE 770R VHF Communications Receiver

This receiver is a first class example of a high grade Eddystone receiver from the tube era.

Ruggedly built,the receiver uses a total of 19 tubes in a single conversion design,covering a frequency range of 19Mc's to 165 Mc's.
There are six turret switched ranges,viz:-
114-165 Mc's, 78-114 Mc's, 54 -78Mc's, 39 -54Mc's, 27-39Mc's, &
9 -27Mc's.

Provision is made for the reception of CW,AM,FM and NBFM signals.

The large weighted Tuning Knob gives is a joy to use, as is the beautifully engineered Turret Tuner for which Eddystone receivers are justly famous.

Use of the tuning vernier in conjunction with the logging scale gives no less than 2500 logging positions on each range.

Controls include,AF Gain,IF Gain,Noise Limiter,Standby Switch, & Adjustable Muting.

The receiver is fitted with a dual function panel meter indicating signal strenght with AM signals or correct tuning with FM.

The receiver is housed in its correct table top cabinet measuring 17" wide x 9"high x 15" deep.Weight 60 lbs.

Operation is from 100-125 or 195-250 volts ac.

This receiver is in very good,all original condition.It has been tested and is in good working order.
The price,which includes the cost of packing and air freight to the USA is $485 UD Dollars.

If you would like more information or wish to order,
please contact Graham Leo info@radio-exports.com
Thank you for your time and interest.

Suggest you first read the Restoration FAQ at URL:
http://www.3rdtech.com/nick/rrab.faq.htm
Then use a variac to bring up the voltage to the S-40. Also read about reforming capacitors. A long length of wire out the windows -- up in the air should receive signals - particularly on the AM band -- and whether day or night on upper bands.

My S-40B works fine but needed new electrolytics and several new tubes plus alignment as some one diddled with the slugs and trimmmer caps.

Good Luck

Hi John,

Take a look at:

http://antiqueradio.org/checkout.htm

Try to make the dim bulb tester, if you can. These radios had NO fuses from the factory, and if the filter capacitor has shorted over the years, you could ruin your power transformer.

The paper caps are also a big problem. They absorb moisture and partially short. One problem - a shorted coupling cap at the audio output tube will cause the tube to conduct too much current and damage the audio output transformer. There are about a dozen other paper caps in this radio, any or all may be trouble. It's wise to replace all of them.

When you power it up, keep an eye on the largest tubes. The rectifier (an 80) and the audio output (a 6F6G) should not show signs of overheating. That is, the large metal cylinders inside (the plates) should not show any signs of red color. If they do, or you smell or see smoke, or you hear sparking or crackling - turn it off fast!

I don't want to sound discouraging. There is actually a fair chance it will work OK. But you have to be careful. Even if the radio was in perfect condition when it was parked, some inexpensive parts likely have deteriorated and can damage some hard to find parts.

Frank Dresser

The cable is nothing special. The connector is an Amphenol
that Heath also used on many of their ham rigs for mike connectors.

You can replace the connector with a panel mount BNC, and use
RG-58 for the cabling.

Tony:

Sounds like an intermittent in the antenna system which could account for an extremely high swr and resulting sky-high rf floating around in the tank circuit.

I AM HELPING AN OLD FRIEND GET A TR3 BACK UP IN RUNNING AFTER MANY YEARS OF STORAGE IN THE GARAGE. WHEN IN TUNE THE XMITER GETS FULL OUTPUT, AM FULL OUTPUT WHEN SPEAKING INTO THE MICROPHONE BUT ON SSB NO OUTPUT. I ALSO NOTICE THAT IT ONLY TUNES UP ON ONE SIDEBAND. ANY GOOD IDEAS TO POINT US IN THE RIGHT DIRECTION APPRECIATED.

THANKS,

GUNTIER

I had a problem like that, in my case SSB was just a couple watts
Drake told me to change the ALC tube, it did the trick.
>>MANY YEARS OF STORAGE IN THE GARAGE
OUCH !!
Be sure to deoxidize, clean and exercise the switches they HAVE to be a
basket cases by now.

As I recall the tuning up on one sideband is correct for the Drake line.

You seem to have audio through the microphone, and speech amp.

You also seem to have audio through the Balanced Modulator, as the Drake only ran one sideband on AM, as I recall. And just unbalanced the Balanced Modulator to generate low level AM.

Off the top of my head I'd look at the simple stuff first.

1. The rotary switches could be dirty.

2. THe drive pot could be dirty/defective.

Just some thoughts.

Have fun.

303. annoying SX-28 problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-11 05:54:08 UTC
From: joer@davesworld.net
Message-ID: <_RR27.205$R87.30449762@den-news1.rmi.net>
Source record: 51497

I've been slogging through my SX-28, trying to cure any problems, and I've run across one that's got me stumped:

First of all, all the tubular caps have been replaced, and I've checked the resistors and replaced any way out of spec.

The problem is in the 6AB7 first RF amp. The plate voltage should be (according to the manual) around 227, and I just measured it at 296; the screen should be 140, and it's at 221. The manual also calls for 4.15V or so on the grid at pin 4, and it's around 0.5 -- yet, the resistance checks as given in the military manual are fine. The tube also gets enormously hot, and here's the weird part. When you touch the voltmeter probe to the plate or screen pin, the radio gets louder as if you hiked the AF gain up a notch or two. Other voltages in the rig seem to be around normal.

Any suggestions on this one (all will be greatly appreciated!)?

thanks,

Joe W9TXU

Hi folks.

I guess I just got one too many linears, so here's your chance to pick up a beaut. It's a really nice L4B that's clean, works right, and your satisfaction is guaranteed. The power supply has been updated (by someone before me) with new diodes with bypass resistors, new capacitors plus a new glitch resistor, the right kind of course.

The amp itself has a pair of genuine well-matched Eimac 3-500Z tubes, and they test out great on all bands, 80-10. The front panel is the newer design, and all of the controls work smooth and perfectly, including (of course) the power switch.

I don't plan to make a cent on this one, I just hate to see it sit unused. I would prefer a local pickup in Southern NH, but I will ship if needed at your cost. I've got $725 in this thing, and that's my price. You get all the cleanup, testing, etc that I did FREE, plus 10 days to make sure you like it. Manual included.

Please contact me at (800) 962-2949 or (603) 465-2788

Thanks!

It could simply be a bad or gassy tube.
Also, I recall something about the readings in the military manual being
very drastically different from the commercial manual. IIRC, it had
something to do with their using a very low ohms/volt meter.

>I have deoxed the switches and band selector but get no AM.

Is the oscillator working? You can test it with another radio. The oscillator should run about 455kc above the indicated signal on the S-38. So, if you tune a second AM radio between 1450 and 1460 you should receive the oscillator signal as you tune the S-38 around 1000kc. If it isn't working, look for poor connections around the oscillator coil (the one with four trimmer caps). A shorted trimmer cap is also possible. You may need to look at the bandswitch again. By the way, the oscillator runs 455kc below the signal on band 4.

>Dial lamp is not getting full power. The cap it connects to is
>not in good shape. I will replace that.

This cap sounds like the line bypass cap. It's very important that this cap doesn't leak and have an adaquate voltage rating. The original was probably around .02ufd 600V. A metalized film or ceramic disk would be a good choice. Don't expect much from the original wax paper caps. They were troublesome when new, and they're worse after fifty years. I have a couple of this kind of radio, and the dial lamps aren't real bright. A weak rectifer tube will reduce the current through the bulb. If the radio works well otherwise and the resistors around the bulb check out, it probably isn't much to worry about.

Any ideas where to begin?

Rob, I have one like this also,mine has an open RF coil caused by lightning or high RF to the input ..if the radio is connected to an antenna and is setting on the BC band this is a direct path to ground... I plan to take the coil out and attempt to rewind the BC section of the coil,difficult but not impossible..good luck Harold W4PQW

Check the voltages upstream toward the power supply. Maybe there's a shorted or charred decoupling resistor in the B+ line?

Could also be a gassy tube, or even more likely, the tube is oscillating. Check your bypass caps. It's sometimes critical where they're grounded.

If you used disk ceramics, it's possible they're resonant at some VHF frequency. The old paper caps had lousy Q, which was a bit of a blessing in some cases. You may have to move some wires around to eliminate feedback.

As a last resort, plug in a lower gain tube, like a 6SK7. That should stop the oscillation if that's the problem.

330. National Nc-155 dial turns how?

My neighbor has one of these we will be working on shortly.IT uses no dial cord or at least I did not see one.The big tuning wheel turns freely but does not turn the tuning mechanism. It looks like there may have been some kind of rubber? rolling wheel that turned the tuning mechanism. What part am I missing? Any modern day substitutes?

331. Re: Want R-390A Audio Transformer

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-12 13:55:48 UTC
From: "George R. Gonzalez" <grg2@mediaone.net>
Message-ID: <E%h37.7263$GI4.366230@typhoon.mn.mediaone.net>
Source record: 51525

Just My Opinion: but I don't see much reason to mess with the R-390 audio output stage. Many buyers would devalue the radio by at least $100, so why throw away the $$?

If you really need some extra watts,
just tack on an old external mono amplifier, preferably tubes.
I use an old Dynaco 20-watt amplifier with 6BQ5's.

Just My Opinion,

George

Source record: 51527

I am selling my Ten-Tec Omni V station. Consists on the Ten-Tec Omni V model 562, matching speaker/power supply console model 961, desk mic model 705, and remote tuning knob model 301. Every filter slot is filled. Includes the standard 2.4kHz filter, as well as optional model 288 1.8kHz, model 285 .5kHz, and model 282 .25kHz, as well as model 219 .25kHz filter installed in the 9mHz IF. Built in noise blanker and speech processor.
The receiver section of the Omni V is considered by many to be the best receiver Ten-Tec has ever offered. Just back in May from Ten-Tec for an alignment and replacement of internal battery, as well as a complete check up. Includes the original manual, and original cartons. In excellent condition. Price for all: $1200.

335. Re: Instrograph CW Trainer

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-13 00:10:21 UTC
From: "Edward A. Feustel" <feustel@erols.com>
Message-ID: <9ile56kve1@bob.news.rcn.net>
Source record: 51529

I used an instructograph in 1954-55 to get my general license and in 1959 to get my Extra.

As I recall, It used a paper tape that caused a pair of contacts to open and close. It also had a rheostat
that controlled the speed. You put the tape on so that it goes through the contacts to the takeup reel.
You connect a code practice oscillator to the pair of binding posts on the surface of the instructograph.
Then you turn on the motor and set the speed to your liking.

If I recall, the tapes had holes at both the bottom and top of the tape. First you run it one way, then
you turn the tape over, mounting the takeup reel on the sending reel post and vice versa. Rethread the
tape and you are off and running again.

Source record: 51533
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.swap

FOR SALE:
Lafayette HA-225 Receiver in very good condition.

Has general coverage and also bandspread for the amateur bands.
1966 era. Has Five (5) bands: 150-400kHz, 1.6-4.8MHz, 4.8-14.5MHz,
10.5-30Mhz, 48-54MHz

Additional bands for bandspread on the amateur radio bands.

14 tubes: 6AQ8 (6m rf), 6BL8 (6m mix/osc), 6BA6 (rf), 6BE6 (mix), 6AQ8
(Q-Mult/Calib), 2
6BA6 (if), 6AL5 (det, anl), 6BE6 (pro det.), 6AQ8 (af,bfo), 6AQ5 (af
out),
0A2 (reg),
6CA4 (rect)

Interesting design in that it covers all the way up through 6 meters,
and it has the output transformer mounted diagonally to minimize
hum from power transformer.

See: http://member.nifty.ne.jp/hanazawa/radio/lafayette/

Will sell for $95.00 plus shipping

Also have a Lafayette external speaker to go with it.
Model 99-2521 - matches their classic receivers. Excellent condition.

Will sell for $20.00 plus shipping

Pictures available

Takk about memories. For those interested in trivia this
radio was good on 6 meters.. The one I had was like
the picture and the two tube sub chassis (right front in pic)
is an International crystal 6 meter converter. at least the
earlier ones were.They may have made their own later.

"Excess" is the term used in civilian government contractor-ese
for "We don't need this anymore. Get rid of it."
It doesn't reflect the condition. The number tag is some NASA
internal code so you'd need to talk to one of their people.
It may mean "works perfectly" or "piece of junk."
Only they could tell you.

Oh- "Excess" also usually means:
"Stick it in a big pile and let the rain and sun
beat on it for five years before you let anyone else tinker with it."

The "7" is the price (in pennies) paid fior the unit in a bulk purchase from the govt. When multiplied by 10,000 it is the approximate price the taxpayers paid for it when it was new.

"Excess" means that it will likely be sold to someone who already has an excess amount of equipment, but can't stop himself from buying more.

Loren,

My personal recommendation would be for a Kenwood TS520. It offers everything you could want except for 160 meters. It includes power supplies for AC and DC. You can buy a very effective CW filter for it. Back in 1975, when I was faced with a similar decision, I kept a log of stations heard on my HQ180. TS520's were usually 10 or more dB better than Yaesu FT101's. I bought a TS520 and never really looked back. Unfortunately I let the girlfriend talk me into loaning it to her father and I never saw either of them again!

My second choice would be a TS830. Buy the Gold Label version, you won't regret it when you sell it. It has the absolutely best receiver I have ever used.

Personally I would stay away from boat anchors unless you can fix them. Even Heathkits can be a problem here but especially Swans and the like. A newer solid state radio like a TS930 or an Icom IC706 or even better an IC730 make nice rigs.

Thanks to everyone that responded . . the posts set me to thinking and checking around. What I've found is that plate and screen voltages in the entire set are running 30 - 40 volts above what Hallicrafters publishes in the manual and I'm wondering if this is the source of a lot of the problem. Both 6AB7s (IF amp and noise amp) run very hot after just a few minutes. I also found that the 500 ohm S-meter adjusting pot is quite bad.

Another question is what's a good way to check for the presence of AVC voltage -- I know that may be a simple question but I can't quite remember how to do it!

thanks,

Joe W9TXU

Source record: 51467

Congratulations Bill!
You have one of the premier machines used to not only train ham operators (before the "give away" license came into being :)) but also to train thousands of commercial and military radio operators.
Instructographs were manufactured in Chicago and came in both a battery and AC version. Instructographs...just like the one you own, were still being offered in ham magazines by the original company as late as 1970. Every ham and commercial radiotelegraph test that was administered to me at the FCC examination office was always sent using an Instructograph. I understand they then went to cassettes in the late 70s.
You can find ads in QST as they advertised heavily. You occasionally see the original manuals on eBay but copies are probably more economical from manual providers. Ironically they don't command a high price yet. YET!
The beauty if the Instructograph was in its simplicity, as with so many older things. The original Vail/Morse devices used a very similar scheme by punching tape and then feeding it through a switch that made and broke contact. Details can be found in the book, The Victorian Internet (currently available...Amazon, Barnes & Noble etc).
Hang on to your Instructograph and enjoy it, Bill. You have a fine piece of communication history that helped us win World War 2, Korea and populate the commercial telegraph frequencies for years.

ZUT,

Any high impedance voltmeter will measure it. In the old days that
meant VTVM, but even my cheapo DMM will generally read the AVC line ok.

Message-ID: <PZX37.7102$qs5.3561660@news02.optonline.net>
Source record: 51470

Hi,

One alternative is to go to good old Fair and get one of their junk audio decks. As I recall they run about $20. It will have all the stuff on it for the audio mod except J-xxx which they will sell you as well. Modify the new deck to what ever condition you wish. Keep the old one in it's original state. If and when the radio ever sells you have increased the value of the deal by far more than the price of the junk audio deck.

Also - just an opinion ...

Bob Camp

> Just My Opinion: but I don't see much reason to mess with the R-390 audio
> output stage. Many buyers would devalue the radio by at least $100, so why

From: "owen.home" <owen.home@ntlworld.com>
Message-ID: <1tZ37.39612$B56.8226891@news2-win.server.ntlworld.com>
Source record: 51471

Hello
I've just bought an old and not very pretty Marconi CR100 from a local ham charity auction and wonder if anyone had any comments or information on the set, I can't find many references to it so I'd be grateful of any links to history, age etc that anyone knows of. The cabinet needs a complete respray - it's currently has dark grey over an original lighter grey - Marconi grey? although I've seen the later B28 in blue. The panel legends are screen printed not engraved so how would you suggest I restore them after the respray? I can't tell what version it is because the ID plate is missing but it doesn't have an S meter as some seem to have.
Electrically it's not working and has a fault around the first RF amp, quite a few components have been replaced including the mains transformer but I'll work on it once the manual arrives as I haven't got anything else that goes down to LF (60kHz).
It doesn't feel to have the quality of other sets of it's vintage because it's all sheet construction with no castings involved although an old timer at the auction told me that they were good sets as I lugged it to my car -I realise now that he would have been a good source of information but I was otherwise occupied!
Any information would be welcome,
Thanks

John
PS it has a small "official" modification panel inside the chassis, it's a small metal panel with a VR54 = CV1054 = EB34 double diode valve (tube) and toggle switch next to it, the panel is marked AP56703 so is obviously a military mod, any ideas? could it be a noise blanker/ limiter

If the tubes were running "hot" due to excessive current draw,
the plate voltage and screen voltage would be lower, not
higher... Did you check the voltage drop across the cathode
resistor to measure the tube bias points?

Are the screen, plate and cathode resistors close to the
correct values?

What is the impedance of the voltmeter you are using?

For the AGC voltage, check the agc bus using a scope, DVM
or older analog VTVM. It must be read with a high impedance
meter to prevent loading.

Pete

You may want to check any silver micas in that stage. The last sx-28 I worked on had a shorted coupling cap between stages. Silver migration is a real problem with these old silver micas if they have any dc on them (coupling service between stages). Even if they check open on a ohmmeter they can still be leaky with dc applied. Try checking them with a good capacitor analyser.

381. BoatAnchor Manual Archive (BAMA) update

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-14 16:54:39 UTC
From: "Kenneth D. Grimm, K4XL" <kgrimm@adelphia.invalid>
Message-ID: <kbt0lto8d53j443u24dedd6uuj4gimjig5@4ax.com>
Source record: 51474

Thanks to the efforts of many supporters, BAMA continues to grow at a fairly steady pace. The following manuals and other information have been added to the free BoatAnchor Manual Archive in the last few months. These and several hundred more can be downloaded from the BAMA web and ftp sites. http://bama.sbc.edu or ftp at bama.sbc.edu with anonymous login and your email address as the password.

I'm constantly getting requests for solid state gear manuals and also offers of manuals for such modern stuff. I simply cannot afford to take on a major expansion of the BAMA site. Clearly, there is a need for another site with solid state manuals for downloading...perhaps a SkiffAnchor Manual Archive! How about it? The need is there and only partly being filled by the folks at http://krasnodar.online.ru/hamradio/sch.htm Someone with a little extra time on their hands and access to a decent server should take this on. I would be happy to help get it started, but just can't take it on as an expansion of BAMA. Sorry.

If you are having problems with BAMA, it may well be due to the fact that you are using Microsoft Internet Explorer. While a similar problem was solved once before, it seems to have reappeared after our ftp software was recently updated. We may be able to get it fixed, however, if you are in a hurry, I would recommend that you use your favorite FTP program and go directly to the files. If you must use a browser, you should find a substitute for Internet Explorer. 8*)

In addition to the manuals, you may be interested in the neat "Voltage Reduction" article by Ed Richards, K6UUZ. It's a fact that the "standard" voltage that we get out of the wall outlets has been increasing over the decades. The increased voltage results in too rich a diet for some of our most prized BA's. Ed has given us a simple solution that can be built from parts in your junkbox or from Radio Shack and Home Depot. Check it out at http://bama.sbc.edu/voltagereducer.htm

Finally, before I get to the list, if you upload something to the BAMA uploads directory, please, please, please send me an email telling me who you are and what you have uploaded. Otherwise, I can only credit the "unknown contributor" as you will see in the last item on the following list.

Neat stuff added to BAMA:

AEA Isopole. Manual. Compliments of Ian Webb, K6SDE.
Astatic D-104 microphone and amplified grip-to-talk stand, T-UG8. Compliments of Joe Counsil, KB0FPD

B&K Dynamatic 375 VTVM including the AE-1A and PR-38 RF probes. Manual. Compliments of Mark Rehorst.
Ballantine 300D VTVM. Manual. Compliments of Lance Benner.
Ballantine 300H-U7 VTVM. Manual. Compliments of Lance Benner.
Ballantine 310A VTVM. Manual. Compliments of Lance Benner.
Boonton Q Meter Type 260-A. Manual. Compliments of Lance Benner.
Breting Model 12 Riders schematic from Dave Hollander, N7RK.
Drake TC-6. Manual. Compliments of Garey Barrell, K4OAH.
Drake SPR-4. Improved schematic. Compliments of Keith R. Erickson and sent to BAMA by Ian Webb, K6SDE.
East German receiver RFT EKN-3. Manual. Compliments of Christof Proft.
East German receiver RFT 1340.15. Manual. Compliments of Christof Proft.
East German receiver RFT T-188. Manual. Compliments of Martin Faust, DK9QT, previously listed under VEB.
Eldico SSB-100 MIL Transmitter. Manual. Compliments of Mark Foltarz, KA4JVY.
Elenco SS-75. Manual. Compliments of Lynn Fisk, K5LYN.
General Electric YCW-1 Capacitance-Resistance Bridge. Manual. Compliments of D. L. Barnhart.
Gonset G-50 transceiver. Manual. Compliments of Walt Szachara, W2OKF.
Gonset GR-212 receiver. Manual. Compliments of D. L. Barnhart.
Gonset GSB-101 Transceiver. Manual. Compliments of Mark Foltarz, KA4JVY.
Gonset GSB-100 Transceiver. Manual. Compliments of Mark Foltarz, KA4JVY.
Hallicrafters R-42 "Reproducer." Schematic. Compliments of Ken Ketner, KA5ELD.
Hallicrafters S-38. Digitally enhanced version ofschematic. Compliments of Michael E. Groome.
Hallicrafters SR-75. Manual. Compliments of John H. Bauer, W4AWM.
Hammarlund HQ-100 Receiver. Manual. Compliments of Ron Martinmaki, W9EOA.
Hammarlund SP-600. Revised version (April 2, 2001) of SSB Adapter by David Snelling.
Heath GR-54 SWL Receiver. Manual. Compliments of Ed Price, WB6WSN.
Heath HW-32. Partial Manual and mod sheet. Compliments of Ron Martinmaki, W9EOA.
Heath O-11 Oscilloscope. Partial manual. Compliments of Ron Martinmaki, W9EOA.
Heath SB-620. Updated material. From Ken Kaplan, KB7RGG, Jim Shorney, NU0C and Jan-Martin Noeding, LA8AK.
Heath SB-620. Scan of graticule. Compliments of Jim Shorney, NU0C.
Heath SB-620. Schematic in one file. Compliments of Jim Shorney, NU0C.
Heath SG-8 Signal Generator. Partial manual. Compliments of Tony Uvino N1RUR.
Heath T-2 Signal Tracer. Partial manual. Compliments of Rick

Williams.
Heath T-3 Signal Tracer. Partial manual. Compliments of Tony Uvino N1RUR.
Henry Tempo 1 transceiver. Manual. Compliments of Joe Counsil, KB0FPD.
Hickock 4956 VOM. Manual. Compliments of Bob Kulow, WA2UEH.
Hickok 695 TV-FM Alignment Generator.ï¿½ Manual. Compliments of Rick Williams.
Hustler 4-BTV Antenna. Manual. Compliments of Robert Dunn, KD7HRN.
Hy-Gain 18-HT-S Hy-Tower antenna. Manual. Compliments of KMA Antennas
Hy-Gain TH6DXX. Manual. Compliments of Gary Fender, W5UUO.
Industrial Instruments L-7 Megohmmeter.ï¿½ Manual. Compliments of Lance Benner.
Johnson VIKING II. Missing pages added to assbly. man. Compliments of Yves Dussault, VE2ATD.
Knight-Kit Star Roamer receiver. Complete Manual. Compliments of Ed Lambert.
Magnum 6 Speech Processor. Manual for Drake version. Compliments of Walt Szachara, W2OKF.
Magnum 6 Speech Processor. Manual for Collins models. Compliments of Bob Crawford, K8VFV.
Marconi CR300 receiver. Partial Manual. Compliments of Jan-Martin Noeding, LA8AK.
Marconi CSR5A receiver. Redrawn schematic and data. Compliments of Denis Chouinard, VE2DSH.
National. Booklet on HRO 1935. Compliments of Dave Hollander, N7RK.
National. Australian version of the HRO (R.A.A.F. AR-7). Manual and photo. From of Andy Gluis, VK5AAQ.
National NC-44. Manual. Compliments of Dave Hollander, N7RK.
National NC-190. Improved ver. of prior upload of Manual. Compliments of Scott McDonald, KA9P.
National RAO-2. Manual. Compliments of Bob Kulow WA2UEH.
National RBH-1. Manual. Compliments of Bob Kulow WA2UEH.
Nye Viking RFM-003 and RFM-005. Manual. Compliments of Bill Coleman, N2BC.
RCA BTA-1R1 1 KW AM transmitter. Manual. Compliments of Mark Foltarz, KA4JVY.
RCA AR-88 receiver. Manual. Compliments of Richard Brunner.
RCA AR-88ï¿½ S-Meter. Info sheet. Compliments of Russ Hunt, WQ3X.
Shure 737A Crystal Microphone. Instruction sheet. ï¿½ Compliments of Bob Bethman, N0DGN.
Siemens e309 receiver. Manual in German. Compliments of Christof Proft.
Siemens e310 and e311 receivers. Manuals in German. Compliments of Christof Proft.
Swan 350. Manual and SB Selector Mod.ï¿½ Compliments of Jerry J. Ingordo, KC2HAE.
Trio-Kenwood TS-510 External VFO-5D. Manual. Compliments of Claude Evrard, F5HSH.

Triplet 630-PL Volt-Ohm-Milliammeter. Manual. From an unknown contributor.

Thanks very much to the generous folks who have contributed their information to the BAMA collection.

Hi Gang,

I have a Hammarlund HQ-140-X
"Technical Description & Operating Instructions"
manual for trade.
It's in very good to excellent condition, 9+ out of 10.

I'm looking for a similar manual in similar condition
for a Hammarlund HQ-129X.

Anybody want to trade.

73,

Ron

High, Ron. I don't have anything to trade but if you sell it,
please let me know. I have an HQ-140-X I use here and would like to
have a good manual. Thanks.

385. BAMA "Needed" list.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-14 19:59:13 UTC
From: "Kenneth D. Grimm, K4XL" <kgrimm@adelphia.invalid>
Message-ID: <fn81lt85qc5lv61f52jldsdq8u3epd92r4@4ax.com>
Source record: 51478

As you probably know, BAMA, the BoatAnchor Manual Archive is a cooperative
effort to preserve and make available the documentation for old tube type amateur radio and SWL equipment. All of the material in the collection can be downloaded for free. However, the success of BAMA depends on the willingness of BA enthusiasts to share their materials with others. BAMA welcomes manuals for any tube type amateur or swl gear. However, the following have been specifically requested. If you
can help, please let me know.

Aerovox model 76 cap./res. bridge
Ameco TX-86
AVO Valve Tester
B&K 281 Multimeter
Boonton 202 H signal generator (VHF) and 260AP Q-meter.
Central Electronics MM-1 and DQ (Q-multiplier).
Dentron GLA-1000C
Eddystone 840A Receiver
Gonset 3089 VHF Amplifier
Hammarlund Model E Signal Generator
Heath HW-12 and HW-22
Heath GR-64 and GR-78 Receivers
Heath HD-1422-A Antenna Noise Bridge
Heathkit amplifiers KL-1, SB-200, SB201, SB-220, SB221, SB-1000
Hickok 610A Tube Tester and 1890 Transistor Tester
Howard 435, 436, 437 receivers, 650 preselector and 660 freq. monitor.
Hughes-Mitchell X-EC Frequency Control
Johnson Viking II Assembly instructions
Johnson Ranger II Assembly instructions
Johnson Desk Kilowatt
Lafayette HE-10 Receiver
Millen 90921 Scope Sweep Amp.
Morrow PW-75
National RAS series
Pace 2m Communicator II
Panoramic SB-3 (civilian version of BC-1031C)
Precision 202 Signal Tracer and 960 Diode and Transistor tester
RCA WT110A card type tube tester
RCA AR-88LF Low frequency receiver
REDI-KILOWATT keyer model 401
RME-50, RME-99 and RME-6900 receivers
Sprague TCA-1 Capacitor Analyzer
Stancor 10P Transmitter

Superior Instruments 650 and TW-11
TMC SBT-350 Transmitter

If you can help with scans of manuals for this equipment or any other tube type amateur radio equipment or short wave receivers, please drop me an email.

Thanks very much.

386. WTB Hammarlund HQ-215 Filter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-14 20:13:27 UTC
From: Phil Beautrow <kg6kb@gte.net>
Message-ID: <HJ147.2324$JX4.316262@paloalto-snr1.gtei.net>
Source record: 51479

I am looking for the Collins mechanical filter that fits in one of the slots
of the Hammarlund HQ-215. Their part No. is 2723-01-00001. It is the 6.0
kHz for the 455 kHz IF.
Any leads appreciated.
Thanks,
Phil

387. F.S. Radio stuff and Books

http://www.jps.net/jonnysocko/IMG_osc5.jpg
http://www.jps.net/jonnysocko/IMG_osc6.jpg

4. HP 1206B Oscilloscope. In good condition and working. $50

http://www.jps.net/jonnysocko/IMG_HP1206B.jpg

5. 1920s Steinite 261 in very nice condition. Needs elec. restoration. All tubes
included. $75

http://www.jps.net/jonnysocko/IMG_261.jpg
http://www.jps.net/jonnysocko/IMG_2612.jpg

6. Very nice EICO 667 tube tester. W / manual $75

http://www.jps.net/jonnysocko/IMG_0197.jpg

7. Sprague Twist Loc Lytic Caps for power supply restoration NOS. Make offer.

http://www.jps.net/jonnysocko/IMG_0207.jpg

8. HexAcon 350Watt Soldering Iron. Excellent shape in original box.

http://www.jps.net/jonnysocko/IMG_0198.jpg

Books:
All are in very good shape.

1. Radio Mfgs. of the 1920s by Alan Douglas (small crease on back cover) $12
2. Old Time Radios "Restoration & Repair by Joseph J. Carr $12
3. Electronic Techniques and Shop practices and construction. Third Edition. Excellent resource! $20
4. The Radio Manual 2nd Edition 1930 by Sterling. Excellent cod. Some writing inside. $15
5. 1992 World Radio TV Handbook $5
6. NRI Radio TV Electronics Dictionart $5
7. Archer Building power supplies by David Lines $5
8. Resistor-Transistor Logic 1973 by Lancaster $5
9. Electronics Made Simple 1965 by Jacobowitz $7
10. Radios By Hallicrafters 1st book. Dachis. $15
11. Shortwave Directory by Bob Grove $8
12. Aeronautical Freq. Directory by Coburn $8
13. Amateur Radio Encyclopedia by Gibilisco W1GV. $12
14. Golden Classics of Yesteryear by Dave Ingram, K4TWJ $5
15. Radio / TV Interference by Hughs VE3DQB $5
16. TEK SC502 Oscilloscope Manual. Excellent Reprint with spiral binding. $12

391. FS: Argonaut 515 system

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-14 21:54:22 UTC
From: JIM RUNGE <k6jr@arrl.net>
Message-ID: <99347.3609$Sy2.1221682@nntp1.onemain.com>
Source record: 51484
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

I have a complete Argonaut 515 system for the collector. It includes the following:
Argonaut 515 transceiver, 208A CW filter, 234 Speech Processor, 206A calibrator, 210A Power supply, 645 Keyer and 705 Microphone. It is in very good condition except the mic needs a new foam wind sock. I will sell the complete system for $630. I will not split it up. You can reach me at 760-323-4464 or k6jr@arrl.net

392. Re: Marconi CR100

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-14 22:37:24 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <9iqimbhuj1@neptunium.btinternet.com>
Source record: 51487

If the modification is associated with the 2nd (audio) detector
then its a two-diode noise limiter. The simple cct can be found in
old radio hanbooks. From my own experience it really does work on
ignition noise.

I used ex-military CR100's way back in 1950's as sensitive mobile
laboratory measuring instruments. Very nice performance. But I
can't remember any circuit details. Along with standard attenuators
and a 10-watt signal generator it was possible to make measurements
down to -100 dB to within 0.1 dB, and down to -160 dB within a
couple of dB. After that things went haywire.

We also used them as impedance bridge detectors up to 5 or 10 MHz.

In the model I used, the IF transformers had a ganged variable
bandwidth, controlled by a rotary switch from the front panel. I
vaguely recall the narrowest bandwidth had a quartz crystal circuit
in it somewhere. Does your model have that facility ?

You realise, of course, you should renew all the tubular paper
capacitors.

401. Hallicrafters SR-150 in Detroit

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-15 02:30:53 UTC
From: TooManyTubes <kb8tl@yahoo.com>
Message-ID: <tl203j2fv5on96@corp.supernews.com>
Source record: 51395

Anyone interested in an SR-150 Hallicrafters transceiver in the Detroit area?
My neighbor's father asked me about disposing of it and I guess this is the place to try. You will have to pick it up or arrange to have it picked up.

The radio has the AC power supply, it receives pretty good and puts out about 50 Watts. I worked a few people with it USB and LSB and got good reports. It is slimy with tar/nicotine and probably needs alignment and a few tubes. Cosmetically, needs serious cleaning but very few nicks, etc. Missing the RIT on-off knob but otherwise all there, but no books. Info available on the BAMA site. No modifications that I can see.
He won't set a price so maybe I can just send interested parties his phone number....when I get it. He is not a ham, but somehow ended up with this radio several years back and is now cleaning out his basement.

Remember that you are plugging a 110 volt rated device of yesteryear
into a wall outlet that produces about 120 volts today. That increase
of about 10 volts, after it is "transformed," will closely approximate
the difference that you are seeing between your measurements and those
indicated by Hallicrafters when they prepared the manual. If you have
a Variac on your workbench, dial it back to 110 volts, plug your
Hallicrafters into that and then take your measurements.

If this solves the problem, you might like to have a look at
http://bama.sbc.edu/voltagereducer.htm for a permanent solution
devised by Ed Richards, K6UUZ. This gadget will provide a mains
voltage closer to what your old gear expects.

Good luck with your trouble shooting.

403. Estate find-Collins, Hammarlund, and Westrex equipment

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-15 07:12:27 UTC
From: Dale Powell <powell@mosquitonet.com>
Message-ID: <tl2g4g1ajedqe3@corp.supernews.com>
Source record: 51397

Does anyone have any information about a Collins 51M6 VHF set? Not sure if it is a receiver or transceiver and have not been able to find it at all on the Collins websites.

Also looking for information about a Westrex 49 receiver. I found a rack with 2 of the Westrex 49's, the Collins 51M6 and a power supply or something on the bottom.

Also found was a Super Pro and a HQ-120, these I am familiar with.

Thanks!

My SX-28A manual specifies the operating voltage as being
110 to 125 VAC. But, the test voltages are indeed mentioned
as being referenced to 110VAC.

Hi.

I have just obtained the following gear.

Murphy (of B40 etc. fame)
Type 100333 Transmitter
Type 100335 Receiver
Type 100336 Power Supply.

This was , I think, mainly a shipborne setup used by the Royal Navy.

Can anyone give me some info as the age of this gear, what type of ship
used them and when they were withdrawn from service..?

Thanks.

Keith

Hi George:

I added a product detector quite easily to the 4350 a number of years ago.

Look in the old handbook and early ARRL SSB handbooks. They have a circuit using a dual 12AU7 or 12AT7. Switching to the external 4301 provides all of the switching needed. I mounted mine under the chassis. However, you could do it externally, using a separate bfo.

I used the switch ot switch detectors and ran the bfo into the producti detector.

Sounded quite nice.

The 4301 is a product detector/SSB slicer with built in speaker. Almost any slicer will do if it matches the IF. Look on the bama web page for a schematic/manual for the 4301. The 4301 works with the 4300, 4350, and 4350A.

Reg
Thanks for the reply, the set does have variable bandwidths down to 100c/s
but I don't know how it's achieved as I haven't got the circuit yet, there
doesn't seem to be much information around for the set - I can't even find
when they were made or how many versions existed.
Do you recall if the ones you used had an S meter? mine doesn't also there
is a toggle switch to the left of the main tuning knob which isn't marked -
any ideas? - it's been replaced at some time so may be a Standby switch
which had a lot of use, there are 2 aerial inputs which are large push fit
coaxial types with ~4mm centre pin marked A & D which I assume may be Aerial
and DF for a loop input? I know later ones like the CR300 had an RIS input
(Radar suppresion) but not this one.
The set isn't very pretty and doesn't exude quality with sheet construction
and no alloy castings involved so they may not have been very popular or
considered worth keeping.
I'll just have to wait for our "first class" post to eventually bring the
manual which should reveal all.
Thanks
John

Dave,

You might try Clif Holland at AVVid in Irving, TX. AVVid is
an authorized Kenwood and Icom repair shop. I don't know if
Clif would be interested in working on something that old,
but it's worth a try. http://www.avvid.com

Source record: 51432

OK guys, what's the easiest way to do this without stripping down the whole radio?

I've managed to remove the little nut that covers the endpoint adjust hole but can't seem to get anything to turn inside the hole (I've cut down some tuning wands, stuck 'em in there, and tried tuning using a needlenose pliers on the wand). Perhaps there's another screw inside there that covers the adjustment slug??

Thanks and 73 - John

Message-ID: <9iv9km$3lq$1@uni00nw.unity.ncsu.edu>
Source record: 51355

I am looking for a 600M marine radiotelegraph transmitter, of relatively late vintage, somewhere around the gulf or atlantic coasts of the US. Ideally, the SC/NC/VA area would be best, to minimize shipping costs.

Optimally, I would like to find the transmitter decks, and the synthesizer deck. One of the ITT Mackay sets would be a good choice, before they all go down into the deep six. If anyone knows of something like that floating around, do holler. A couple years back, I missed one off a passing cargo vessel, that dumped it into the Gulf off Mobile, before they docked. DRAT!

Thanks!

From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <9ivdg6gof1@neptunium.btinternet.com>
Source record: 51434

There was no S-meter. There was no meter of any sort on the front panel. Just the tuning dial.

As I recall they were 230VAC 50c/s operated only which is rather restrictive. We modified them to be used with lead-acid HT batteries. This made them much more stable when used as bench measuring instruments.

All sheet-metal construction and no facilities to bolt to anything meant they were not intended for operating under battle conditions. Too big for tanks and aircraft. Substantially built but hardly battleship style.

I would think they were intended for base-station receivers, just sitting on tables and benches. They were the sort of receiver used in wartime for monitoring foreign and enemy radio transmissions, receiving and decoding secret messages, etc. The variable bandwidth IF indicates a high-class receiver intended to cope with arduous conditions.

GPO and Cable & Wireless receiving stations may have used them for ship-to-shore work and over such early radiotelphone Empire routes as London-Delhi, Delhi-Singapore, Hong Kong-Melbourne, etc. Long-distant telephone circuits were all via radio until about 1957 when the first transatlantic telephone cables came into use.

Is there anybody who can fill in the above guesswork with facts about who used the Marconi CR100

I used to have the original Marconi manual for the CR100 (now gone to another owner, alas...) but from memory, these were made in considerable numbers for the services. There were 4 variants: CR100, CR100/2, CR100/4 and CR100/5. IIRC the CR100/4 and /5 had only 1,000 Ohm headphone o/p, the others were 3 Ohm. The CR100/2 had a mute facility.
It was, I think, never regarded as one of the great sets, I recall poor stability on the higher bands, and image rejection only about 25dB on the highest. Probably few were kept as there were better surplus sets around.

Selectivity is by LC circuits for the wider bandwidths, and a single xtal and phasing caps for 1200c/s to 100c/s.
Antenna terminal "A" is connected to the top of the input tuning coil via a cap, and is for a high-impedance antenna. Terminal "D" is connected to a link coil on the input and is for a dipole.
I've never seen one with a factory fitted "S" meter.

I've got a couple of these that I am getting round to restore at some
time. Lots of other things in the pie line. I note that you have
ordered a manual, if you have any problems I do have an original marconi
one floating about. The mod inside is a noise blanker. If was actually
a production item, just depends which version you have.

The CR100 has RIS on a number of the variants. You could also see front
panels printed for things like RIS but not actually have the input
circuits in place!!!!.

I have a fair stock of bits which were given to me to go towards my
rebuilds. If you want any bits then you can have them for the postage,
they were free to me so they are free to any deserving cause - such as
doing up an equivalent set.

I am considering making up a screen to re-print the front panel on these but I am a bit uncertain as to what to use as the ink.

Cheers

Robin

I am needing a couple of mic plugs that will fit a Gonset or Drake with 3 terminals so that it can be used with PTT. This is smaller than a standard 1/4" plug. Measures about .210".
Email if you have a couple for sale or know of a source where I can buy them.

Remove "nospam" to reply

Thanks,
Mark

Mark,

Mouser carries at least a straight plug version, both shielded and plastic, 2 and 3 conductor. They have the jacks too. They are on page 136 of their catalog which can be viewed in Adobe Acrobat (PDF) format at

http://www.mouser.com/catalog/cat_606/136.pdf

I hope this helps.

73, Rob, KD7HRN

Mark,

Just an aside. Mouser is a great company to do business with. I orderd $20 worth of components for a receiver I am working on and three 22 cent resistors were backordered. They called me long distance, told me what the expected delivery dates were and were going to ship each resistor individually. This is typical great customer support from them. I told them to cancel the resistors since it would cost 10 times what they were selling them for to process and ship and I need them to stay in business but they were more than willing to fulfill my 22 cent orders to keep me satisfied. I have had similar experiences in the past. I don't have stock in this company but it is this type of service that represents the best in business today and makes me a loyal customer.

Let me add to this. I too have had excellent service from Mouser for my
small parts orders. Its advisable to check stock (online) before
ordering so you don't get individual boxes containing a single part
every day for the next two weeks and having to pay the postage and an
extra buck service charge. Also ask them to ship complete and notify
you of any backorders that may take over, say, 2 weeks. My orders are
sometimes 100 line items and these suggestions came as a result of
problems encountered in that respect.
Oh, they have a tendency to bill postage in one pound increments if you
specify Priority Mail on the original order!. I have some of those $4
resistors here!

-Bill

451. Re: RME 4350 Owners

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-17 00:51:10 UTC
From: n2ey@aol.com
Message-ID: <20010716205110.17760.00001221@nso-fm.aol.com>
Source record: 51344

If anybody needs to know what's inside the phase shift network used in the 4301, here it is:

From Pin 1 to Pin 4: 2430 uuf cap in parallel with 133K resistor
From Pin 3 to Pin 4: 4860 uuf cap in seriesl with 94K resistor
Pin 2 has no connection
From Pin 5 to Pin 6: 1215 uuf cap in series with 94K resistor
From Pin 5 to Pin 8: 607 uuf cap in parallel with 133K resistor
Pin 7 is metal shell (ground)

Note that the capacitors are all even integral multiples of each other. I don't know how this unit was supposed to be used.

While we're at it, here's what's inside a B&W 2Q4/350 (that thing in the old phasing exciter articles that looks like a 6J5):

From Pin 1 to Pin 2: 680 uuf cap in series with 487K resistor
From Pin 2 to Pin 3: 430 uuf cap in parallel with 770K resistor
Pin 4 has no connection
From Pin 5 to Pin 6: 680 uuf cap in series with 125K resistor
From Pin 6 to Pin 7: 430 uuf cap in parallel with 198K resistor
Pin 8 has no connection

No precision is specified, but with 1% resistors and 5% capacitors readily available, it should not be too hard to get close enough. Note that there are only two capacitance values.

In most designs, Pins 1 and 5 are connected together, and Pins 3 and 7 are connected together. Balanced audio from the secondary of a plate-to-line transformer feeds Pins 3 and 5, and output to the grids of the audio stages is taken from Pins 2 and 6.

They could be operated from battery using a rotary converter for the
HT, there was an internal switch to switch the heaters to battery
operation. (Why? I would have thought a 6V battery would run the
heaters ok...)

Probably true, they have that look about them.
When my friend was training to be a marine operator in the '60s, the
college in Liverpool had several of them.
They were considered obsolescent then...

Need a couple of connectors for an old RCA Institute
signal generator... These are 5/8" round female
plugs with a single center connector used on the
probes to be connected to the signal generator. The
male connector on the signal generator is pretty much flat
across the front with the center connection just a bump
of solder. I need 2 of the plugs. Anyone have any in
the junk box??
Jack, W5EB

John,

Before you try to turn the slotted coil adjustment, you will need to loosen the concentric lock nut. It is slotted and requires a special tool to get at it. If you have the manual, there are drawings of the adjustment tools.

I have a 4 by 1 deck for sale- 10-80 meters in a Bud cabinet ready to fly ie you put b+ on it. I didnt build this one- its about 20 years old but does run. Nice tank and c1 and c2s in it. Looks ok but could be easily real nice with a new front panel and meters. prefer pickup near Boston-may possibly ship too. Best offer

Classic 50s/60s -Gonset Commander Transmitter-- 50 watt am/cw mobile rig, paper work, cables, very decent shape- $75.00

Henry 4K Ultra plate transformer in VGC- $200 + ship-(a bit heavy-hi!)

Kenwood 2570, box, mic, unused mobile bracket, was rebuilt by Grotin Authorized Kwd service ie new final and driver modules plus alignment.Great 2 meter receiver and puts out 70 watts. Has tone and memories. $200.00

BC348 M --nice- many new caps, built in ac- $200.00
Have too many projects and not enough time so trimming down the collection-73s and thanks- Lew K1NDV

FOR SALE
RACAL RA17L Receiver REBUILT by RACAL.
We have one only,Racal RA17L Receiver,which has been REBUILT by the original manufactuer (RACAL).
This is a rare opportunity to acquire a really fine example of this highly respected HF receiver.As you would expect,the performance is superb and the cosmetic appearance of the set is excellent.Included with this receiver is a copy of the manufacturers very comprehensive handbook.We can supply this receiver,either for rack mounting,with a louvered aluminium dust cover, or alternatively, as a table top set, in a high grade, original Racal Cabinet (quality heavy duty construction,louvered sides,lift up lid,slide rails,etc.).
Price, as a rack mounting receiver is $945 or, if supplied in a Racal table top Cabinet $1095.Please note these prices are inclusive of very thorough packing to ensure safe transit and also inclusive of Air Freight to the USA.
If you would like more information or wish to reserve this fine receiver,please contact:-
Graham Leo info@radio-exports.com
Thank you for your interest.

Good luck, I been looking for 3 years.(I have minor peeling and
discoloration on the left edge)
It turn's out most from scrapped sets are cooked and peeling worse.
No one makes a replacement dial glass, these are good cheap radios.
I put some dogbone NPO caps in the oscillator (more stable) as well as a
3:1 reduction drive

Bob....what'cha gonna do with one of these? Thinking of going on 600?
I wrote ARRL some years back asking that they petition FCC for amatuer
allocations on MF, was wondering if you'd heard anything about that band?

We dont always get the info we should here in MT.

I've got the LF mod for my ART-13 that'll go down to 260 kcs, so was
thinking that'd work good for the old maritime band.

Source record: 51376
Cross-posted to: rec.antiques.radio+phono,rec.radio.swap,rec.radio.amateur.boatanchors

I have a RCA TMV-132-A, which is a Universal AC Bridge Serial #998 (inductance/capacitance/resistance measurement device) runs on 110 ac, seems to be from the 30's, 40's or 50's.

Can someone give me a good guess when it was made? I can't find any date on the inside or outside. It tested OK a loonnnngg time ago (back when Nixon was president) but haven't plugged it in since 'cause the power cord has deteriorated too much.

Where would be a good home for this thing? Or is it not worth anything?

I also have a Setchell-Carlson #591 receiver which seems to cover 200-400 KC...was this used in aircraft? Would there be any interest by anyone for this? (vacumn tubes are missing)

Thanx for any info.

Stan.

Message-ID: <Gh457.52026$qs5.9250408@news02.optonline.net>
Source record: 51367

I own a CR100/8 in excellent, original condition.
According the manual, there are a number of variants, from the "plain" CR100 (prototype) to the CR100/1 through CR100/8.
None of the CR100's were ever fitted with S-meters.
The CR100/4 had an "R.I.S." knob on the upper left corner, to adjust a blanking circuit in the receiver to the repetition rate of the radar on the ship to blank the radar interference .
The CR100/1, /4, /5, /6, /7 and /8 were also called the Admiralty Model B28 receivers. The CR100/2 was also called the R.A.F. type R1297 receiver, as it was issued to the R.A.F. and the other services, except the Navy.
The small metal panel with a VR54 = CV1054 = EB34 double diode valve and toggle switch next to it, with the panel marked AP56703 (AP= Admiralty Pattern) is a noise limiter circuit and it is a definite identifier that you have the CR100/8. If you also had the R.I.S. knob, it would have been the CR100/7 model.
The toggle switch to the left of the main tuning knob is not original - it must have been added by the previous ham owner(s).
The B28 were the standard MF/HF receivers on the Royal Navy and Royal Canadian Navy ships in WW2. After the war, they were phased out and were replaced by mainly the Murphy B40 receivers in the RN, whereas in the RCN around 1943 they started to replace them with the Canadian Marconi CSR5 receivers.
Some B28's were blue (CR100/4) but the standard colour is a light "battleship gray" with black lettering.
The receivers are excellent performers considering the state of technology in the late 30's to 40's. I use mine regularly on the 160/80/40 metres ham bands in CW service with various vintage transmitters.
My specimen had so far (I bought it from a used amateur equipment dealer in the UK , sight unseen...) one failed capacitor which I replaced, and it is in excellent, unmodified cosmetic and electrical condition.
I can mail digital pictures of it by request.

Amen. I nearly lost my mind before discovering that mine was bad. More
details in the SX-28 restoration case study at
http://www.antiqueradio.org/halli12.htm .

Be aware that the SX-28 has *two* AVC circuits rather than the usual one.
The military SX-28A manual has thorough discussions of every circuit in the
set and is very useful in understanding how this receiver works.

AVC and the S-meter are sensitive indicators of the receiver's general
health and state of tune, and hence, often among the last things to shape up
in the course of restoration. What you're looking for in an AVC circuit is a
varying negative voltage that goes from near-zero on no signal to as much
as -10 or -20 volts on the strongest signals. If you only get a couple of
volts change, then it's time to roll up your sleeves and start replacing all
the old paper capacitors. You should do that anyhow, but detecting weak AVC
will help motivate you even if the receiver seems to work "purty good" at
the moment.

Several of the bypass capacitors for the AVC circuitry are well buried in
the SX-28's RF box, as you can read about in the above article. Don't
rush -- it's a tedious job to replace them, but well worth it :-)

Hi, Joe, did you get any useful advice yet? Perhaps my web article (http://www.antiqueradio.org/halli12.htm) is one of those you mentioned as being not helpful for the SX-28A in particular.

I have not worked on a SX-28A myself, so I can't give any detailed advice, but I would certainly assume until further notice that the coils are fragile and should be treated with care.

When you say that one wire remained tied after unsoldering the easy ones for the first platter . . . is it possible that it was tied on the opposite (upper) side of the chassis? If you read the procedure in my article (thanks, A.B. Bonds!), you'll note that a few connections on the upside need to be unsoldered *before* turning the chassis on its back and proceeding with the underside work.

With or without platters, this is a very tedious set to work on. I was tempted at several points to simply give up on my SX-28. Fortified by lots of encouragement, I finally decided that anything I could unsolder and disassemble, I could probably reassemble and resolder, as long as I took notes and photos to guide me back to Kansas. So, I would urge you not to give up just because the job looks like a pain in the rear.

If you do discover any SX-28A-specific tips & tricks and would be interested in sharing them, I'd love to add your notes to my web article. There are a lot of these old beasts out there, and many people willing to invest the time and effort to restore them (yea!).

Regards,

Phil Nelson
philnelson@antiqueradio.org
Phil's Old Radios
http://antiqueradio.org/index.html

P.S. The SX-28 wasn't designed by Satan, just by ordinary Joes who never imagined that people would do goofy things like replace every capacitor fifty years in the future :-)

If this PTO has requires a tool that has a slot in it, vs. a screwdriver tip type of tool, I have one that I bought at the Collins surplus sale. It is a concentric tool, with the female slotted driver inside of the hollow nutdriver type of too. Let me know who needs it first, if it would help, and I will send it out. The only thing that I would want is that you would pass it on to the next fellow that would need it!

In regard to the 51J-4 PTO adjust tool, I made one by taking a screwdriver and cutting a slot in it with a Dremel tool equipped with a metal cutting disk. If you do this, be sure to wear eye protection.

481. Re: 51J-4 Endpoint Adjust - Finished!

Source record: 51374

As several of you stated, there is a little locknut on the end of the endpoint adjust that pretty much precludes this adjustment with the PTO in the radio. Unfortunately, I found out about the locknut the *hard* way - I busted off the end of the adjuster screw (thinking that it was just Glyptolized). Yeah, and I didn't have a manual (but I do now!)

So here's whatchya gotta do:

Remove the front panel - you don't even need to remove most of the knobs (the KC and MC adjust knobs, the antenna adjust knob, the filter selector, the BFO shaft, and the two crystal filter control knobs). Remove the two light sockets that illuminate the drum. Remove the three screws holding in the PTO. You have to set the KC adjust so that the hole in the gear lines up with the hole in the panel to get that last screw. Remove the fiduciary light and the KC readout.

Unlike the '390, the 51J PTO doesn't have any plugs so unless you wanna spend ANOTHER three hours unlacing cables and unsoldering wires, just do it in the radio, but you gotta lift up the PTO a little bit.

SO then you hafta remove the mechanical filters to make room for the PTO. Also there are some hex spacers attached to the PTO. Remove the BOTTOM one only (this gives clearance to pull the PTO up past the coupling). Lift up the PTO just enough so that the endpoint adjust appears thru the hole where the fiduciary light (the KC readout light). You can now adjust it without yoinking the whole mess from the radio. Yeah, and BE CAREFUL about that stupid locking collar!

I ended up pulling the PTO apart, removing the PTO adjuster coil, and attacking the locking collar with the coil out. But that's just due to my own stupidity.

Most likely, you'll have to screw the adjuster IN (as viewed from the front of the PTO, of course!). You now hafta keep installing the PTO, installing the KC readout, and checking to make sure you have EXACTLY 10 turns for 1000 KC (the only way you can really do this is by reading off the KC display - forget trying to estimate, you'll end up being at least 10 kc off). Make sure that the coupling disc is properly lined up or the thing will bind all to hell. Repeat until you're either satisfied with the results or you're so sick of it your're tempted to climb a bell tower with a rifle.

Ended up with +/- 1KC end-to-end. Oh, and I baked out the dessicant cannisters while I had the thing apart.

Thanks for all the responses. 73 John/W3JN

Source record: 51377

FOR SALE R1155 RECEIVER
Totally original condition,complete with DF section and in good working order.
R1155 receivers in all original condition are exceedingly hard to find.Most have long since been modified in various ways.Almost all sets encountered have had the Direction Finding components removed.Often the corresponding Direction Finding controls have also been removed from the front panel.The final indignity is then to "hack" the inside around in order to fit a power supply!For anyone wanting an authentic,unmodified,all original R1155,the task of locating one is very daunting.
The good news is that we have just taken just such a receiver into stock; an all original R1155 in exceptional condition.
All of the Direction Finding components are present, as are the numerous front panel knobs and switches.All of the individually screwed on name plates, for each of the controls are present and correct.The original Air Ministry plate is present.The frequency markings and coloured band marking on the tuning dial are crisp and clear.The tuning drive is the superior off-set type, with two speed course and fine tuning by concentric tuning knobs.The Magic Eye tuning indicator is present and functions correctly.Inside of the case,the original cork damping panels are all present and the original tube locator chart is fitted to the inner rear of the case.
The receiver has been thoroughly tested and is in full working order.
Included with the receiver is an in-line 8 pin Jones socket,used to feed in the antenna inputs and the the power supply and which also connects to the audio out signal.Even these Jones connectors are getting hard to find.Also included, is a copy of the Air Ministry manual for the R1155 and copies of various informative articles on the subject of the receiver.
The price for this exceptional receiver,which includes very thorough packing for safe transit and also includes Air Freight to the USA,is $595 US Dollars.
If you would like more information or wish to reserve this quite remarkable receiver,please contact,
Graham Leo info@radio-exports.com
Thank you for your interest.

Hi all,

I have some KT 66 for sale. They are labeled CV 1075 on one side and
KT 66 on the other. These are original GEC or Mullard valves. My guess
is that they are made by GEC for Mullard. Alle the valves are unused,
tested by me and they are in original grey gvt boxes.
You can look at them at my web site: www.demostenes.no
Just search for KT 66

Anyone have experience with those Chinese Taylor 572B tubes?
I wonder if they will put out using them in my SB200 amp? Dont know if
you can use them horizontally or not.....

In the "boatanchor game" originality is everything, so before ripping out the old capacitors willy-nilly, you might like to try the following: remove all the valves, and using jumper leads feed HT onto the HT rail through a high-value resistor (50 to 100k). Monitor the PD across the resistor. At first it will be close to the HT figure, but over a period of time (perhaps days) it should settle to a much lower value. You can calculate the leakage current, or measure it directly if you want. I've never tried measuring the PD on individual capacitors, but it might show which ones were duff, and which worth keeping.

I've used this technique on a number of radios, I've only lost one capacitor.

If you choose this route, you might have to accept that the radio won't perform as new, but the choice is between originality and performance.

HI,
I WOULD LIKE TO BUY A GE MASTER II UHF(HAM BANDS) REPEATER. I ALSO NEED A 100W
OR 75 W POWER AMP FOR A GE MASTER II UHF REPEATER

IF YOU HAVE ANYTIHNG FOR ME, PLEASE EMAIL WITH THE DETAILS

502. National NC46.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-18 22:59:48 UTC
From: Terry S <tsanford@nf.sympatico.ca>
Message-ID: <3B5614E4.A0363684@nf.sympatico.ca>
Source record: 51296

Have come across an NC46 which may be for sale shortly. The present owner 'did some work on it'; it was plugged in and was advised safe to switch on. Have no history yet
It's cosmetic condition appears to be about a 5 or 6 on a scale of ten. Metal cabinet with hinged top lid. Slight rust on a couple of worn corners, slight wear where two knob pointers have scraped the front panel, the paper? dial somewhat mottled but complete. etc. Was able to open top but not to move set and inspect back or bottom. Black metal and glass-tubes appear authentic but could not check for substitutions. Not sure if the knobs are original, suspect not.
It has a two gang tuning cap. suggesting that it does not have an RF stage? band spread cap sections on the side of main tuning cap. All working mechanically, pointers somewhat askew but move easily from end to end.
The coverage in four bands is from 500 kHz to around 28/29 mHz.
All controls seem to work; the set comes on has audio output but appears to lack sensitivity (no RF stage?)
The knob controls are; volume plus B+ on/off, main tuning, b.spread, band switch (4), 'sensitivity' (RF gain?) plus mains on/off. Switches are for, hi/lo tone, BFO (appears to be fixed/preadjusted with no front panel BFO freq. adj.) noise limiter,
Tube line-up as stamped into top of chassis adjacent to each tube appears to be; octals.
6K8 FC
6SG7 IF-1
6SG7 IF-2
6H6 Det/AVC?
6SF7 BFO?
6SJ7 Audio?
6SC7 Audio driver?
2 X 25L6 P-P Output
25Z5 Rect.
These tube designations are reminiscent, to me, of early W.W.II types?
The dial lamp had been replaced with a used Christmas tree bulb although the lamp holder appeared original!
Appears to have metal cased mains transformer and output transformer (or maybe it is a smoothing choke) with the O.P. transformer out of sight below?
It was hooked up to an external non-National speaker. Squinting; there seemed to be screw terminals at rear for the external speaker and three antenna terminals, presumably Open, and loop etc.
There is some white lettering which appears original, on the front panel between the tuning and band spread, "NC 46. National Radio Company etc.". Did not notice any 'model' numbers etc.

While it works and only had a few feet of wire attached it seemed to definitely lack sensitivity even on the broadcast band.
After all that description I guess my questions are;
1) Does this sound like a genuine NC46? I presume so. Am I correct in assuming no RF stage?
2) How desirable/rare is this model. Does it date from the 1940s? Or late 30s?
3) Any other information, model numbers or x.istics I should look for to help identify it.
4) Any other comments? Should I buy it?
Advice from more knowledgeable 'boat anchorers' would be appreciated.
TIA. Terry.
PS. Currently celebrating the 100th anniversary of Marconi receiving the first Transatlantic wireless telegraph signal on Signal Hill St.John's Newfoundland, in 1901; from Cornwall, England. A few miles from here.

John,
Thanks for the useful information.
I'm still months away from digging in to my 51j-4's end point problems so this might be a very stupid question...but, rather than installing and removing the PTO several times to tweak it in, is there no way to do this with a frequency counter monitoring the PTO and do the adjustment(s) ? I would think that measuring the required frequency swing prior to disassembly should tell one what to expect at the PTO output and how far off it is at various points....but maybe I'm not seeing the big picture yet...
Bob

From: SideValve <sabbatai_zvi@NOSPAMhotmail.com>
Message-ID: <r9dcltcjir3btu74am3btfndngdqntb6ci@4ax.com>
Source record: 51299
Cross-posted to: rec.ham-radio.swap,rec.radio.amateur.boatanchors

FOR SALE:
Lafayette HA-225 Receiver in very good condition.

Has general coverage and also bandspread for the amateur bands.
1966 era. Has Five (5) bands: 150-400kHz, 1.6-4.8MHz, 4.8-14.5MHz,
10.5-30Mhz, 48-54MHz

Additional bands for bandspread on the amateur radio bands.

14 tubes: 6AQ8 (6m rf), 6BL8 (6m mix/osc), 6BA6 (rf), 6BE6 (mix), 6AQ8
(Q-Mult/Calib), 2
6BA6 (if), 6AL5 (det, anl), 6BE6 (pro det.), 6AQ8 (af,bfo), 6AQ5 (af
out),
0A2 (reg),
6CA4 (rect)

Interesting design in that it covers all the way up through 6 meters,
and it has the output transformer mounted diagonally to minimize
hum from power transformer.

See: http://member.nifty.ne.jp/hanazawa/radio/lafayette/

Will sell for $95.00 plus shipping

Also have a Lafayette external speaker to go with it.
Model 99-2521 - matches their classic receivers. Excellent condition.

Will sell for $20.00 plus shipping

Pictures available

You really don't care about the absolute frequency as this can be adjusted
by the relative position of the KC display disc on its shaft. What you
REALLY are concerned about is that the PTO tunes EXACTLY 1 MHz in EXACTLY
10 turns. The only way to do this is to have a calibrated disk that will
attach to the end stub of the PTO and a pointer. A pointer is easy to JS
up, but the disk is another thing entirely since you can't just attach stuff
to the end of the PTO because of that big ol' shaft coupler. It sounds much
more dramatic than it really is... just a pain in the ass like with any
Collins rig.

I've calibrated a half dozen PTOs over the years. I find it easiest to remove the PTO, attach a good sized calibrated knob (with a make-shift indicator) and use a freq counter. In every case the PTO slug lost some of its permeability and the PTO tuned too slowly (i.e. it took more than 10 turns to cover 1.000 MHz.). I usually ended up taking one turn off the compensating coil to completely correct it. It's also possible to adjust the tracking cam so that it can be exact every 25KC but that's another story.

I used to have one of these units. It had a few crystal controlled transmit channels, with a tunable 23 channel receiver. It was a dual-conversion receive design, with I believe a 262KHz final I.F. It also had a crystal filter. Receive performance was similar to a Regency Imperial, Range Gain II, etc. A super good performer, even by today's standards. That would be a great rig to synthesize!
Oh, in reference to your remark, it was one of the best ever made!

Just a second to this approach. While it is possible to set the endpoint adjustment while the PTO is in the radio (if you have one of the unobtainium special tool sets), it is easy, quick, and painless to take the PTO out of the receiver and do the adjustment.

In many cases, because of normal aging of internal components, you will have to pull it anyway to take one (and only one) turn off the compensating coil. If you can't get the endpoints within a Kc or so following the procedure in the manual, then removing a turn from this coil will generally give you the adjustment range you need.

I've never found overall linearity to be a significant problem. My advice is to leave the linearity compensator alone. If you feel a compulsion to loosen the tension on the stack, get up and walk away, have a cold 807, run a marathon -- just do something else until the urge goes away :-)

Grant

From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tld8gctlg9f8bb@corp.supernews.co.uk>
Source record: 51308

FOR SALE Racal RA 218 Sideband Adapter & Fine Tuning Unit.
This Racal accessory was designed specifically for use with the Racal RA117 Receiver, for receiving SSB transmissions.
The unit takes its input from the 100kc's if output of the receiver and converts these signals into the audio components of the side bands.

Also contained in the unit is a Fine Tuner.
This is entirely independent of the sideband circuitry.
The Fine Tuner,which has an output of 1.7 to 1.701 Mc's is used as a fourth mixer local oscillator,when interconnected to the RA117 receiver.

Independent output levels are provided for both upper and lower sidebands.

The RA218 is a self contained rack mounting unit which matches the RA117 Receiver.
The unit uses a total of 12 tubes.
General condition is good,the front panel is undamaged,all control knobs are original.
The unit has been tested and is in good working order.

Sideband Adapters for Racal RA117 receivers rather scarce, which is a pity, as they are a very useful accessory.

Being a matching unit,and, like everything else built by Racal,of high build quality,the RA218 Sideband Adapter & Fine Tuner not only works well ,but looks good alongside the main receiver.

The price of this very useful Racal accessory,which includes the cost of packing and air freight from the UK to the USA, is just $395 US Dollars.
If you would like more information or wish to order,please contact Graham Leo
info@radio-exports.com

Thank you for your interest and time.

516. FS.Ships Lifeboat Radio

Source record: 51309

FOR SALE Ships Lifeboat Radio, Marinetta, Type TRP1

This unusual,high quality set,is a special purpose Marine Distress Transmitter/Receiver,made by Skanti in Denmark.

It is designed to operate on a choice of three International Distress Frequencies,namely,8364 kHz, 2182 kHz & 500kHz.

The equipment has an input for operation from a 24volts d.c. boat supply.

More significantly,the transmitter/receiver can be operated entirely independently of any ship's supplies, by a built in, hand cranked generator, (the single detachable hand crank is included),the built in generator being for use by misfortunate sailors when cast adrift in a lifeboat,following a disaster at sea.

Controls on the front panel include band switching,transmit/receive switch,transmitter tune,receiver tune and receiver volume.

The unit will send and receive both voice and cw.

The Lifeboat radio is fitted with a fully automatic morse alarm sender,and also has a morse key for sending messages by hand.
It comes complete with the correct original microphone and headphones.
Full instructions are fixed to the inside of the lid of the totally waterproof brightly coloured floatation case, in which the transmitter/receiver is housed
.
This is a nice piece of unusual maritime radio equipment ,from an age when things were built both to last and to be reliable.An important consideration, when you found yourself shipwrecked and your survival depended on the Lifeboat Radio working.

This scarce and very high quality Lifeboat Radio is in near new condition,making it a very attractive item indeed for the specialist collector of Marine Radios.

The very competitive price,which includes the cost of packing and also includes Air Freight to the USA, is only $295 US Dollars,

For more information or to order,please contact,
Graham Leo info@radio-exports.com
Thank you for your interest.

Proof enough... Free mag put out by GEEK!

It's no secret, any salesman would love to be
able to load up the ham bands with customers.
Since these people can't hold jobs anyway, they
are always looking for the quickest path of least
resistance to get what they can before it's time to
go. They don't care about anything that ham radio
stands for unless they can use it to stuff their
pockets.

But, if it were true that "ham radio is dead" as
easy as it is to get on the air these days, that
really reflects on 2-way industry as well. If
people don't need ham radio, why would
anyone want 2-way?

The reality, is that ham radio has all the technical
advantages of conventional 2-way operation, but
leaves the commercial aspect behind. People
who like to play with radios, like ham radio.
People who like to talk on the phone want to
take it with them, and don't want to be bothered
by too many gadgets.

One could also interpret the cover as a list of
frequency bands where the dying mobile radio
industry will hold out after wireless industries
have completely assimilated the rest of the market.
Currently, I have more Ham business than commercial,
and even taking on inside wire/PBX/LAN/CCTV
services, I don't have enough volume to give up
my day job.

Well, I don't know what might be special about a Johnson power divider but
hybrid combiners/splitters are not that difficult to construct. Is your
application narrowband or broadband? If narrowband, you could construct a
simple Wilkinson or Ratrace hybrid out of coaxial cable. These perform
quite well over a frequency range of about an octave (2:1). For broadband
applications, hybrids are constructed using transmission line transformers
wound on cores of appropriate ferrite material. Power splitters/combiners
in various frequency and power handling ranges can also be purchased
off-the-shelf from vendors such as Mini-Circuits. Sincerely,

As I recall, the Johnson "divider" is simply a 3dB (+/-) pad, used to attenuate the Ranger or Pacemaker (et al) when one drives the Thunderbolt using the tuned (vice swamped) input circuit.

I pulled this square peg (octal based, more accurately) out of a Hy Gain 644
"Footwarmer". It was marked "HyGain 760002". I was told that it's an 8908.
Both tubes have suffered a "smoke leak" (vacuum leak) and need replacing.
None of my manuals give the specs for this tube. I would like to find a
less expensive substitute.
Does anyone have it in any of their books?

W-e-l-l, it is neither quick, easy, nor painless to take the PTO out of the -J4 since you have to unsolder some wires and remove them from their laced bundles. You *could* do this with the PTO still tethered to its leads, but it is a 2 minute job to put the PTO back in the radio and mount the KC display disk. Another problem with this approach is that you gotta remove the coupling from the PTO to attach a knob to it - with the possibility of getting the coupler misaligned with the gear assembly in the radio.

I've read all about the horror stories on having to remove a turn from the compensator coil, but I've never run across one that needed it (the first 51J-4 I had was right on, and this one adjusted down just fine). And you can disassemble the PTO with it still tethered to the radio by its wires.

Here is the response I got directly from Bishop...

My response would simply be, "Oh, dry up."

I suggest you take a look at all the editorials we've published in defense
of amateur radio frequencies. As far as I know, ours is the only magazine
that covers commercial radio communications that has taken editorial
positions that defend frequency allocations for amateur radio. There's
nothing in the article to suggest our position has changed one little bit.

Thanks for the comments Bob. I have known a lot of guys that used these, but most were SWLs.

Having a way to listen to six meters seems like a big plus to me. When that band is open it will surprise you what you can hear sometimes!

All the best - SV

Fascinating. I would like to try some of that spray material for an
antenna on my roof!

I could see how such a three element fixed yagi on 40m would be
a great way to get directionality and gain for low cost!

Does anyone have any idea where to buy such a spray-paint?

Hi David - there are a number of repair places listed on the Open Directory which is used by a lot of different Search Engines.

I maintain the list as a service to my fellow hobbyists and am glad to add anyone else who gets recommended, but I cannot vouch for the ability or integrity of anyone on the list.

There are currently 26 listings.

See:

http://dmoz.org/Recreation/Amateur_Radio/Boatanchors/Repairs/

I hope that is helpful.

All the best - SV

Body handling: Binary attachment payload not displayed: RadioRanch.vcf

FS:..KWM2 Collector Station....FS
This one is Very, very,NICE and ....loaded!..KWM2
has noise blanker and is 9.5+, as is all of the
station...It includes 516F2 PS in like condition,
312B5 Console in like condition , A NEW DDS-2A
AOR digital VFO...and have a 30L1 that matches
if you want...without the 30L1, the station is just
$2450..plus shipping and handling (may have to
buy a few boxes on this one but wont jab you)
The 30L1 is $695 collector condition, or all for
$3100. Pay Pal OK~~ Trades considered for nicer late
HF rigs at wholesale, but only a portion...Need
money to give to the estate! Pictures available on my web
page <http://www.qth.com/k5mdm> ...73 Murray

[One or more binary attachments are retained only in the source text.]

Body handling: Binary attachment payload not displayed: RadioRanch.vcf

```
FS:..Collins KWM2/516F2..L@@K...FS
KWM2 is stock, no added filters or noise
blanker....the face is a 10, the case needs touch
up or repaint , call it 8.5...still not bad at all as you
can
see!...Face 10 on the PS, case again needs touch
up, but not badly. The whole thing looks pretty
darn good now.Especially for $995 plus shipping,
for one that will look like 1500 bux with a couple
of hours work. I do not care to trade for anything
other than late nice HF gear like I usually sell. Will

trade UP or sideways!....Pay Pal is good or USPS
money order! Both pieces work fine too!
Picture on my web page.. <http://www.qth.com/k5mdm>
Thanks, Murray

I got a couple of new 500 ohm 5 watt wirewound pots from Mouser today. Of course, being obsessive, I used the dremel tool to remove the brass bushing from the old pot housing so I could fit the new one in and, with the cover on, it looks just like original, and would you believe works as well! I have S-meter action - but my meter needs work, so it'll probably go off to Livermore.

<snip>
> Several of the bypass capacitors for the AVC circuitry are well buried in
> the SX-28's RF box, as you can read about in the above article. Don't
> rush -- it's a tedious job to replace them, but well worth it :-)
>

Phil's right on this one . . it's a tedious, frustrating job . . but you have to do it. Each section of the RF box can be successfully taken out, with patience and a careful reading of Phil's page. It's great when troubleshooting to know that the caps need not be worried about!

The radio's working pretty darn good, now time to grab a filament transformer and see to dropping the AC voltage just a bit!

Now THERE's a rig I haven't seen in awhile! Fond memories of testing 'em on the deck or inside enclosed lifeboats each 'n every Sunday heheh. I can still hear a buddy of mine on a close-by vessel doing a voice test on 2182khz while cranking.....(the effort was surprising once the transmitter was tuned!).....with the generator's cyclic whining in the background right in step with his panting and test call. Nice "portable" rig also....sort of like a 26" portable TV (ya know its portable because it has a handle on it).

Nice to see one didn't go to the boneyard though - and you're right on the super quality (typical Skanti anyway).

556. FS.R1224A Vintage Comm'n Rx.(RAF)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-20 10:38:37 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tlg2g4hqcmdeb7@corp.supernews.co.uk>
Source record: 51200

For Sale,Vintage British Royal Air Force, Communications
Receiver,TypeR1224A,
(dating from the early 1930's.)

radio-exports.com have for sale a particularly nice example of this hard
to find, vintage (tube) Communication Receiver.

These early HF Communication Receivers were used extensively by the British
Royal Air Force during the early 1930's.
They are particularly attractive, tube type receivers,having all the
charms a by-gone age.
For example,they were one of the very last RAF communication receivers to be
housed in a wooden cabinet.
Dominating the receiver front panel is a classic Muirhead dial drive.

The receiver employes a 5 tube circuit.It is designed for battery, or
battery eliminator operation and operates from 120 volts B+(HT),and 2 volts
for the heaters.The grid bias requirement is -3 volts,which can easily be
provided by two small 1.5 cells.

All original lettering remains on the front panel and the condition
throughout is very good.
There have been no modifications and all components are original.
The original calibration chart is still with the receiver,fixed, as it
should be,to the inside of the lift up lid.

Coverage is 4.3Mc's to 21Mc's in 3 switched ranges

This scarce and desirable collectors early communications receiver, is
in fine working order.
A schematic for the set is included.

The price,which includes the cost of packing and of air freight to the USA
is $395 US Dollars.

If you would like more information or wish to reserve this set,please
contact
Graham Leo info@radio-exports.com

Thank you for your interest.

>
>Great receiver.

Just to add to the discussion, mine cost $A200 about 2 years ago (=
approx$US105) but then there was no freight involved. I suppose
freight to the US only is included because collectors in no other
country would pay that sort of price!

For those interested in this set and its companion transmitter, the
T1154, a lot of technical detail and photos are available on the web
site that I have set up at

<http://www.zip.com.au/~sb/r1155/r1155.htm>

I've got a pristine SB101 transceiver, with SB-600 speaker, HP23A power supply, extra set of 6146B finals, swr meter, all cables and manual (original) . I built the radio myself, it has been in storage for 20+ years, and still works (last year I had it out and fired it up)... The ONLY thing I know wrong with it is a small (1/4") chip of paint off the edge of the right left cover of the cabinet . Other than that, it looks the same as it did the day it was built.

Asking $325 for the whole thing. Are you interested?

Must be the same firm as offering the R1155A?

I bought an RA117 (the US version of the RA17) in good condition and
working order recently for $A250 (=about $US130) at a public auction -
no doubt freight to the US from here (Sydney) would cost another $A250
but even then the total would be only around $US260! Maybe US prices
are higher than elsewhere!

Well, there really do seem to be some rip-off merchants around.

However the usual UK price for a good RA17 seems to be broadly 100 to 200 pounds. I paid 120 for mine in VG condition, no scratches etc.

Seriously though, there is one on Ebay right now for 150 pounds - do a search for hf receiver.

best regards to all

Source record: 51228

Hi folks. In my mad pursuit of military surplus test equipment I picked up another (!) TS352 multimeter with the MX815 multiplier. This is the one in the heavy aluminum case, bakelite panel, 1000 ohms/volt and 20,000 ohms/volt plus other features. The meter movement is sticking pretty badly and it looks like I need another. It's a Weston 972-2 meter movement, and I believe a Phaostron 40-013587 will substitute (that's on my other one). There may be others that will substitute, other contractors made this test kit. Do any of you fine folks have a spare that you're willing to part with?
By the way, the Rat Shack 270-409 battery holder makes a pretty good substitute for the 4.5 v military batteries this thing had.
Thanks
Robert

587. What Does the SWR Meter Do?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-21 15:48:52 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <9jc8b2$ft1$1@neptunium.btinternet.com>
Source record: 51231

WHAT THE HANDBOOKS DARE NOT PRINT

The SWR-meter is located in the transmission system immediately at the output of the transmitter. It is often housed in the transmitter case itself.

Immediately following the meter is a variable impedance transforming network, sometimes known as the tuner. The SWR meter can also be housed in the tuner case. But in any event the transmitter and tuner are electrically near to each other with the SWR meter in between.

A transmission line of coaxial or balanced-pair construction runs between the tuner output and the antenna feedpoint.

From one frequency band to another, from one end of a band to the other, the antenna input impedance changes greatly from one complex value to another. These swings in impedance vs frequency are reflected back to the transmitter end of the line unchanged in magnitude.

Transmitters are designed to work into a particular value of load resistance Ro. This is the resistive load into which the transmitter is capable of developing its maximum, undistorted peak output power without exceeding any internal voltage, current or dissipation ratings. It is highly desrable, therefore, for the load on the transmitter to be set to the design value at the start of a transmission and continuously monitored during normal operation.

The tuner's purpose is to transform the wide range of impedances vs frequency, seen looking into the transmission line, to the constant resistive value of Ro at the the tuner input. In modern equipment this operation may be performed automatically, the tuner coils and capacitors being switched by relays or driven by electric motors.

The SWR meter is essentially a 4-arm, RF resistance bridge. Three of the bridge arms are intgral to the meter and the 4th arm, the only variable arm, is the input impedance of the tuner. The circuit is arranged such that the transmitter is the signal source. The values of the bridge ratio arms are chosen such that the 4th arm, the input impedance of the tuner, is effectively the transmitter load.

Inside the meter the bridge RF unbalance voltage is rectified and displayed on a moving coil meter. When the input resistance of the tuner is equal to Ro the bridge is balanced, meter deflection is zero and the transmitter is operating with its design value of load

resistance. The purpose of the SWR meter, therefore, is to indicate that this important condition has been, or has not been realised.

It should be noted that when the bridge is not at balance the meter deflection gives very little information about what the actual load on the transmitter is. There is a very large number of combinations of resistance and reactance which will give a particular off-zero meter deflection and this is further confused by the uncertainty in transmitter RF output volts.

So the meter indicates only whether or not the transmitter load is Ro. But this is all that's required of it. Brightness of a pea lamp would provide the same information more economically if the meter movement and scales were not needed for other transmitter monitoring purposes.

It is now clear that an automatic tuner makes use of the magnitude and phase of the bridge unbalance voltage to maintain the bridge in a state of balance.

Also note, for the meter to indicate correctly, it must be designed around the same value of Ro as the transmitter it is used with. The standard adopted to allow meter interchngeability is Ro = 50 + j0 ohms. So meters generally differ from each other only by their through-power handling capability and operating frequency range. Internal circuitry and physical construction vary widely with frequency range but the basic mode of operation is always that of an RF resistance bridge. It doesn't actually measure anything.

Ron:

Last three HQ-180's on *that*auction place went for $356, $350, and 286.00
Others, with high reserve, have just not sold recently.

Ron Evans wrote:

For Sale or Trade:

Very Nice Loudenboomer Mark II Amplifier. Runs single 3-400 tube and has been well taken care of - non smoker.
The power supply has been converted to solid state. A TX-RX switch has been added to front of Amplifier... very well done.
Includes manual and documentation. Please make an offer - Pickup only, or deliver within 100 miles of SW Missouri. For a picture or more information contact me via Email or telephone call.

Thank you,

Kelly Ellison - WB0WQS

From: steve thomas <sthoma20lowspam@sympatico.ca>
Message-ID: <uHy67.1888$eY6.37914@news20.bellglobal.com>
Source record: 51240

Need manual, or copy there of, for Hallicrafters SX42 receiver.

Also, I had to replace several of the original mica capacitors.
They became resistors.
Anyone know what causes this?
One person told me that silver ions migrate through the mica under dc
bias.
Seems unlikely to me.
Was it poor bakelite used in the encapsulation?

I never had the T-100, however, an external relay always gets the job done. That way, you never connect much power or AC to the transceiver. You can power the relay with a wall wart. All the parts are available from RS. It's always worked for me.

Thanks,
I did, it is useful, and it is clear that people have gone to considerable length to make this resource available. Much appreciated. I would still like a better copy if someone has one. The component values in the schematic are only about half readable. None of my boat anchors came with manuals, but I have a collection of old books. If I can make a contribution to BAMA, I will.

Source record: 51257
Cross-posted to: rec.radio.amateur.homebrew,rec.audio.tubes,rec.radio.amateur.boatanchors

Hello,

I just found 3 pcs of the GEC valve TT22. This is a very close
equivalent to KT 88, but a special version with a top cap for the
anode. A max anodevoltage of 1250V and a dissipation of 45W (KT 88 is
42W). The heater is 12.6V 0.8A.
This is a rather scarce valve and usually very expensive. I want
$ 50.- each or best offer. E-mail me if interested.

Best regards,

Arnold Goks�yr

Can you tell me a little more about your Amp? Tuned input? HV, Fil on delay?
Looks like a very nice HB job.

From: Bill Russell <willy@global2000.net>
Message-ID: <malmltk9muujpa07gfhmqh7egvlastdle6@4ax.com>
Source record: 51268

Looking for a 75a4 receiver manual. Went to bama and they send u to
the Collins web site where all I can find is a full discription about
the radio but no service manual. I bet there is no web site to dl a
free manual such as bama.

From: TC Dufresne <tdufresne@neb.rr.com>
Message-ID: <XbJ67.32523$k33.2812471@typhoon.kc.rr.com>
Source record: 51272

OK you "twins" techs. Here is the problem. I have noticed, for the last few weeks , a "tone" in my headphones and speaker when I power up my T4X/R4A "twins". Its gradually getting worse. When I shut off the T4X, its gone! (of course I can't transmit-a bad thing) When the T4X is on, and I am on "x-cw" setting, wow! There it is. Turn to "ssb" or "x-am", its gone again! What is this? Its a constant tone, about 700hz, about the sound of a CW signal and very loud. Sometimes I can't even hear quiet calls.
Help please?

Thanks
TC

Source record: 51286

Drake T4XC (Ser.# 27,6XX), R-4C (Ser.# 26,3XX), MS-4 and AC-4.

The equipment is in good shape and loaded.

It has the stock 4-NB noise blanker, stock 250 and 500 hz. 2nd IF filters, as well as a 1.6 khz 16 pole Sherwood filter (as opposed to the stock 8 pole filter).

The receiver has the following Sherwood mods: 600 Hz. First IF filter, audio amp, power supply mods, product detector, of which were installed by Sartori Associates. There are other Sartori mods as well.

I have all the original paperwork for the mods.

Original manuals (not photo-copies) and connecting cables.

Tubes are about 1 year old, including Sylvania finals.

There are some minor scratches, but the equipment is clean and works very well.

All offers considered, including additional funds from my side to equal the value of the 1000D, but the only restriction is local only please (Los Angeles area). Tom W6EIJ Reply to tbeltran@earthlink.net

Sounds like something in the "spot" function. I know that when you use the R-4C with other Drake transmitters, you have to make some changes to either rig. You may want to post on the Drake list serv. You might assure that your receiver Function switch in "Ext. Mute"? Tom

BAfolks -

I'd like to find a manual (or at least schematics) for a Manson Labs synthesizer, military number O-1207. Rackmount, vintage 1960, covers 2-34 MCs, couple transistors & many peanut tubes.

Anyone ever heard of this thing? Apparently, similar units were used to drive/control R-390As in GRC-129 shelters.

For Sale - Drake C Line
Drake R-4C Ser #16,815
Many upgrades incl. Sherwood 600 hz CW filter and switch. No Drake filters/NB/acc. xtals. Front panel (4 posn. filter switch type)is perfect - replaced '98. AM position was converted to narrow SSB but needs the Drake 1.5 khz filter. Cabinet could use a re-paint. Non-original feet. Works very well - really nice audio! Asking $275 USD.

Drake T-4XC Ser #26,154
Clean chassis - bit of usual "spotting". Small 1/4" notch cut in rear panel above CW delay pot. Two 1/8" holes in side of upper cabinet near front. Cabinet could use a re-paint. Front panel shows a few scratches tight to right side from cabinet removal. Non-original feet. Works very well all bands. Asking $200 USD.

Shipping on each item will add about $25.
Sorry no MS-4/AC-4.

It's been quite a while since I've messed with those, but it sounds
like the sidetone is bleeding through on rcve. I assume this does not
key the rig. You might try changing the tube that is used for the
sidetone ocl and see if that helps. I've seen this happen before on
mine I think, and I think thats what cured it on mine if I remember
right. I still have my R4 and T4XB, but don't use them much any more.
I used to be up on those pretty well, but I forgot it all after the
years of non use. I fire them up about once a year to see which
electrolytic is gone next.. :(MK

I have a good 160-10 B&W PT-2500A amp for sale. It is not QSK
but can provide full output on CW, RTTY, SSB. Tubes are still
putting out 62% eff. It have a PI-L network in the plate tuning. Asking
$750 plus shipping. Would peter local or within 4 hours drive.

From: Martyn <martyna@bellsouth.net>
Message-ID: <qT777.5239$UB6.482304@e3500-atl1.usenetserver.com>
Source record: 51151
Cross-posted to: alt.ham-radio.hf,rec.ham-radio,rec.radio.amateur,rec.radio.amateur.boatanchors

Thank you for reading this posting, any help would be appreciated with the following problem that I have.Here is one to get your mind teased:::

Icom 756PRO or FT-1000MP or FT-101ZD as an input all give 100W
Feeding a Henry 2KL-4 Linear, running a pair of 3-500's
Upon initial key up in to a dummy load starts off 700W and drops to 200W in about 8 seconds.
Here's what I have tried
I have tried a total of 5 Transceivers
Tried a copal of dummy loads
Checked all of my leads
changed the tubes for Brand new ones
checked the reset button on the linear
I do notice when keying with 0W rf that the grid meter goes down to below the zero mark but I suspect that is just meter alignment and it only just goes down a slight amount.
you can see the meters creep down after about 8 seconds from 80 Grid 480 plate to 45 Grid and 380 plate
I have had the power company come out to check the voltage and current draw and everything there is 100%
Any ideas as this is blowing my mind
I appreciate any constructive input that any of you may have.
Thanks and Best 73's
Martyn

Martyn - If you have a forward/reflected power meter, insert it between your transceiver and the Henry amp. Note the forward and reflected power on initial keyup. Note the levels again after the problem occurs. Using the forward and reflected power, calculate the amp input vswr. If the vswr rises rapidly, I suspect something in the amp input circuit is failing during high power operation. Possibly the filament choke.

661. FS.C12 Transceiver Vintage Btitish Military

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-24 11:05:08 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tlqlhjioo2u205@corp.supernews.co.uk>
Source record: 51154

FOR SALE Vintage British Army Wireless Set C12 Transceiver.

The C12 Transceiver,otherwise known as Wireless.Set.C12, evolved as a replacement for the earlier "19 Set" transceiver.
Except for the fact that the C12 Transceiver is HF only (the "19 Set" also had VHF),it is basically similar to the W.S.19 and is interchangeable with it in most situations.
Overall,the C12 has a better performance than the old 19 Set.
The C12 consists of an AM and CW sender/receiver.The set, which is continuously tunable, may as an additional facility,be pre-tuned to any of two alternative frequencies and switched instaneously from one to the other,without re-tuning.To provide this facility,all tuning controls are duplicated,aerial tuning included and a single switch is used to transfer the tuning from one set of controls to the other.Sender and receiver are tuned automatically to the same frequency.
The overall frequency coverage is 1.6 -10.0 Mc's.
The transceiver which we have for sale is in all original condition
Included with the set,is the correct original power supply, designed to operate from 24volts dc (@ a max of 9amps, on voice-send),together with the original interconnecting cable from psu to transceiver.Also included, is the correct harness for the set,comprised of interconnecting cables,junction box,headphones and microphone.
This is a particularly good example of the C12 transceiver.It is in excellent condition externally and the inside is in mint condition.The harness,is as new.
The price for the transceiver,psu and accessories as indicated above,together with a copy of the user handbook,schematic diagram and including the cost of air freight to the USA, is $465 US Dollars.

There's some here, but plenty pricey!
http://forest.choiceoneonline.com/oceanstate/ose_p33.htm
Maybe a better source would be some old junker tube-type CB or marine
radio which would have several at a similar price!

WA4USO de K5DH:

Wanna keep it cheap and have that "olde-tyme homebrew" look? Use
OCTAL TUBE SOCKETS for your crystal sockets! FT-243's will plug
right in! Actual FT-243 sockets are getting scarce and spendy
these days. Someone else mentioned using sockets from old tube
CB and marine radios. Unfortunately, almost all of those radios
used HC-6/U crystals with the thin pins, rather than FT-243, so
they would be of no help in this instance.

Hello Martyn, I would check the entire bias circuit ..start with center tap of filament transformer and trace through the bias relay, resistor ,diode and finally through the grid meter circuit to chassis ground .. check all grid circuit components and wiring. problem could be other places but I would suspect a bias problem as # 1 suspect. good luck Harold W4PQW

Yes, it could indeed be a bias problem. Also check the socket of the tubes, and the tube pins themselves for bad solder connections and corrosion.

There was a bad run of 500z sometimes in the early 80s (??) and the solder would melt out of the filament pins.

Just a thought.

French au bas :

Hi, I'll explain you my problem. My city's police department crypts now her radio communications with a speech inverter system. For example, all sounds over than 1700Hz are reflexted under this sound frequency and opposite for the sounds under this frequency. I want make a little electronic system to decrypt this transmissions. It's for this reason that I need your help to know what kind of electronic piece I need... Thanks. If you may send me a plan or an exact procedure who to do it. Thanks!

M. Heppell

Please send me your answer to mheppell@sympatico.ca

Bonjour, je vous expose mon probl�me. La police de ma ville crypte maintenant ses communications radio avec un syst�me d'inversion de la voix. C'est � dire que, par exemple, tous les sons plus aigus que 1700Hz sont invers�s vers le dessous de cette fr�quence de son et le contraire pour les sons plus graves. �a donne un genre de charabia au lieu de la parole normale. Je veux d�crypter ou r�inverser pour pouvoir d�chiffrer ces transmissions. C'est l�gal au Canada seulement, il faut trouver comment les d�coder. C'est pourquoi je fais appel � vous pour trouver quel pi�ce �lectronique peut faire ce travail. Comme �a, je pourrais aller l'acheter et la brancher sur mon balayeur d'onde au lieu d'acheter au magasin un appareil qui fait ce travail et qui co�te plus de 150$ (750 francs). Merci d'avance!

M. Heppell

Svp envoyez-moi vos r�ponses au mheppell@sympatico.ca .

In addition to George's question, I would ask, does this happen the same way on all bands? If so, that probably eliminates leaky door-knob capacitors in the output stage, as well as problems with the input tuning stage. It might also eliminate parasitic oscillations.

Try checking the filament voltage for variation. Another thing to check is to see if the input SWR to the transceiver changes as the power drops.

Carefully check all the components on the Bias Board...at least look for discolored components or circuit traces.

I would be a bit suspicious that you only get 700 watts out of a pair of 3-500Z's with 100 watts drive. Should be more like 1200. Have you checked either set of finals in another amp to see how they perform? I have heard of people getting band new tubes that just don't work, or that were damaged in shipping.

Let us know what you discover!

73,
Ron

FA: Heathkit HA-14 "KW Compact" HF 1 KW PEP Linear Amplifier package,
with both of the separate Heath AC and 13.8V DC supplies and cables.
Covers the 80 through 10-Meter Ham Bands, uses a pair of 572B/T-160L
tubes.

687. FS: Johnson Viking Ranger & 275 Watt E F J Matchbox

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-25 03:05:43 UTC
From: mc@sover.net
Message-ID: <3b5e35bd.35957759@news.sover.net>
Source record: 51181

Hi Gang:

I'm listing these for an old-timer buddy of mine who doesn'r want to know about computers.....

The Ranger is in very nice condition cosmetically. There are a couple of small places on the front panel and cabinet where the paint was worn and needs to be touched up properly buit overall the paint is excellent. Touch up paint can be purchased that will match the color nicely and with a small amount of effort this radio can be made to look pretty much like new.

Electrically it appears to be unmodified. I am told that the screen resistor needs to be replaced.

The Matchbox is the 275 Watt version with the built-in SWR meter. This piece has been modified to offer an unbalanced RF output (coaxial cable) where the original Matchbox only tuned balanced line (open-wire line) and random-length wires. The meter on the front panel is not original; it is a Heathlit meter. The case appears to be in excellent condition.

Both pieces come with documentation - which are copies of the factory manuals and notes.

Asking price for both pieces is $350.00 plus packing and shipping costs. I would prefer local pickup in the Burlingto VT area but could discuss delivery within a reasonable radius of Burlington.

If interested please reply by e-mail. mc@sover.net

Cordially,

Michael Crestohl

688. FS: SB-104 owners-MFC6030A reg. chips

Thanks for ALL of your offers of assistance, Please note the following
At 700W the SWR was non existent, a perfect match then as the power
decreased the SWR went up to a total of 200W out = SWR of 2.9:1

The SWR between the Dummy load and Linear is fine, that does not change
HOWEVER the SWR between the RIG and the Linear goes up as described, The
High voltage is 3200V without load and drops to 3,000 under full load of
100W, does this help?

Best 73's

Source record: 51189
Cross-posted to: alt.ham-radio.hf,rec.ham-radio,rec.radio.amateur,rec.radio.amateur.boatanchors

OK...based on that, I would suspect everything in the input/filament circuit. If this happens only on one band, the input tuning is where I would look. If it happens equally on all bands, I would check the following:

1. The filament transformer
2. The filament chokes
3. Any loading or "swamping" resistors in parallel with the RF input
4. The zener diode that controls bias
5. The tube socket
6. The RF input switching relay.

Right now, I would be most suspicious of the filament transformer, since low voltage can severely limit the gain of the tubes, and you should be getting more out than 700 watts. The 3-500Z's need 5 VAC, and the experts say you need to measure "true RMS", and usually recommend an iron-vane volt meter for most accurate results. I think if there is a problem, you'll see it on any AC volt meter...probably a reading 4.5 volts or less. A shorted-out pair of bi-filiar or tri-filiar RF chokes that feed the voltage to the tube socket(s), a bad solder joint anywhere along the way, or a bad contact in the tube socket would give you the same result.

Another question...do the plates glow at all when you run up the power, and if so, do the two tubes glow equally bright?

696. FS.Classic BRT400/402 Comm,n Rx.British GEC.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-25 08:14:42 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tlsvtvpen9nv0a@corp.supernews.co.uk>
Source record: 51190

FOR SALE BRT 400/402 COMMUNICATIONS RECEIVER
A truly Classic British receiver,made by G.E.C.(General Electric Company).

Although these high quality receivers were made in the UK(where our company,radio-exports.com is based),we do not see them very often.
They were mainly produced in the late 1940's for government and commercial use.

The impressive SPECIFICATION,is as follows:-

The receiver is a superhet, which uses a total of 14 tubes.

The frequency range covered is 150-385 kcs and 0.51 to 30 Mc's.,in 6 bands.
The effective scale length 41.5 feet per band.(Scales are on edge lit perspex strips.)

Sensitivity <1 microvolt,for 1.5 watts out.

Image Attenuation >30dB at 30 Mc's.

Selectivity.
Telephony: 5.5,9.0,13kc's.
CW,Crystal Filter: 0.5,1.0,2.0kc's

AVC 3db change for 100 db change in input.

Outputs: 600 ohms 0.2 W,120 ohms 0.05 W,2.5 ohms 2.5 W,15 ohms 2.5 W.

If 455 kc's.

Fitted Signal Strength Meter

Switched Audio Outputs for Speech or Music.
BFO
Noise Limiter.

The inbuilt power supply uses tube smoothing ,to achieve very low hum levels. no No electrolytics used.
Operation is from 95-130 volts ac or 195-250 volts ac.

The condition of this impressive looking receiver,which is designed for standard 19" rack mounting,is extremely good.The front panel is in excellent condition and retains all of the original lettering,which is very clear and not worn.The front panel is not scratched or dented.
The components are original and the receiver has not been modified in any way.

The receiver which weighs 72 lbs,measures 10.5" high x 19" wide x 14.4" deep.

This receiver has been thoroughly tested and is in full working order.

The price,which includes packing for shipment,Air Freight to the USA,and a copy of the 93 page maker's handbook,is only $695 US Dollars.

For more information,or to reserve this particularly nice example of a very hard to find set,especially one in this condition,please contact

Graham Leo info@radio-exports.com

Thank you for your interest.

From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tltllt6fd25d55@corp.supernews.co.uk>
Source record: 51095

FOR SALE RACAL MA168 DUAL DIVERSITY SWITCHING UNIT.

The Racal MA168 Dual Diversity Switching unit is a transistorised equipment, designed for use with either RA17 series receivers or with RA117 receivers.However it can also be used with any other make of receiver,provided these have an IF output at 100kc's.
The purpose of the Adapter, is to reduce the effect of fading resulting from adverse propagational conditions.
The unit is essentially a high speed electronic switching device, which automatically selects the greater i.f.output of two receivers.
The unit has a built in stabilised power supply and will operate on voltages from 110 to 240.It will accept rt signals,ssb signals and telegraphic signals with speeds of up to 1000 bauds.
The i.f.input signals to each path are continuously monitored by two meters.
The Adapter,which is designed for standard 19" rack mounting,is a compact 2" high.

The unit is in very good, all original condition and is in full working order.
A copy of the manufacturers operating and maintenance manual is included.
The price for this useful Racal accessory,which includes the cost of packing and air freight to the USA,is $485 US Dollars.

If you would like more information or wish to reserve this unit,please contact:
Graham Leo info@radio-exports.com
Thank you for your interest

702. FS.C13 HF Station,Brit. Military Transceiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-25 14:33:45 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tltm4l60j5rd60@corp.supernews.co.uk>
Source record: 51096

FOR SALE Station Radio C13 (British Military HF Transmitter/Receiver).
This is a finely engineered,top quality, HF Transceiving Station,produced for the British Military,almost without regard for cost.
This installation, which is currently in stock at radio-exports.com,is the complete radio station outfit.

Frequency coverage is 1.5Mc's to 12Mc's on RT and CW.
Maximum Power Output 30 Watts.

The station is comprised of the following units:-
Transmitter/Receiver
24 volt dc input Power Supply,
ATU,
Antenna Base
Junction Box and Operators Control Box
Headset (headphones +mic.),and Morse Key
Full set of interconnecting Plugs and Cables,dc Input Cables and a remote Antenna Cable.
Two, correct, Steel Mounting Trays, onto which the various units can be secured,in order that the station can be moved as a single unit and also for mobile installation in a vehicle.
The original user handbook.

The condition of this equipment is excellent,in fact the best example we have seen.
It is in good working order.
If you are a serious collector of military sets and want only the best examples,then this particular C13 Transmitter/Receiver Station is most certainly the one for you.

This is ruggedly constructed equipment designed to withstand battlefield use,so it is rather heavy.Fortunately,we have access to very competative shipping,so you will be pleased to know that the price for the whole station,including packing and air freight to the USA,is only $895 US Dollars.

For more information or to order,please contact:
Graham Leo info@radio-exports.com

Thank you for your interest .

Greetings!

I am looking for some Drake stuff.......

....the 2C/2CQ(2CS)/2NT.....

or even a nice 2B/2BQ........

Will pay cash, or....I have some Elmac stuff I could trade.....

e-mail at dw73454@navix.net

Hi Steve,
BAMA is a terrific, free, service provided by Ken Grimm, with the gracious support of his employer's facilities. Scanned manuals in several formats are welcome, but I don't think Ken has the time or resources to accept hard copies that need to be scanned. Drop him a note via the website if you have any questions.
I've provided a lot of scanned manuals there, and encourage everyone to contribute.
All that said, I think I've got a very readable copy of the SX-42 manual, and would be glad to provide a copy at 10cts/pg + postage.
On the capacitor problem, I also have heard the mica/sliver whisker reasoning. It doesn't really matter what causes it, it does happen, not only in Halli stuff, Collins & others have the problem.
On SX-42's in general, they require a lotta work, but it sure is worth it. All the paper tubulars will need to be replaced, and check values of all resistors, many have drifted way off. I've done one, have another to be done. There are 1 or 2 great websites on them, I'd suggest taking a look if you haven't.
http://antiqueradio.org/halli07.htm is a good start, Phil Nelson's done a great job.
73,

From: richardkt@telocity.com
Message-ID: <9jnr0u$hbha$1@ID-57801.news.dfncis.de>
Source record: 51111

I recently acquired a military ME-26D/U VTVM. Works great but I'd like to calibrate. Can't seem to find a resource for a manual, either online or offline. Can someone point me in the right direction? I'm told it's the militarized version of one of the old HP 400-model VTVMs. Manufacturer of mine is Sentinel Corp. ANY help would be greatly appreciated.

Much obliged.

Rich Smardzewski

Source record: 51112

Would like to know how different the 75S series of Collins receivers are. Seems there is a five to one price ratio between the 75S on up through the 75S3C. Seems most of the differences are number of filters and number of crystals. Other than the nostalgia, is there much technical difference among them?

Thanks and 73s,

Evan

Source record: 51114

Hi,

Try:

http://www.logsa.army.mil/etms/find_etm.cfm

and do a search in the titles box for ME-26

It should come back with three manuals, all free for the download.

The unit is a repackaged HP-410A. The manual even shows the ME-26A/U
as an HP-410 rather than the military package.

Calibration is pretty simple if you have the gear to do it. The main
problem with them is the tube in the RF probe burning out. A new tube
will cost about twice the price of a used voltmeter.

Hope this helps

This is a follow up to my recent posting requesting for help with my linear, Henry 2KL-4, I would first like to thank all of the kind people who have thrown suggestions at me, I have followed most of them through.
Well here are my findings as of tonight (Tuesday)
I located a dry joint and re-soldered it now I get the following

80Mtrs 400W 50grid .380 Plate Stable
40Mtrs 800W 160 Grid .560 Plate Stable
20Mtrs 400W and drops to 150W UNSTABLE
15Mtrs 600W 110 Grid .520 Plate Stable
10Mtrs 600W 170 Grid .66 Plate Stable

Now these are the results, the High voltage remains constant. All above tests in to a Bird Dummy load and power read a Bird wattmeter. The SWR between the TX and the Linear increases on 20Mtrs as the power drops. The exciter output is 100W constant key down.

So Low output and unstable on 20Mtrs Any thoughts???
I do notice the right hand tube glowing a slightly brighter orange than the left one.

I have schematics should anyone need them, I have them zipped

I thank you very much for your constructive suggestions

>You also seem to have audio through the Balanced Modulator, as the Drake
>only ran one sideband on AM, as I recall. And just unbalanced the Balanced
>Modulator to generate low level AM.

No. Drake used a modulator tube for screen modulation. The circuit
is nearly identical to the DX-60 !!
At least this is true of the TR4, I am not 100% sure about the TR3.
But on receive the SSB filters were used so it is too sharp for good
AM.

Good work Martyn. Although the power seems a bit low, but then I don't know if its tuned up all the way or if the drive is enough. Thats another subject.

As for 20meters. You have something wrong in the 20 meter input circuit. Check for cold solder connection. Burnt coil and/or capacitor (mica's). Perhaps a bad cap that is burnt inside. Replace them all just out of General Principle. RF Parts in California is a good source.

You wrote:
>many members are in need of FT-243 xtal sockets.

Use octal tube sockets. An FT-243 xtal will fit exactly in every other hole of an octal socket. With just one octal socket and a switch, you can have a switchable two-frequency transmitter!

Best resource will be amateur radio magazines, especially QST, from '49.
Another source would be from the advertising in the back of the 1949 ARRL
Handbook.

742. What's this SX-28 "Improve Reception" thingy?

Item # 1257957052 on eBay now, the description says it's a "New and Unused 3-tube upgrade kit with instructions" and I've never heard of this, not even from the Dachis book. Evidently the kit contains three tubes that replace the 6SK7 and 6AB7. I note that in the accompanying picture one can't quite make out the numbers of these mysterious tubes.

Anyone out there heard of this and/or know what those tubes might be?

Joe W9TXU

743. FS: JOHNSON VIKING II & 122 VFO

Rosin (or resin-I always forget) can be had at a music store and
dissolved in denatured alcohol.
One fella (dialcover@webtv.net) sells it pre-made in a little dropper
bottle for something like $5 postpaid. One bottle should last a while!

Many years ago I tried to improve my SX28 by changing the RF valves. I
think I used a 6AC7 but the noise was terrible.

Hi All,

I have two tube type VHF FM Base station radios by GE. They worked once upon a time when removed from service.

I have two tube type VHF FM Mobile radios by GE. They worked once upon a time when removed from service. They can be put on the two-meter ham band.

They are too heavy to ship. Pick up in central Michigan (between Flint and Lansing). These are probably worth about $9000.00 each on ebay, but if you bring me a subway Tuna sandwich with everything for each radio you can have them all. Bring the sandwiches... leave with the radios.

Hi Rich,

Not a problem. The main question about the site is how they came up with what is downloadable and what is still restricted. There's some truly old (like WWII) stuff that you can't get and some very new stuff that's there for everybody to grab.

Weird!

For you guys wondering about this radio....it is great (I have one).
Also the price of $695 including shipping, is a great deal, as it's $1145 on their website.
The radio is very reminiscent in feel and performance to the RCA AR-88, but prettier.

British General Electric was not tied to GE here. It was closer to Western Electric in its product line.

The manuals that you can't get to are in the 'Sensitive but Unclassified' (SBU) and 'For Official Use Only' (FOUO) groups. These manuals have restricted distribution for a variety of reasons.

Probably the biggest group are those manuals that were provided by the manufacturer as proprietary and/or copyrighted information. The government has a 'restricted license' to the manuals which does not allow them to make the materiel public.

There are other reasons for restricted distribution, of course . . .

Go the the arrl site, http://www.arrl.org and order the CD that has all QST magazines from 1940 through 1949. It's item #6648. There's also a CD for the Fifties, #6435.

Each CD is 39.95

They have 'em for every decade, going back to 1915.

(I assume you have a PC you can view the CD on.)

You can also check on Ebay. Quite a few people sell old QST magazines, and you might locate one from 1949.

Another idea: If you're in a big city, call the main branch of your local public library. I used to peruse QST magazines at the downtown branch of the Dallas Public Library. They had 'em, going way back, and it cost no money go in and browse.

Don,

I would research a 1949 ARRL handbook and the 1949 QST's. That would give you a pretty complete survey. Although , not all manufacturers advertised in both QST and CQ magazines, so you may wnat to search out some 1949 CQ magazines as well.

Source record: 51064

It has been a while since I did one of these, but when I did mine, I opened the PTO and removed a turn while it was still wired up in the radio. I then adjusted the PTO and reinstalled it.

What is disappointing in the 51J is that the darn PTO endpoint moves a lot faster than in the 390A for instance. I've done dozens of 390A's and they hold for years. The 51J moves fast, so I give it an extra KC or so knowing that it will move into place in a year or so and then be on the money!

As others have suggested, QST, the Handbook and other ham mags of 1949
are the best source. Catalogs are also a good reference, if you can
find them.

I pulled my 1949 QSTs off the shelf and compiled a list. Prices are
rounded off to the nearest dollar or so. Where two prices are shown,
they represent the advertised extremes.

It's interesting to note that "slightly higher west of the Rockies"
was in many ads, and that some prices did not include tubes.

Collins:

75A-1 $375
51J-1 $875
310B-1 $190
310B-3 $215
310C-1 $85
310C-2 $110
32V-1 $475
32V-2 $575
30K-1 $1450

Hallicrafters:

S-38 $50
S-40A $80-100
S-52 $80-100
S-53 $70-90
S-72 $80
SX-43 $160-190
SX-71 $180
SX-42 $275
HT-17 $39 (all coils) $29 (40 meter coils only)
HT-18 $110
HT-19 $360

National:

NC-33 $58
NC-57 $90
NC-173 $190

NC-240D $236
NC-183 $268
HRO-7 $313
HRO-50 $350
HFS $142

Hammarlund:

HQ-129X $178

RME:

RME-84 $99
RME-45 $198
RME2-11 $146
HF10-20 $77
VHF-152A $87

Harvey-Wells:

TBS-50 $100
TBS-50A $122

Meissner:

Signal Shifter $50 kit, $100 wired

Stancor:

ST-203A $45 kit, $59 wired
ST-202A $93 kit

WRL

Globe Trotter $69 kit, $79 wired, $17 set of tubes, meter and coils
Globe Champion $279 kit, $299 wired, "NFM model" $199 kit
Globe King $379 kit, $399 wired

Micamold

XTR-1 $20 kit (less tubes)

EF Johnson

Viking 1 $210 kit

Subraco

MT-15X $79 (less tubes), $87 (with tubes)

Military surplus

BC-221 $100
BC-348 $120
BC-453 $16
BC-454 $6-8

BC-455 $8
BC-456 $3-4
BC-457 $5-8
BC-458 $8
BC-645 $10
SCR-522 $34

--

The average income of 1949 must be kept in mind when looking at these prices. In those days, $5,000/year before taxes was very good wages. $10,000/year was easy street.

Looking for Raytheon, Apelco, and Webster CB equipment,
literature, manuals, brochures, parts, crystals, mics,
and so forth, for my Museum collection. Specifically
looking for the following models:

Raytheon:
Tube-type: Raycom, Raycom II
Solid-state: Raycom III, Raycom IV, TWR-9, TWR-11
Hand-held: MW-2, Ray-ette

Apelco:
Tube-type: AR-9, AR-10

Webster:
Tube-type: Bandspanner Four-Eleven
Solid-state: Bandspanner 550
Hand-held: WT-2

Please drop by my on-line Raytheon CB museum:

http://www.qsl.net/k5dh/raytheon.html

Nice info Jim. I'm sure that many NG readers will appreciate your post, as well as the original poster.
I suppose that a quick ballbark comparison with today's prices would be to simply multiply the prices by 10, which may be on the modest side.
In any event, those rigs were expensive! About $10,000 for the Collins 51J in today's dollars.

The exact factor is 7.48 (http://stats.bls.gov/cpihome.htm). So, that
1949 model 51J-1 cost the equivalent of $6,545 today.

It's hard to make a comparison because things have changed so much. Inflation is not a "level" thing. I think that one of the biggest changes has been that necessities have gotten more expensive (and more numerous!) but luxuries have gotten cheaper.

Not many 1949 hams could afford a 75A-1/32V-1 setup, but almost anyone could afford a BC-454/BC457 rig. What's the 2001 equivalent of military surplus?

My personal favorite in the cost/benefit category is the BC-453/xtal converter setup for 80 and 40 meters.

Some points about the equipment list:

- Almost no VHF/UHF equipment
- Prices vary over a very wide range
- Some manufacturers made a whole line, others only a few items
- The number of choices in a given price range was very limited
- Receivers outnumbered transmitters by a wide margin, and there were no transceivers at all
- Many popular BA manufacturers (Heath, Drake, CE) had not entered the amateur market at all in 1949. Others (Johnson, B&W) were just getting started.
- There were probably more models and manufacturers than the list shows. Hammarlund made more than one receiver at that time, but they

didn't advertise much in QST. The availability and price of surplus depended on where you lived - old timers here in Philly tell me you could get all sorts of great surplus on Arch Street for pennies-per-pound.
- The Novice and Technician licenses did not exist in 1949, so there was no equipment targeted to them.

One question remains: Why 1949?

For the sake of discussion, even though the original question was
regarding equipment being sold in 1949, we'd be remiss in not noting
that a very large percentage of ham stations were homebrew in that era.
The equivalent cost of factory-made equipment pretty well indicates that
only a few could go out a buy the 'latest' model.
My Elmer, W4OSJ, still used a homebrew 100-watter on 40 AM with an old
cathedral set for keeping skeds with his buddies well into the 60s!. (He
only used his SX-42 for special occasions, I suppose)

Subj: Radio Microphones for Harmonica, 7-27-2001

I'm a blues harmonica player interested in some of the old mics you radio and ham guys might have laying around the shops or in boneyard collections, working or nonworking. Especially the Astatic JP-30, 31 (Classic Retro Bullet "Spokesman"), Astatic D-104, Astatic 30, (biscuits), Astatic DN 50, Astatic 600 (too cool!), Turner 22X, 22D (Buck Rogers), Shure 520 (Green Bullet), Shure 7A, American (Saltshakers), Webster-Chicago (Wire recorder mics), etc.
The base would not be used so the head is the important part, the more retro the better. The 1 piece with stand models and "CB" styles are not desireable for harp mics. Please have a look around and let me know what you find.

Mr Mojo

July 21, 2001

I am pleased to enclose for your kind attention the “Announcement and Call for Papers” for Symposium on Maritime Disaster Management. The Symposium is being organized by the Frontier Guard General Directorate, Ministry of Interior, Saudi Arabia in collaboration with Saudi Aramco and King Fahd University of Petroleum and Minerals. It will be held at KFUPM in Dhahran, Saudi Arabia from 19-23 January 2002.

The Symposium provides a forum for dissemination and exchange of information encompassing a broad spectrum of topics related to management of maritime disaster. Special technical session, workshops, exercises and exhibitions and are being planned. It will encourage and facilitate the interdisciplinary communication amongst experts, researchers, scientist, government and academia, local, regional, and international agencies and industry.

Abstract are invited on the topics outlined in the enclosed brochure, and others which fall within the scope of the symposium .to register your interest as a participant or to submit an abstract for consideration, please complete the relevant forms(s) and return your submission without delay .we strongly encourage abstract submission without delay .we strongly encourage abstract submission by E-mail (please see the symposium broacher for further details).

Looking forward to hearing form you soon.

With best regards.

Dr.Abdulaziz M.Al-Suwailem

790. What is this?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-28 10:27:01 UTC
From: Ed Price <edlprice@home.com>
Message-ID: <Vrw87.19198$MC1.5457307@news1.elcjn1.sdca.home.com>

I just acquired a few very used microwave coax items. Here's one I
can't identify. Does anyone have any ideas about this gadget?

Some info:
It's made by HP, but no part number, just serial number 1859.
It has two N female connectors, and a row of adjustable
set-screws.

OK, it's sounding like a band-pass or band-reject filter, and from the
size, maybe up in the 10 GHz region. But then what is that big
flat-head screw on the side, and what is that strange, one-pin
electrical connector next to it?

Maybe this is a filter, with a detector built-in? Or maybe a
directional coupler, with a DC output?

If that pin is an input, then we're really in strange territory.

TIA,
Ed

Does anyone have specs on a UTC "Special Series" model S-17 output transformer, or know where I could obtain them? It's a single-ended audio output transformer. The secondary is pretty well marked, but the primary is tapped, and the taps are just marked with arbitrary numbers (1-7)

Thanks!

Mike

Source record: 50945

I have a HyGain 10/15/20m 5 element beam and Mosley 40m 2 element
beam that I would like to trade for manpower. Here's my situation.
This system is still up at my old QTH. I need to get it down, as we have

moved to a new QTH. The system is located in Orlando, Fl. I want
to install the tower at my new QTH for 160m vertical use. But I'm not
interested in the beams or rotator system to go with them. I'm willing
to
give the beam's and rotator system to anyone who has the equipment
and time to take the tower down. It's 85ft of Rohn 25g tower.

Anyone in the area that's interested can contact me at:
gwt@mpinet.net

Hello,
I bought this unit in good shape with no manual.
I am useing the Variac and isolation transformer.
Can you tell me what the AC leakage probe is for ?
How is it connected to a circuit ?
Thx.
Also just bought an Antwater Kent 55C. with no cabinet.
Is it common to display this type of radio with no cabinet ?
Is there a common way to display ?
This is the first radio of this type I have ever owned.
Thx. Glenn parker

Hi,

I have found a few nice Telefunken valves:

1 pcs ECC 81 NOS, original box <> $ 35.-
1 pcs ECC 82 NOS, original box $ 30.-
1 pcs ECC 82 NOS, white box <> $ 35.-
1 pcs ECC 83 NOS, original box $ 30.-
3 pcs E88CC used, tested 'as new' white box <> $ 25.- each
1 pcs E88CC used, tested 'very good' white box <> $ 20.-
1 pcs EL 84 NOS, original box $ 30.-
3 pcs EF 86 NOS, original box <> $ 35.- each
1 pcs EF 86 NOS, white box <> $ 30.-
1 pcs EF806S (low noice) NOS, original box <> $ 40.-

E-mail me if you are interested.

Best regards,

Arnold Goks yr

827. Re: BK Precision 1655 AC Power supp;y

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-29 15:41:23 UTC
From: Wayne Hertel <whertel@onemain.com>
Message-ID: <3B642EA3.1C65EFF3@onemain.com>
Source record: 50971

Glenn,
I bought my photocopy of the manual for the 1655 from
www.douttelectronics.com for about $15.00 if I remember right.
The leakage probe is used to measure leakage current from metal parts of the item under test, chassis normally, to either the hot side or the neutral side of the AC line. To obtain an accurate reading, set the output of the 1655 to 120 VAC, touch the tip of the leakage probe to the chassis of the item under test, press either the COM or HOT pushbutton on the 1655, and push the PUSH TO TEST slide switch on the probe forward, assuming the probe has this switch. This assumes the 1655 is properly adjusted for operation. Any more questions, let me know. Can't help with the radio.

Good luck,

Wayne Hertel
whertel@onemain.com

Here is an excellent BC-375E with 9 plug in
tuning units. All the tuning units are in
excellent condition and half of them have
never been used. Included are:

TU-5-B (three)
TU-6-B
TU-7-B
TU-8-B (two)
TU-10-B
TU-26-B

Also included is the antenna tuner, the
BC-306A, also excellent. All tubes are
included and are good. Four spare
VT-4C's (211's) are available to the
buyer for an additional $100. I have
the original instruction book for operation
and maintenance as well (excellent).

The rig, tuner, and all tuning units are
unmodified. All these are in exceptional !!
cosmetic condition, except one of the
TU-5-'s which is fair.

Due to the amount of "stuff", this is pick
up only or I may meet you up to 100 miles
from Bolton, MA. Total price for all
not including the spare tubes is $695.

>> Our local pawn shops sees a lot of these... they come after the local power
>> and phone companies replace the ones used by their linemen.. I pick up two
>> for $6.00 each at the local pawn shop..

Just a note of safety here guys. There are a few reasons the local phone company and power company gets rid of the safety belts and lanyard. One they do not comply with the new OSHA regulations dictating the use of full body harness. Two every so often they are replaced because of age, dry rot etc. Many are not taken proper care as the manufacturer states. If they are taken care of properly they will last a long time. But I can tell you from experience most guys don't take care of them.
NEVER EVER USE A LANYARD THAT SHOWS A RED STRIPE SHOWING. This should be thrown away, the red thread is the wear mark which means the lanyard is beyond mechanical limits.

Hey I like a good deal but ask yourself how much your life is worth? Is your life worth $1.00 or $6.00? A brand new lanyard and safety belt really doesn't cost that much. How much does a casket cost? Can you get those at the pawn shop? Pay a little now or a lot later.

This is not meant to break anybodys chops. Just a friendly warning. A line belt saved my life twice so you don't want to mess around with some old junk.

838. FS: Johnson Thunderbolt + Junker + Finals

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-29 19:02:30 UTC
From: "Joe Giacobello, K2XX" <k2xx@swva.net>
Message-ID: <3B645DC6.B2CCF117@swva.net>
Source record: 50982

The working Thunderbolt is working perfectly. It was on the air about three months ago for about three months, and it was putting out 800-900 watts in Class C. It has been modified for solid state LV and HV rectifiers. One of the LV's is plug in, while the others are wired in beneath the chassis. (I wired across the original sockets, so they haven't been removed.)
I had to replace the circular four pin bias jack on the rear apron with a square one. I believe those are the only mods, but I may have forgotten one or two others since I haven't had it opened up in more than five years or so. The front panel is in good condition with a few scratches. The cabinet is in fair condition with many scratches but no dents, although there is a very slight indentation under one threaded rod nut at the rear. All the knobs, etc. are intact.

The junker has all the transformers except the plate. The rotary inductor is missing, but I have another one around that needs cleaning up, etc. The meters are both there, but the glass on the plate meter is cracked. The plate tuning knob for the rotary inductor is badly chipped on one side. The grid tuning knob is missing. There's some stuff missing from the final tank, but the neutralization capacitor is there. The ceramic coupler on the coupling shaft is broken. The case and panel are scratched, but otherwise in good condition with no dents. There is a good bias jack that could be used in the working unit, if desired.

The package includes the world's largest collection of replacement fans for cooling the 4-400s.

In addition to the two good 4-400A's in the working rig, I have one that is claimed to be good and a pair Eimac 175A's, which I presume are good. I also have three 4-400A's which I have tested as weak, but which can be used to make neat lamps.

I have 3-4 3B28's and 2-3 complete sets of voltage regulators. I also have a small box of miscellaneous parts and tubes for the Thunderbolt.

The package also includes a home-brew antenna changeover relay unit that allows relatively easy switching to and from barefoot when using a transceiver as a driver.

I also have somewhat tattered original manual.

The price for the complete package is $600 with pickup at my QTH in SW (Floyd) Virginia. (There might be a possibility of meeting the buyer at some reasonable distance from my QTH.) Since I haven't tested the three presumed good final tubes, I will refund to the buyer $25 for each of the three tubes that he determines to be NG.

Contact me via e-mail or at 540-745-6825.

Tnx es 73 de Joe

Hello,
Thank you very much.
That saves me the price of a manual.
Which is a few dollars here in Canada.
I could not figure it out, but after you explanation I
checked and the Com and Hot buttons are there.
It now makes perfect sense. Thanks again.
New at this and some simple things mess me up.
I got the unit for $60.00 US funds.
Good price even with out the manual.
Got it on ebay but it has a tag and it came from a hospital.

You know why they replace them? I can think of several reasons. The biggest is that the manufacturer along with MSHA require the harness to be replaced after ANY fall. Thanks, but I'll trust my life to only a NEW harness. You don't know what a used one has been through.

Anyone for Russian Roulette?

Nah, they replace them on a timetable. I think that even a cursory
inspection will show worn or broken stitching or worn straps. Use
common sense. Besides, where is your "last chance" belay?

Russ

If I am not mistaken, this receiver was made for the millitary. I was an equivalent model to the SP600. Not a bad receiver.

Hello
I have a Zenith Trans-Oceanic Model Y600 SW receiver for sale. It is the type that has the "Wave Magnet" antenna on top. The radio is in good condition with some scuffs on the unit and some missing white paint on the antenna. It works well but needs some tuner-cleaner sprayed into the band selector buttons. Asking $200 shipped anywhere in the US.

I have several older Radio Handbooks, the ones by "Editors and
Engineers". They are complete and in good condition. The following
versions are available for $15 each (or all four for $50) plus postage:

Fifteenth Edition (c. 1959)
Eighth Edition (c. 1941)
Twelfth Edition (c. 1949)
Sixteenth Edition (c.1962)

ALso, one ARRL Handbook, 1968. Scuffed cover with a few tears on the
cover/spline area, but the book itself and all contents are in good
condition. $5 plus postage.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1260100090

Own one of the more unique pieces of Radio History! The Moscow Muffler
by AEA was designed to combat the over-the-horizon radar by the Soviets,
that obliterated parts of the ham bands in the late 1970's. I was a novice
ham back then, and remember being in a DX QSOs on 40 CW when the
damn Woodpecker would start up and wipe out my contacts! High energy
pulses with regular timing, it was very broad-banded and wiped out most
of the lower HF bands for many minutes at a shot.

Very good shape unit. Can also be used as a noise blanker with good results
on interference with regular pulse rates where you can hear the pulses.

Great radio nostalgia item!

Thanks for the look.

If the "first sign of trouble" is an accident, then someone has not been
looking for trouble like they should; i.e. inspecting the safety belt
and lanyard before each use. This kind of equipment is designed so that
defects are readily apparent, but you do have to take a moment and look
for them.

I have a mint condition BC221 freq meter for sale. A Bendix model, I believe it's an "M" model...I'll take a bettter look tonight.

Anyhow it's in beautiful shape. Spare tubes, too. No batteries, I'm happy to say, as they'd probably be ugly by now. Case is perfect except for a few minor scrapes on the bottom, and the unit itself is very nice.

Offers please. Buyer pays actual shipping charges only. I usually use UPS "foam-in-place" for secure transit.

Please reply directly: n0xb@arrl.net or retire@rconnect.com

875. FS: COLLINS KWM2- pick up near Philly, PA

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-07-30 19:48:19 UTC
From: jimmoci@aol.com
Message-ID: <20010730154819.26728.00001827@ng-fj1.aol.com>
Source record: 51018

FS: Collins KWM2 with waters rejection unit. Very clean radio. Cabinet repainted- very good job. Front panel looks great. The only real flaw on the rig is the S-meter. Meter face has some paint imperfections but I have a newer Collins meter from Surplus Sales to replace it with. Just never got around to it. I want to sell this locally so you can see it's condition and see it work. $875 PICK UP ONLY near Phila. PA. Please dont email me about shipping it. If it does not sell I will relist it and ship the unit.
Thanks!

876. Testing a 205-D on a TV-7D/U tester

Hello,

I am looking for information on how to test a
Western Electric 205-D in a TV-7D/U tube tester.

I have data for how to test a 205-F tube but don't
know the differences, if any, between to two tubes.

Any help is greatly appreciated.

Thanks.

Joel

Source record: 51020

I think the govt factor previously cited of 7 times or so price inflation since then is too low. a friend of mine and i (both in our early 50's) concluded that we think things today cost at least 8 times what they cost in the late sixties (obviously electronic equipment like tvs computers and yes ham equipment is the exception) but to get a feeling for what equivalent part of a budget went to ham radio, I'll bet the cost comparision should be at least 10 to 1.

878. WTB Old IC for Heath SB-303

Newsgroup: rec.radio.amateur.boatanchors

Do you have an SX-73 or a R-274/FRR (SX-73) ? The SX-73 is the "civilian" version while the R-274/FRR is the military unit. Either way, you have a very rare and desirable receiver. Regarding the R-274/FRR (SX-73), I've hear that approx 1000 of these receivers were made. The Hallicrafters military version of the SX-73 was built to the same specifications as the SP-600. Nothing beats that flywheel and smooth tuning of the Hallicrafters. If the receiver is nicely aligned and tubes in good condition, it gives great performance, even on the top band. I have two of these receivers and one SP-600

Source record: 51027

For Sale.R107 British (WWII) Vintage Communications Receiver (tube)

Here at radio-exports.com,based in the UK,we have a really nice example of one of the all time classic boatanchors,the British Army Receiver Type R107, dating from the Second World War era.

These receivers are very well built.The set uses 9 tubes and the frequency coverage is from 1.2Mc's to 17.5Mc's.They will operate on both American and European mains supplies and from 12 volts dc.
This particular R107 is in extremely good, original condition,with original finish and lettering on the front panel. All knobs and switches are present and correct.

Better still,this R107 still has the detachable protective case front ,and,even more unusually,it still has the large scale receiver schematic,correctly fixed inside the lid.

The R107 receiver is impressive, for a number of good reasons.
Firstly, the "flight deck" array of front panel controls -no less than 14,plus the various sockets for antenna,headphones, etc.
Secondly,it is impressive just by virtue of it's size and weight;
24" x 13" x 17.5" and almost 100lbs on the scales.Even by boatanchor standards,this is a big impressive receiver!

The one which we have for sale is in full working order.

A copy of the large and very comprehensive operating and technical manual for the set is included.

This is a classic boatanchor, if ever there was one!

The price for this most impressive WWII R107 receiver,which even includes the cost of packing and air freight to the USA,is $540 US Dollars.

If you require any additional information, or simply want to order,please contact Graham Leo info@radio-exports.com

Thank you for your interest and attention.

885. FS.R109 Vintage Comm'n Rx. Brit WWII

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <tmcu4vqj240166@corp.supernews.co.uk>
Source record: 51028

FOR SALE Vintage R109 British Communications Receiver

The R109 Communications receiver,dating from the 1950's,is a well designed,compact equipment,made in relatively small numbers for use by the British Army.R109's are quite scarce and are a communications receiver which we at radio-exports.com ,in the UK,we do not see very often.
Frequency coverage of the receiver is 2Mc's to 12Mc's. The receiver uses 8 tubes.This one is a particularly nice example. It still has the internal pull out spares tray,(which is usually missing),containing the original set of spare valves and a spare vibrator).Externally,the receiver is in good condition and internally it is in near mint condition.
The receiver is in good working order.A nice receiver for the collector of vintage military sets.
The price,which includes the cost of packing and of Air Freight to the USA, is a very modest $328 US Dollars,which makes this scarce set particularly good value for money.
If you would like more information or wish to reserve this receiver,please contact Graham Leo info@radio-exports.com

Thank you for your interest.

To all,

Rig Builders GE Ham News (1-48) is now on K4XL's
-=Boat Anchor Manual Archive=- (BAMA).

http://bama.sbc.edu/

This 1948 issue of GE Ham News has great charts for comparing various
tubes
and circuits for Drivers, RF Amps and Modulators. This is needed if you
are considering building a new-old rig, or working on an old homebrew.
I
found it in an old estate and thought the information was needed. I
scanned it at 300 dpi for good resolution in printing. It's 565kb, for
all
8 pages. It prints and looks good at 8-1/2 x 11".

(Note the directory at BAMA might change. ???? Right now it's on:

ftp://bama.sbc.edu/downloads/ge/hamnews/ Click on 1-48.pdf

exact link is ftp://bama.sbc.edu/downloads/ge/hamnews/1-48.pdf

Message-ID: <3b66d181.2190287@news2.sover.net>
Source record: 51034

Hi Gang:

I'm listing these for an old-timer buddy of mine who doesn't want to know about computers.....He originally asked me to offer it as a pair with a Johnson Ranger but we decided to break it up and sell separately.

The Matchbox is the 275 Watt version with the built-in SWR meter. This piece has been modified to offer an unbalanced RF output (coaxial cable) where the original Matchbox only tuned balanced line (open-wire line) and random-length wires. The meter on the front panel is not original; it is a Heathkit meter. The case appears to be in excellent condition. It come with full documentation - which are copies of the factory manuals and notes.

Asking price is $100.00 or best offer plus packing and shipping costs.

If interested please reply by e-mail. mc@sover.net

Source record: 51036
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

This is another project that I'll probably never get to......

This radio is quite clean and will probably take little effort to bring back into useful service. Cosmetically it is very good but the hinged cover needs a bit of TLC. Electrically it is unknown as I do not have the facilities to test it. For an external 12VDC power supply to be usable it requires a 3/16" tip telephone plug which I don't have so I cannot power it up. I don't know much about this radio and so I feel it would be better off in the hands of someone who does.

I would like to get $100.00 plus shipping for it. I have seen other examples sell for $200 and up on ePay and other auction sites. If interested please reply by e-mail.

Are modulation transformers designed to be fed from an external 4/8/16 ohm audio amplifier rather than directly from tube plates? Big audio power amps were expensive then but no longer.

>power amps were expensive then but no longer.

No, most were designed to operate driven by class B amplifier stages. Some were designed to be driven by single-ended class A amplifiers. One of my stations in the late 50's used a Heathkit audio amplifier for a modulator. The original output transformer was removed and a suitable modulation transformer was installed. I also converted the output tubes from 6L6's to 807's. I had very good audio. I could send ya a scan of a faded B&W picture if you like. It's worth it for the wallpaper. :-)

You can use an audio amp to drive an output transformer in reverse transforming the low impedance output up to the suitable impedance for the modulated stage. The transformer must be able of handling the audio power and the dc current. I have done this successfully in the past. You can use half of the output transformer's primary (now a secondary) at 1/4 of the p-to-p impedance. Also remember in a modulation transformer, the key item is impedance ratio, not absolute impedance AS LONG AS THE PLATE CURRENT CAN BE HANDLED. I have used "reverse connected" output transformers to modulate 6146s directly or to drive the grids of a Class B modulator....works like a charm.

Help needed please.

Looking for a 5 pin connector to feed external power into a US Navy TS-323/UR frequency meter made by the Daven Co Livingston NJ.

Need the cable mounting female receptacle version of the connector.

The chassis mounting jack on the TS-323 unit is a 1 inch diameter fitment with a screw thread fixing and five equally spaced pins, may be similar to the LM series???

As I am in the UK, any help from over in the USA would be appreciated.

Thanks

Himself

Hi Phil,

You could do a pretty good eBay description generator if you just took
your phrases and arranged them in random order. I really believe
that's what a lot of people do.

I have the R-274/FRR version and I agree that it is an excellent receiver. However the top band uses the second harmonic of the LO for mixing and contributes to the lack of sensitivity on that band. The TM that I have, somewhere, is written very carefully and reading between the lines I feel that it never was very good on that band. I've aligned my receiver in accordance with the TM and it meets all the TM specs on all bands, including the meager specs for the top band.

Alan,

According to my reference library of old Allied catalogs the KN400 was a 40 watt early solid state stereo amplifier. It was not a kit product. I have a KN310MC receiver that is the comination of the KN400 amplifier and a KN260MC tuner. I purchased that on e-bay for $25.00. The amp is interesting but not very good. Information from the 1962 catalog.

Regards,

Bill Cohn

I want to thank all those that responded to all my questions.Either by the newsgroup or e-mails.It is a civilian model SX73.I cleaned her up and is really in beautiful condition.I cleaned all the turret contacts and she plays great!Even the frequency dial is on the money.Not bad for $100 bucks! Just one thing left to fix is the meter.It doesn't work right...no signal reading and when I switch to AGC it pins to the left of meter.Again any help on this would help.Thanks alot to all 73,John

916. Need Hammarlund SP600 BFO Switch

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-08-01 03:29:14 UTC
From: knudsenmj@aol.comOscar
Message-ID: <20010731232914.20772.00001970@nso-bh.aol.com>
Source record: 50859

The handle and "ball" broke off on my SP-600's BFO ("Mod/CW") switch. I know some SP600s have been parted out lately and wonder if someone would sell me a replacement. It's just a DPST toggle switch, but I'd like an exact (visual) replacement. Doesn't have to be from a dead SP600 as long as it looks right and fits OK.

This is such a rugged receiver -- imagine my surprise when the switch came apart in my hand one night!

Now, if I could get a 3PST version in case I add a prodcut detector someday -- Mike K. AA1UK

Life is a game. Play to enjoy!

antonelron@hotmail.com (Anton Elron) writes:

>Are modulation transformers designed to be fed from an external 4/8/16
>ohm audio amplifier rather than directly from tube plates?

No.

Modulation transformers (hereafter referred to as "mod iron") are designed to match an audio amplifier to the modulated stage. In most designs, this means push-pull plates to a Class C plate-modulated stage. Important considerations are the audio power capability, impedance/turns ratios, insulation rating, DC current rating, and frequency response.

In the '60s, there were designs for mobile AM rigs published where filament transformers were used to match transistor audio stages to a modulated tube final. Some folks have also successfully used power transformers as mod iron.

921. FS.R1155 Rx & DF Meter Vintage Brit Near Mint

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-08-01 11:09:17 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tmfoovjfq43f3@corp.supernews.co.uk>
Source record: 50864

FOR SALE R1155 RECEIVER AND DIRECTION FINDING METER
This receiver is almost as good as the mint one which we sold recently and it has the added bonus that it comes with that, "oh so hard to find" accessory,the TWIN NEEDLE D.F.Meter, as used in the Lancaster Bomber set-up,in World War II.Apart from a very professional refinishing of the cabinet at some time in it's history,this R1155 is in totally original condition,complete with all of the DF section components.The Twin Needle D.F.Meter is totally original and is in very good condition.

R1155 receivers in all original condition are exceedingly hard to find.Most have long since been modified in various ways.Almost all sets encountered have had the Direction Finding components removed.Often the corresponding Direction Finding controls have also been removed from the front panel.The final indignity is then to "hack" the inside around in order to fit a power supply!For anyone wanting an authentic,unmodified,all original R1155,the task of locating one is very daunting.
The good news is your search is over.This exceptionally fine R1155 and it's accociated D.F.Meter are the real business.

All of the Direction Finding components are present, as are the numerous front panel knobs and switches.All of the individually screwed-on name plates, for each of the controls, are present and correct.The original Air Ministry plate is present.The frequency markings and coloured band marking on the tuning dial are crisp and clear.The tuning drive is the superior, off-set type, with two speed, course and fine tuning, by concentric tuning knobs.The Magic Eye tuning indicator is present and functions correctly with plenty of luminosity.Inside of the case,the original cork damping panels are all present and the original tube locator chart is fitted to the inner rear of the case.
The Receiver and the Twin Needle D.F.Meter have been thoroughly tested and are in full working order.
Included with the receiver and the meter is an in-line, 8 pin Jones socket,used to feed in the antenna inputs and the the power supplies,and which also provides the connection to the audio out signal.(Even these Jones connectors are getting hard to find).Also included, is a copy of the Air Ministry manual for the R1155,full details of the Twin Needle D.F.Meter,inter-connection details for both units and copies of various informative articles on the subject of the receiver and its direction finding role.
The price for this exceptionally fine receiver,together with the rare Twin Needle D.F.Meter,including very thorough packing for safe transit and also including Air Freight to the USA,is $695 US Dollars.
If you would like more information or wish to reserve this remarkable R1155 Receiver and its associated Twin Needle D.F.Meter,please contact,
Graham Leo info@radio-exports.com

Thank you for your interest.

I no longer have my old Allied and Walter Ashe catalogs, so can't look
it up for you, however, I believe that the Amphenol 80-MC2M is the
correct plug. Many Rangers did not have PTT installed. This was a
"field" modification. You would need to see if there has been a relay
added. The PTT circuitry is connected to pin 2 on the mike connector.

>2. Would I be committing BA rape if I replaced it with something more
>conventional, like a stereo phone jack?

Yes. 8*)

>3. OK, who's got a male connector for this that I can put on a mic or use to
>make an in-line adapter cable? Tnx es 73, Mike K. AA1UK

Unfortunately, Amphenol doesn't make this one anymore. At least the
search engine on the Amphenol web site couldn't find it the last time
I looked. I'm afraid that his is the kind of thing you find in those
boxes under the tables at hamfests. You may be lucky and have one
offered to you as a result of your usenet posting.

>PS: The rig seems to tune up fine; I just haven't been able to test the
>modulation, beyond touching the audio contact with a screwdriver and getting a
>buzz out of the modulation xformer. With a mic hookup, I could put this on the
>air.

I think you have it figured out. If you get a buzz by touching one of
the wires going to the socket, check to see if it is pin 1 on the
socket. You may need a magnifying glass and a bright light to see the
numbers on the socket, but I believe that they are there. If audio is
on pin 1, your PTT line is keyed by shorting pin 2 to the shell or
ground.

>Life is a game. Play to enjoy!

Ken K4XL - Replace "invalid" with "net" to reply.

The funniest part about that one is that a SB-301 is only a receiver,
not
a transceiver. No wonder he couldn't find the Mic.

I am parting with my TS-511S station. Consist of the TS-511S transceiver, Matching SP-511S Power Supply/Speaker, and matching Remote VFO-5S. This is an all tube transceiver made around 1970, similar in technology to the Drakes. Overall condition is good and is fully functional. I use this unit regularly. Has all good tubes and a fresh alignment. $295 + shipping and packing. This unit is HEAVY so shipping may run a few bucks. Or, if your in the Houston area I will drive up to 100 miles to deliver. Email me for pictures.

This xcvr needs a 40 meter xtal and probably an alignment. I picked it up at Dayton because the front panel, dial, meter, etc. were perfect, the case, though not perfect, was nicer than my last two FPM300's and the insides were not butchered. Now that I'm home, I realize I don't need another project. Comes with an AC power cord that is functional, though the plug is not correct and a partial copy of a manual. Looking for someone to give me the $150 I have in this rig and I'll split the shipping costs in Conus.

I donï¿½t seem to have a service manual for anything that has a pin modulator in it. Like the hp8699. I believe they all work with a negative bias, like you would get from the hp211. If someone out there has used the hp873x modulators, they will know.

Best, Dan.

Doug,

Long time since I've seen you post anything. If you don't get a taker,
I'll pay $100.00 shipped to Indianapolis, as its untested, etc. for the
T4XB. Figure worth that for parts I may need someday.

Thanks & Bests,

Patrick

Cubic (Swan) ST-3C tunes random wire, balanced line (300 ohm),
or 2 coaxial lines. Handles all standard transceiver output levels
or QRP. Excellent condition. Works perfectly. Isn't limited in band
coverage like some tuners - covers ALL HF ranges and bands.

Only $13 at present with no reserve.

Thanks for the look.

You may be correct. I saw the same thing in the movie and it confused
me.
On the long shots it was definitly a transceiver (SB-102,103??) but when
they zoomed in enough for me to see a number, I saw SB-301 on the
name plate. They must have had more than one unit around and didn't
notice the difference since they weren't really transmitting. After
all, most of the SB series stuff does look a lot alike.

Source record: 50874

My 2020 has a small flutter / warble, noticeable when receiving cw, and I suspect on transmit as well. I think I've tracked the problem down to the vfo, which exhibits small shifts in frequency as you listen to it (at 9.125 mhz on a separate radio, for example).

It does this even with the PLL disconnected, and providing power from a well regulated external supply doesn't help.

I tried cleaning the variable capacitor, but no differece.

Bad transistor? Out of tolerance resistor?

Message-ID: <20010801152718.23866.00001979@ng-mp1.aol.com>
Source record: 50875

Hi Guys;
I am selling off many of my Older BoatAnchors. I cannot keep up with them all and I don't have the time or knowledge to restore them the way I would like. I had a few Elmers who were going to help but they've become Silent Keys this year.
ALL THESE RADIOS ARE PICK-UP ONLY in the Long Island, NY area. I could get more if I ship them out but dont have the patience for that "Check is in the Mail" balony :-)
Here are a few items:
1- Central Electronics 600L amplifier, untested, FP is Excellent, cab is good , needs the feet, copy of schematics only. Price is $300.
2- Hallicrafters SX-101 with 160 meter band, have two, both have chipped main knob, both play, one needs align, etc. the other is much better, Very Good+, easy, price is $150 & $200, no papers.
3- National NC-300, plays nice, all complete, excellent, needs knobs cleaned & polished, cab. is nice $300.
4- Same as above, not as nice, plays $150.
5- National NC-303, non original cabinet but a real nice one, plays, $300.
6- Hallicrafters SX-101, later version without 160 but has scales for 6 & 2 meters, Plays, needs Alignment, tubes etc. Very Nice $175.
7- HALLICRAFTERS SX-28, nice. plays, $400.
8- Johnson Viking II, factory wired, all original, working, FP is Excellent, has some paint chips around the FP on the top edge, $300. Not many originals around, needs a few tubes, gets 75 watts out, Audio ok.
Please do not e-mail for info if you are not even thinking of picking any of them up locally. I guess they could be shipped but the Shipping cost would be very expensive and I really don't want to get invloved at this time.

Change the VFO 4 pin FET, its the same kind that always goes bad in the
front end of them things.
Its been 16 years
Make sure the VFO tuning cap bearings are not gummed up (bad path to GND)
first.
That old grease dries up and gets real nasty

935. F.S. Drake T-4XB Transmitter $150.00

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-08-01 20:02:24 UTC
From: Douglas Snowden <snowden@peoplepc.com>
Message-ID: <tmgd8a9u9sqed7@corp.supernews.com>
Source record: 50870
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I bought this Drake T-4XB transmitter last weekend at a hamfest and
have changed my mind about keeping it. I don't have a power supply
(AC3 or AC4) to go with it, so it is not tested. The guy I bought it
from said it was in good shape. He said he had cleaned the switch
contacts on it, but it looks to me like it could use more cleaning - maybe
not.
I pulled the tubes and tested them and they all test good. The chassis has
the usual splotches here and there, but not bad. The front panel is in nice
shape. I cannot tell if the cabinet has been repainted or not, since it has
been
a long time since I have seen an original Drake 4 line. I have plenty of
packing
material so it will be packed well. Shipping will be calculated via UPS to
your zip code. I plan on putting all of the tubes in a separate box within
the
same box. There is no manual with it, but they are available here and
there -
I think you can download a copy off of the "bama" ftp site. This is
probably a
decent price, since I see one on ebay now that is missing a knob and has
some
sort of homemade cabinet for over $100.00.

I have an excellent condition cabinet Hallicrafters SX-28 for sale. Radio plays very well, sounds great, and operates well on all bands. I don't know if it's been 're-conditioned' or not, I haven't taken it apart to look - if it works don't fix it... I bought the radio as a gift for my father but he no longer has a use for it.

Would prefer pick up in the St. Louis area, or will meet within reasonable distance - say 100 miles... No shipping, it's too heavy.

Looking for $340.

Thanks,

John

Any good reason why not? If you already have a powerful audio
amplifier, you don't necessarily want to tear it apart: also most of
the better tube designs had specialized output transformers. (See
McIntosh, Quad, Bereskin, et al)

Is there some reason this would be a bad thing?

> Is there some reason this would be a bad thing?

A HI Fi amplifier can make an excellent modulator. They have very low distortion and usually
lots of feedback which further helps to lower distortion and make the frequency response flat.
A tube amp or a transistor amp can be used. The problem is finding a suitable transformer to
match the RF amplifier. There are some transistor modulation transformers around if you can
find one. They had a low impedance primary that can be connected directly to the output of a
transistor amp. The secondary then feeds the plate circuit of the RF amp. The trick is to find
one with the proper impedance ratio to match the transistor amp to the RF stage impedance.

If you can not find a transistor modulation transformer you can use a tube type high power
audio transformer in reverse and put a large choke in the RF plate circuit DC line and couple
the audio transformer with a capacitor. This keeps the DC off the audio transformer and keeps
the core from saturating from the DC current. If the core does not have a gap in it (as most
audio transformers do not) you do not want DC in the windings. It will work With the DC in the
windings but it will greatly limit the frequency response. All modulation transformers have a
gap in the core to reduce saturation when DC is on the windings.

Hello. Thanks for reading this. I just purchased an old General Radio capacitance bridge. The front panel is really rough. If I were to repaint this, how would I deal with the markings? They are engraved into the panel and filled with white paint. It seems like if I stripped it and repainted it, the engravings would be filled with paint of the wrong color. Any suggestion would be appreciated.
thanks,
John kc4zxx

John , sometimes I paint the whole thing, then when the paint is totally dry ,take a pointed instrument ,like a large needle,or ice pick and trace the lettering to remove the new paint..then you can use a white paint stick (Antique radio supply) WWW.tubesandmore.com) or you can open a can of white latex paint and get some thick paint from the lid and wipe it over the lettering until the groove fills, then wipe panel clean with wet cloth (water) . if you are careful and lucky you will be happy with the results. good luck Harold W4PQW

There isn't anything wrong with any of this guy's ads, typical of
many/most EBAY's and it appears the guy made every attempt to be
honest an open about his sales....certainly not selling empty boxes.

Maybe you're the bloody idiot, and perhaps the gene pool would be
better without you, Curmudgeon.

I thought in the movie it transmitted "real LONG away." DX-wise, the signal didn't go one lousy inch! :-)

BTW, I thought the tubes in the movie lit up awful fast and awful bright. That's what "Hollytricity" will do to filaments. Very dramatic, though. 73, Mike K. AA1UK

FW from rec.antiques.radio

Happy People,

One of the "Radio" departments at work (I think, the group that provides air to ground on company frequencies.) was hauling big box of stuff to the dumpster. I intercepted it, took it home and picked out what I could recognize.

There were a few things in the box that I have no use for, but may be useful to someone. Packaged in sealed cans with older octal socket.
- Motorola Relay 280k1003 24 VDC
- I Think a Low Pass Filter Type 5709-27HPx Made by Price Electric Corp
- Stancor Output Transformer A-8101 Line to Voice Coil

I also got these big heavy, rack mounted Collins radios and something the shop foreman called an "exciter." The exciter is Collins RF Unit 242F-501. It is obviously missing tubes. It does have this kind of interesting 20" long brass box with a slider that's marked in a way that suggests it's used to adjust frequency.

There are also two radios, one obviously incomplete, one with no noticeable missing parts.
The Collins data plate on one says 129.55, the other is blank. The radios each have some small tubes and two big tubes RCA 75-43, 3B28 D with X-ray warnings on the bases.

I'm not interested in messing with this gear. I grabbed the boxes to have a lifetime supply of small piece parts in my hobby shop.

I doubt this is the secret lost Marconi treasure. I am happy to forward some of this stuff to an interested party as long as it doesn't wind up costing me anything.

Email me if you are interested.

Regards
Bruce

> > >ohm audio amplifier rather than directly from tube plates?
> >
> > No.
>
> Any good reason why not?

Yes. Almost all mod iron is designed to match Class A, AB or B tube
plates to a Class C modulated stage load, AND to carry the modulated
stage plate current without saturating. Both windings are high
impedance.
>
> If you already have a powerful audio
> amplifier, you don't necessarily want to tear it apart:

Agreed. But most audio amps are meant to drive speaker loads, which
are low impedance. Class C modulated tube stages present loads on the
order of several thousand ohms.

> also most of
> the better tube designs had specialized output transformers. (See
> McIntosh, Quad, Bereskin, et al)
>
Dynaco, Marantz, Harmon-Kardon, etc. All variations on the basic
Williamson concept (BIG iron and feedback around the entire amplifier)
and usually the Ultra-Linear circuit. All meant for high quality audio
reproduction.

> Is there some reason this would be a bad thing?

It's inefficient, expensive and heavy. You'd need a special
transformer to match the low output impedance of the audio amp (say, a
nice Dynaco Mark 3) to the load of the modulated stage (say, a pair of
807s). Two heavy, expensive transformers where one would do. And you'd
lose a certain percentage of your audio watts in the process, because
the transformers aren;t 100% efficient. That's why the transformer
makers designed mod iron the way they did.

Mod iron is one reason SSB got so popular.

This is a great site! So far I've only found one communications receiver, but virtually every home radio had SW on it, so it qualifies, right? (Russia is too big to serve on the AM and FM bands, so HF was/is widely used for domestic broadcasting).

There are some stunning art-deco home radios pictured, as well as Russia's first transistor radio (like our Regency), and a history of the radio business there. Even early components are shown: capacitors, resistors, diodes, etc.

An entetaining look, indeed.

Some of those Cold-War era multiband receivers were used as 'headend'
receivers (a la cable) to receive the broadcasts and redistribute them
via cable in remote areas. In the 60's, USSR used satellite relays
downlinking on SW like the old OSCARs to reach these areas.
The other intriguing aspect of what is seen on this website is the
amazing similarity, right down to the bezel, of some of the old 30s
radios to popular American counterparts.

>But wasn't that the model used in the movie "Frequency?"
Yes it was !
That and a SB-300 (the one that was dropped in the movie)
Actually I own one of the props (the 301) from the Astoria Filmworks prop department in Long Island City
used in the movie.
The extra PC board's were a IF strip's from old TV sets.
The radios was run a 24 volt supply to light the tubes bright for filming
The original case has to be repainted
The radio was saved from the set trash bins restored and re Xtal for SW bands and is my favorite SWL receiver.
I even built a clone wide AM xtal filter for it ...its sweet.
I will never part with it, amazingly the set has Zero drift 9 (from a COLD start) .
The LMO is marked TRW and not Heathkit
To bad after all this work there is nothing to listen to on SW besides RN and VOA
The BBC dropped broadcasts to the US and the rest is bible packers.

Does it use tubular paper capacitors molded in black Bakelite
cases? With color-code stripes? If so, they will be leaky by now;
don't even bother to test them. New mylars will probably cure your
problem.

I thought that was the case. Good effect for the average moviegoer who probably doesn't even remember vacuum tubes.

Some movie traditions live on, even though everyone knows better. Consider the computers, they all buzz, beep and scroll characters across the screen as though they were a glass teletype. Since so many people own computers now and know they don't make those sounds, why do the movies still insist on it?

Cubic (by Swan) VERY versatile tuner. Doesn't have fixed bands, but rather has totally flexible L and C adjustments with logging scales so that you can tune almost ANY band into almost ANY type of antenna: 2 coax inputs, 2 posts for ladder line, and 1 post for a random wire.

The INSIDE is absolutely MINT. Not a mark, not a burn, the contacts are perfect and the chassis is totally shiny. This tuner is like NEW inside.

I've had it for over 20 years, but it's been in storage most of the time. I used it camping with an Atlas-210 a couple of summers.

You won't find a nicer more versatile tuner!

Hi,

The LMO's in both my 301 and 401 came from the factory marked TRW. As far as I know most if not all of the Heath LMO's came from TRW for the 301 and 401.

Think you right Bob with exception of the SB-102 and early SB300 and 400's.
The SB-102's solid state VFO was a unstable thin wobbly aluminum mess
I believe for the SB-101, 301 and 401's Heath hired TRW assemble and add
temperature compensation
I have seen many SB-102 LMO's ....real lemons

I am offering this classic beauty from WRL...The V-10 VFO..
The V-10 consists basically of a seven band, electrically, mechanically
and thermally stable variable freq. oscillator to be used in conjunction
with CW, AM, or SSB transmiters. It provides a stable output for 160,
80, 40, 20, 15, 10, and 6 mtrs, covering all portions of each band...
This VFO is in like new condx...comes with copy manual....
So quite playing around with xtal's and get youself a good VFO.....Check
it out at my picture site.....$145 plus shippng from Mich....
Thanks Jack K8BVJ

Hello
I have a Zenith Trans-Oceanic Model Y600 SW receiver for sale. It is the type that has the "Wave Magnet" antenna on top. The radio is in good condition with some scuffs on the unit and some missing white paint on the antenna. It works well but needs some tuner-cleaner sprayed into the band selector buttons. Asking $200 shipped anywhere in the US.

Yes, there is a real similarity to the German BLAUPUNKTS, and other Western radios.

When I was last in Yalta (Crimea) in '92, my hotel room had a box mounted on the wall with a speaker, a volume control, and a three position switch. That's how people got "radio" in apartment building, hotels and resorts.

Strangely, about 50 years ago, while in Amsterdam, my grandparents had the same thing in their apartment! They paid a fee. Just like they still do in England, which supports the BBC.

BTW, nobody asked but Yalta is absolutely beautiful. FDR said was his favorite place in the world, and I can understand why.

Howdy.
Well, it's one hot summer up here in Michigan...please send rain!
I have a Hallicrafters HT-19 transmitter which uses a single 4-65A in the output.
The thing even came with an original add from an old CQ magazine, circa 1948.
My question is simple. This appears to be an FM only transmitter, but is designed for the 80-10 meter ham bands! I know that FM is only legal on the upper portion of 10 meters, so was there a time in the past that Hallicrafters was thinking that narrow band FM was going to fly on the 3.5 - 29 mhz portions of the spectrum?
I picked this up for my collection, so not too worried about it being operational, but it sure looks great!
Thanks for reading!
Sincerely,
NS8S
Dave

995. FS Gonset GSB100 Good cond.

For sale, or possible trade, Gonset GSB100 transmitter. All new filters, 5U4 rectifiers, driver and final. A few caps and resistors have been replaced as needed. Front panel lettering great, some paint chips around the screws that mount the unit in the cabinet. The meter has a piece broken on the left side, but does not affect the meter movement. I had it on both 75 and 40 last week, and it worked well. Asking $225.00 plus shipping. JPG's available to serious enquires. May consider a trade for a receiver in the same condition. Hammarlund, Hallicrafter, ETC.
Please reply to : wb6vse@ipa.net
I am located in Arkansas, and can deliver to close by areas.
Thanks
Mike-K5VSE

I have several original issues of the RCA "Ham Tips" that I have saved for many years, they are in excellent condition.

The issues are as follows:

Fall ,1962 " A Nuvistor Converter for 432 Megacycles"

Winter, 1962-63 "A Mobile 50 Watt Transmitter for the Six and Two Meter Bands- Part I"

Spring, 1963 "A Mobile 50 Watt Transmitter for the Six and Two Meter Bands-Part II"

Summer, 1963 "Ham-Band Charts"

Spring, 1964 "A Transisitorized Keyer"

Fall 1964 "A 144 Mc Antenna -Matching Preamplifier"

Winter, 1965-66 "All Transistor Two Meter Converter"

Please make an offer, if interested please contact me directly.

Thanks for reading,
Rich WA8NPR

998. WTB Collins Mechanical Filter

Message-ID: <a6Ka7.2873$V94.269763@dfiatx1-snr1.gtei.net>
Source record: 50942

I need help with this one please. It is a 6 kHz Collins Mechanical filter for the 455 kHz IF circuit of the Hammarlund HQ-215 receiver. The adjacent 2.1 kHz filter has the following numbers F 455 FA 21 6804 and also 526-9427-00. So I would expect a numbering sequence somewhat similiar. It is about 2 1/2 inches long, 0.6 inches high and 0.5 inches (like a small pack of gum) It has two screw studs on the bottom and three small pins at each end that plug into sockets and it is reddish in color. I have digital pictures.
Can anyone please help with first identifying the part number of Collins and second locating one of these things?
Thanks,
Phil

IIRC, narrowband FM is legal in any of the phone bands. Didn't
Multi-Elmac make some FM only xmtrs for HF or were they AM+FM?
Anyway, sounds like a rare find.

Substitute 60 in place of the 21 on the model number and that will
probably be it. The 6804 is a date code. The 526-9427-00 is the
Collins p/n.
I see these things on ebay from time to time...

The filter that you have in your receiver has an input and output impedance
of 100KOhms. The package style is FA. I checked my listing of filters, and
I didn't find anything with a 455KHz C.F., or a Z of 100K. The listing that
I have lists only a couple of hundred filters. You might be able to call
the Filter Products Division of Rockwell, out in Costa Mesa, Ca.
I don't have anything like that on hand. You might be able to retrofit the
526-8695-020 Torsional Mode Filter, but you would need to match the 2K
impedance of this filter to your receiver.

Pete Gianakopoulos KE9OA

This Homebrew GROUNDED GRID amp is in excellant condition. It has a NEW tube in it and an Eimac chimney with a very QUIET blower. Jennings VAC variable for final plate tuning and a very HEAVY band switch and is bandswitched - 160 - 80 - 40 - & 20 meters. With just 18 watts drive on AM I have been using it to the legal limit on AM and it just loafs along! Unit comes with solid state power supply and is controlled with a LARGE VARIAC. THE AMP OPERATES ON 240 vac. It is all installed in a rack cabinet 38" tall and is on casters. THIS IS A PICK UP ITEM ONLY IN MADISON, WI !! Picture via e-mail is available. Any 100 watt ssb transceiver will drive this thing beyond the legal limit and not be pushing it!! $650 or trade for ???

1005. EBC 144 JR.

I have just obtained 3 144 JR.'s, new, in sealed boxes. When I opened all of them for testing, they seem to be off frequency. They all have an output of around 22 watts. I need to obtain instructions for tuning these rigs. Any help would be appreciated.

Thanks and 73's

Dave KA2ORN

Then there's the radio station music studio in "Martians Go Home" which includes a couple of those big old upright *computer* tape drives. Don't think they would be very hi-fi.

Also, movies and TV shows will feature a modern pinball machine, but the sound effects are all bells ringing and stepper switches chugging, which pinballs haven't had since 1977.

And some of those computers shown are supposedly military models, which for good reasons tend to use older, more reliable technology like 80x24 text screens.

> Dave
>

While I wasn't around back then, there was a time when narrow band
FM was touted as the next best thing for ham radio. In the late
forties or early fifties, a lot was said about quite narrow deviation
FM for the HF bands. The idea being that it was a way to get voice
(at a time when CW may have still predominated) without the cost
or trouble of an AM transmitter. It was much easier to FM a
CW transmitter than add a whole modulator chain (and it's associated
power supply). WIth the deviation low enough, it could easily
be received on receivers of the day using slope detection. Or
with a receiver that had an FM detector; isn't that why the HRO-60
has a place for an FM adaptor (or am I garbling something?)? Even
after the concept passed for the HF bands, you'd still see people
promoting it for use on the VHF bands; this was before repeaters
and it was still seen as an easy form of voice modulation which
would be received on an AM receiver.

SSB came along, and became the next big thing. Narrow band
FM on the HF bands was forgotten, except on 10M.

I remember reading that the guy who started Sonar was a ham,
and went after FM for the two-way market based on it's promotion
in ham circles. Remember, there was a time when the "police band"
was right above the AM broadcast band, and I assume used AM.
It was only after the war that things started moving, higher and
to FM.

It is a bit of a surprise that Hallicrafters produced a rig with an FM modulator. My impression was that it was the smaller companies, perhaps Sonar itself, that made a stab at commercial ham FM rigs.

Digging through QST from the era might turn up quite a bit on the topic of HF FM.

>
> Mod iron is one reason SSB got so popular.

If SSB was so great it would have been used more in SW broadcast service.

Anyway, you could use a solid state audio amplifier with a mod transformer with a low impedance winding, or a tube amplifier already extant. Big quality tube audio amplifiers were high dollar back in those days, of course, and still are, but if you already had one you wouldn't have to mess with it.Big cheap solid state amps that are actually very good sounding as long as they are making power are readily available today of course.

Insertion losses should be less than one dB in correctly designed transformers, I would think.

Yeah, it's great fun showing how smart you are to some guy working the
Radio Shack counter.

A bit of net research at the RS site would have turned up the Alpha
Delta dipole kit, Cat.#: 940-0023, for $30. Or the Alpha Delta Sloper
Antenna kit, Cat.#: 940-0024, for $70.

Of course, the RS site is pretty dumb too; it doesn't come up with
anything when you do a search on "eggs".

Next time you go into RS, why not try to get a coherer?

Ed

Well, my response point was that the guy was taking a cheap shot at a clerk who can't be expected to know 40 years of technical details in all of the product lines that RS handles (the name Radio Shack notwithstanding). I often go into RS looking for something esoteric, but I try to remember that it's my responsibility to translate my need into something a contemporary clerk can understand. Once they understand your application, I have found that most RS clerks are very helpful and sometimes come up with a stock suggestion that I hadn't considered.

Finally, remember that RS is a mass marketer. The great majority of their customers are not in need of vacuum tubes or dipole insulators. However, you can find a huge amount of stuff, available through their web site, that never is placed in their stores.

Good salespeople in any store seem to be increasingly difficult to
find. You have as good a chance in RS asking for something thats
hanging on the wall and being told "we don't carry it" as you do any
place else.

What you have there is an old Grid dip meter... Triplett called it an Absorption Frequency meter See attached add:

Triplett ABSORPTION FREQUENCY METER Model 3256

a.. from the Triplett advertisement p115, 1952 ARRL Handbook, 29th Ed.
A band-switching tuned absorption frequency meter that covers 5 Amateur bands. Has Germanium crystal, and a DC Milliameter indicator, for greater sensitivity. Direct calibration on panel-no coils to change. Switching permits instantaneous broadband change. Audio jack provides for monitoring of phone signals-another new feature. Calibration is in megacycles in the following bands: 3.5-4 MC; 7-7.3 MC; 14-14.4 MC; 21-21.5 MC; 28-30 MC. Coil is removable, and other coils may be substituted for special bands. Use for checking: Fundamental frequency of oscillating circuits; Presence, order, and relative amplitude of harmonics; Parasitic oscillations, etc. Size: 7 1/2" x 2 1/2" x 2 1/4". Metal case with gray hammertone enamel finish & black trim.

No the clerk has no interest on what "I" was looking for:
He broke my balls trying to cell me a cellphone plan then a DSS, then a
alarm system, then a Opt online ...JEEZ !
He went on and on.....this was worse than a telemarketer !!
THEN he finally asked what I was looking for.
I am entitled to have some fun for being hassled like that.
This high pressure wise-guy salesman actually followed me around the store
with a clipboard of offers.

When telemarketers called I just hand the phone to the 3 year old

(now Illegal in New York) if you on the No Call Registry
Register: http://www.nynocall.com/resident.htm it works !

From: Phil and Nancy Young <pyoung@iland.net>
Message-ID: <tms2rjgar8d43a@corp.supernews.com>
Source record: 50698

This weekend, trustees of a local antique dealer held a two day auction, liquidating much of his "less valuable" inventory. This gentleman, a local businessman in Butler, Missouri, had apparently purchased the left over junque from the closed Henry Radio Store here in town.

Among the items were cases of unopened variable condensers, tubes, coil sets, partially completed amplifier chassis, Collins and Kenwood display pieces, antique and war surplus units -- just a lot -- I'm not joking -- a lot of stuff. This would keep you in flea market items for years and years.

Now to the heading "lots of self control." I said to my wife -- "Lets get out of here!"

And I did.

Bought nothing.

Is that cool -- or pathetic?

Some times I attend hamfests and computer shows not only to enjoy and maybe shop, but also to test my self control.
I must say I can control myself 90% of the times...but there is always that 10%

As far as it- being cool or pathetic? Dont know

Gil

HA! Who does Phil think he's kidding?
There's no big "self control" here.
It was a matter of survial-
He even admits it.
His WIFE was there!!!
He just didn't want to take a beating when he got home!

With 11 pin connecting cable. They were designed for the 100W Heath transmitters , but will work on a KWM-2, if the wiring is changed on the cable, as well as other 100W tube radios.
Excellent condition.

Previous posts seem to refer only to 'plate modulation' (or plate+screen
modulation) including the "Heising Modulation" method using a choke
common to the PA plate/s and modulator plate circuit?
What about cathode modulation of the PA tube/s? Cathode impedance would
be??????
Also, with pentodes; suppressor grid modulation!
Just an idea! Terry.

Source record: 50717

Need the schematic for the B&W 5100 B. Tried W7FG but he only has the 5100 and I'm not sure how many changes were made when upgrading to the B model. I also know about the BAMA site but the schematic is not in printable format (it's in jpg format) Therefore I would like a schematic or a copy of a schematic, not even a manual necessarily, for the 5100B. Please email direct with ideas of where I might find one?

Incidentally: Problem is slowly rising (until it's off the scale) modulation current. Suspect something to do with bias of the modulators (6146's) Anyone with familiar with troubleshooting the 5100B?

Thanks Brian, K3VR

This Homebrew GROUNDED GRID amp is in excellant condition. It has a NEW tube in it and an Eimac chimney with a very QUIET blower. Jennings VAC variable for final plate tuning and a very HEAVY band switch and is bandswitched - 160 - 80 - 40 - & 20 meters. With just 18 watts drive on AM I have been using it to the legal limit on AM and it just loafs along! Unit comes with solid state power supply and is controlled with a LARGE VARIAC. THE AMP OPERATES ON 240 vac. It is all installed in a rack cabinet 38" tall and is on casters. THIS IS A PICK UP ITEM ONLY IN MADISON, WI !! Picture via e-mail is available. Any 100 watt ssb transceiver will drive this thing beyond the legal limit and not be pushing it!! $650

Yes, National got into that promotion, put some money behind it, lost it.

>with a receiver that had an FM detector; isn't that why the HRO-60
>has a place for an FM adaptor (or am I garbling something?)?

Yep, I have a beater HRO-60 that even came with the adapter plugged in -- well actually someone put in a homebrew SSB adapter (product detector). But the socket is there, and the function knob says FM.

>after the concept passed for the HF bands, you'd still see people
>promoting it for use on the VHF bands; this was before repeaters
>and it was still seen as an easy form of voice modulation which
>would be received on an AM receiver.

Yes, there was an article in the Ham section of Popular Electronics on adding a varicap diode to any of the popular 6-meter xcvrs (Knight, Lafayette) to convert to FM, even though these rigs already had plate modulation built in. The idea was to reduce TVI, and maybe have your call sign less audible on the TVs you did affect :-)

Interesting that cheap and simple FM was shoved aside by SSB, which is neither. I read somewhere that NBFM suffered theoretically because the S/N ratio goes down as the BW is narrowed -- so when an FM signal is squeezed into a narrow AM BW, it isn't very good against QRN. Wouldn't know myself. 2-meter FM is wider deviation, like 15 KC or more, and broadcast FM is 150 KC wide.

BTW, Drake R8 series rx have FM built in, probably 15 KC deviation.

I have a 5100-B schematic, though the schematics may vary a bit depending on which manufacturing run you have. Anyway, let me know how I can make a copy and send it to you.

As for the modulator, the service notes say:

Check bias voltage; it should average a constant 65-70 volt.ts minus, depending on the AC line voltage. Check selenium rectifier (SR501). Checkfilger capacitors C518 and C519, also resistor R509 for correct values. Check entire bias circuitry and assocxiated components for shorted or open circuit. Check and replace R522 if value has changed.

Steve, W3DEF

PS You should get a ciopy of the manual and the service notes. Try Pete MarKavage, 27 Walling St., Sayreville, N.J>, 08872-1818. The last phone number I have for him is 732-238-8964.

As I wrote that, I wondered if National had actually made an FM
adapter, or just put in the circuitry for such an adaptor. I admit
that I didn't go looking through old QSTs to check. The reason that
the adaptor socket comes to mind is that someone wrote about an
SSB adaptor that took advantage of that socket and switching,
and it was in one of the ARRL SSB Manuals (though I can't find the book
at the moment) and presumably in QST before that.

I seem to recall reading something about narrow FM on the HF bands,
and the idea was to make it very narrow. I wish I could remember
what was said, because there seemed to be something beneficial
to the very narrow deviation beyond saving bandwidth.

One of these days, I'd like to play with 10M FM. It's always
intriguing to have an FM signal snap into full quieting when
it comes into range or propagation changes, and 10M has a lot
more opportunity for chaning propagation than the higher bands.

Hi There
I have just done a shack clearance and have come across the following BRAND NEW old time Yaesu Accessories, They comprise of the following.

BRAND NEW YAESU YO-100+RX Board
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1262290155

BRAND NEW YAESU SP-101B Speaker
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1262291904

BRAND NEW YAESU SP-101B Land-liner Speaker
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1262293818

AS NEW Heathkit SB-303 Receiver **Loaded*
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1262295728

I thank you for reading this post

Does anyone remember the days when you had to have a Conelrad station tuned in on a BC radio if you were on the air? I was too young at the time for this to really frighten me, but looking back now......yikes.....talk about waiting for the bombs to fall...

When I was in grade school, we had weekly air raid drills! The alarm
would sound, and we'd all get up from our desks, file out into the
hallways, and crouch down against the wall in a "kiss you butt g'bye"
position for a couple of minutes, then the "all clear" would sound
and we'd return to class. Scary times....

Bob,

I sure do remember. This was still in effect when I was first licensed in 1954. What most of us did was take an old radio and install a switch on it to route the output transformer secondary to a #48 light bulb. As long as the bulb was flashing, the station was assumed to be on the air. You didn't actually have to listen to the station, nor did you need an automatic transmitter shutdown.

But yes, those were tense days, when people were building backyard bomb shelters and the like. Eventually it was realized that no defense was really possible. The only other time I recall such tension was not quite ten years later during the Cuban missle crisis. I don't think most people realize just how close we came.

It should be more than adequate to begine with Bob. The T-50 uses a 6AG7 as the Osc/Buffer, and I forget what the output is on the VFO. Id say replace them, or if you have a tester check them.

One other thought is the cable between the two may be defective (age, wrong type, etc.) Replace it with a hunk of coax and see how it matches up then.

Yep, but you've got it backwards. CONELRAD (CONtrol of ELectromagnetic RADiation) only came on in an emergency ("640 and 1240 on your AM dial"). You monitored a commercial broadcast station, and it if went off the air, you had to QRT immediately. Then, you would gather your family in the fallout shelter, and tune in CONELRAD to find out what was going on.

Source record: 50748

I worked in radio station as a teenager, and I remember the CE explaining that the FCC figured out that there were a lot of stations on 1230 and 1240 (one or the other in any market) so that all the stations in the Conelrad network which were licensed ABOVE about 1100kc would retune to 1240, and all the stations 1090kc or below would retune to 640.

The "graveyard" channels ...1230, 1240, 1340, 1400, 1450 were low power (250w max in those days) so they'd cover small communities, while 640s (who werenormally on Class I, and II frequencies would pump out 10 kW or more. Even if the antenna matching was poor, enough signal would get out to reach the huddled masses.
I don;'t recall watching for a flashing light on the audio output of an AM radio, but Heath built a device which lit up whenthe carrier disappeared...it was in the AVC circuit, and you didn't have to monitor audio, just carrier.

Miratel built an early rackmount radio which we tested by de-tuning it off the station. It had a doorbell in it, I think, or maybe that was just our CE's attention alarm.

EBS and the new EAS are just later developments,...it has not gone away, but today it serves to warn us of tornados (tornadoes?) and toxic fuel spills, etc..
They could use it to evacuate a city from a terrorist attack too. The double-T threaths are much more scary than the bomb

I did try replacing the 6AG7 in the T-50 as well as the bulb in the
HG-10 to no avail. Upon getting a copy of the manual for the HG-10 I
find that it is speced at 5V rms output (about 7V pk), while the T-50
claims to need 8 to 10V (no rating so I assume it's also rms). So it
looks like the HG-10 may be somewhat marginal.

The cable appears to be ok but I'll try another to eliminate that.

Thanks for the input.

>Just an idea! Terry.

Hello Terry,

The impedances of the various other forms of modulation (cathode, grid, screen, suppressor) depend on the tubes used, but in general are much higher than the typical 4/8/16 ohms. In addition, cathode modulation requires that the mod iron carry the full cathode current of the modulated stage.

The reason the discussion has centered on plate modulation is the high audio power requirements of that method. The use of an existing audio amplifier for plate modulation saves the expense and trouble of building a modulator capable of half the power of the modulated stage. For example, a 50 watt mono amplifier could be used to plate modulate a 90-100 watt Class C stage if the apppropriate transformer can be had.

But the other forms of modulation require negiligible audio power - a watt or two at most, in the case of grid, screen, suppressor or clamp-tube modulation. Cathode is similar. The tradeoff is very low efficiency - you can;t get more than about 35% efficiency in the modulated stage. This leads to very low power output from a given tube lineup.

For example, a plate-modulated pair of 811s can be run at 360 watts input, and with a 180 watt modulator will deliver 250 watts or so of carrier. But the same pair of 811s in cathode or grid modulation can only run at about 165 watts input, and will only deliver about 55 watts of carrier. One-fifth the power from the same pair of tubes!

>for
>the bombs to fall...

Like waiting for AOL to figure out how to quote messages (see above)?
Seriously, I was a new Ham in high school when you supposedly had to monitor a
local station while operating, and Heathkit or somebody tried to sell a box
with a BC radio and a relay, that you could plug your tx into and it would cut
you off the air if the station went down. Their ad implied that every ham
ought to have one.

Me, I figured that if the nukes started flying and I kept on ragchewing long
enough for some FCC monitor to hear me, that after it was over both I and the
Federal govt would have more important things to worry about than my violation.
So I paid it no mind.

At my QTH, our only worry was fallout from Pittsburgh and Altoona.

I did acquire a few years ago, a Kaar Conelrad monitor. It's a fine BC radio,
with three switch-selected AM stations, tuned by screws and slugs, including an
RF stage. It has switch positions for 640 and 1240 KC along with the three
user-tuned stations.

>
> If SSB was so great it would have been used more in SW broadcast
> service.

Not at all. The added complexity required at the receiver, and the
loss of audio quality, nullifies the advantages of SSB for most
broadcast use. Hams are a different story - we're not allowed to send
music, and we cannot simply increase power (legally) like the SWBCs
can.

SSB became popular with hams because the results a ham could get on
SSB with a station costing X dollars were better than the results a
ham could get on AM with a station costing X dollars. Particularly
when X got large enough for high power.
>
> Anyway, you could use a solid state audio amplifier with a mod

Agreed. The idea is found in ARRL's "Hints and Kinks" of the '50s.

> Big quality tube audio amplifiers were high dollar back in
> those days, of course, and still are, but if you already had one you
> wouldn't have to mess with it.Big cheap solid state amps that are

Yup. The trouble is coming up with the mod iron. If it has to be
custom made, one might as well go whole hog and build the whole
modulator.
>
> Insertion losses should be less than one dB in correctly designed
> transformers, I would think.

One dB can be a lot of audio watts, though.

1148. FS: Johnson Ranger I

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-08-08 22:28:07 UTC
From: Doug Hall <k4dsp@pobox.com>
Message-ID: <hre3ntslodglpus98rg1smccdmshnkp3jv@4ax.com>
Source record: 50792

Hi all,

I have a nice Johnson Ranger I transmitter for sale. You can see photos of it at:

Front view:
http://dhall.50megs.com/hamstuff/Ranger_fnt.jpg

Left front view:
http://dhall.50megs.com/hamstuff/Ranger_ltf.jpg

Right front view:
http://dhall.50megs.com/hamstuff/Ranger_rtf.jpg

Rear panel view:
http://dhall.50megs.com/hamstuff/Ranger_rear.jpg

The Ranger I was manufactured in the late 50s, and covers 160-10m, AM and CW. This one is factory wired (not built from a kit) and works perfectly on all bands. There are no mods - it's stock as far as I can tell. It does have the sequence grid block keying circuitry, so it's a later production model. It appears that the cabinet has been repainted, and the color is correct. There is normal wear and some minor scratches on the front panel, all visible in the photos. It puts out 40 to 50 watts from a single 6146 final and is plate modulated by a pair of 1614s. If you want to hear it on the air, drop me a note. I'll be happy to meet you on any band, AM or CW. Includes a photocopy of the manual. It's not "mint" nor would I consider it collector quality, but it is a nice, properly working Ranger I, and is ready for you to put it on the air and start enjoying it.

$275 plus shipping from 27612 or I'll meet you within a reasonable distance of Raleigh, NC (preferred). Drop me an email if you're interested.

Regards,
Doug, K4DSP

The idea behind Conelrad was to kill all sources of RF to prevent them
being used for navigation purposes by bombers. Consequently, you did
NOT want to be the last guy to go QRT in your area. 8-)

1154. FS: BC-375 plus tuning units and more...

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-08-08 23:36:25 UTC
From: Chuck O'Neal <coneal@ultranet.com>
Message-ID: <9ksifilcc1@bob.news.rcn.net>
Source record: 50646
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

An Excellent BC-375E with 9 plug in
tuning units. All (except one) tuning units
are in excellent condition and half of them have
never been used. Included are:

TU-5-B (three) 1.5 - 3.0 MHz
TU-6-B 3.0 - 4.5 MHz
TU-7-B 4.5 - 6.2 MHz
TU-8-B (two) 6.2 - 7.7 MHz
TU-10-B 10.0 - 12.5 MHz
TU-26-B 200 - 500 KHz

Also included is the antenna tuner, the
BC-306A, also excellent. All tubes are
included and are good. Four spare NOS
VT-4C's (211's) are included also !!!
(a total of 8 VT-4Cs) I have
the original instruction book for operation
and maintenance as well (excellent).

The rig, tuner, and all tuning units are
unmodified. All these are in exceptional
cosmetic condition, except one of the
TU-5-'s which is fair.

Due to the amount of "stuff", this is pick
up only or I may meet you up to 100 miles
from Bolton, MA. Total price for all
is $695.

Thank you. That's what I said in the beginning.

nullifies the advantages of SSB for most
> broadcast use. Hams are a different story - we're not allowed to send
> music, and we cannot simply increase power (legally) like the SWBCs
> can.

That's why I'm not a ham. I am a "radio amateur" (and indeed a former
radio professional) in that it's a hobby, but not in the Amateur Radio
Service. We have things in common however...

> SSB became popular with hams because the results a ham could get on
> SSB with a station costing X dollars were better than the results a
> ham could get on AM with a station costing X dollars. Particularly
> when X got large enough for high power.

The same with chicken bndis, which were he real subject of my initial
ire.

I like good audio and find SSB irritating. I would put up with it as
a useful work tool, but not for fun.

I don't own one, but I looked at the schematic. Assuming your relay is working, your problem is with either R18 (100k) or R38 (330k), or C19.

The muting contacts affect the gain in two stages of the 50.75 kHz IF stages.

If R18 or R38 are carbon (not composition) one of them may have gone down in value which can cause your problem. Also, if C19, the cathode bypass cap, is shorted, it that will cause the same effect.

Put a voltmeter on pin 2 of V4 to see the affect of your relay opening and closing. It looks like there should be nearly +140 volts with the relay open, and about 20 volts with the relay providing a short across the muting terminals.

Why are you sure you don't have stray RF pickup in the audio amp that's causing your problem?

Good luck

Don

>SSB adaptor that took advantage of that socket and switching,
>and it was in one of the ARRL SSB Manuals (though I can't find the book
>at the moment) and presumably in QST before that.

Well, that's a good question, whether National ever got around to manufacturing the FM adapter, since I'm now pretty sure taht what's in my HRO-60 is an SSB adapter, probably built from those very QST plans.

>I seem to recall reading something about narrow FM on the HF bands,
>and the idea was to make it very narrow. I wish I could remember
>what was said, because there seemed to be something beneficial
>to the very narrow deviation beyond saving bandwidth.

Yes, what I read somewhere is that the folks promoting very-narrow FM were claiming this, but the theory turned out to support *wider* BW, so FM is now pretty much restricted to 15 KC deviation or more.

>One of these days, I'd like to play with 10M FM. It's always
>intriguing to have an FM signal snap into full quieting when
>it comes into range or propagation changes, and 10M has a lot
>more opportunity for chaning propagation than the higher bands.

ISTR that at one time, maybe the '70s, FM (15 KC) was the preferred mode for 10M -- cheaper and cleaner than AM, and few TX or RX back then had the stability to tolerate SSB for very long.

hello,

i am in need of some parts for a hallicrafters s-38c receiver.

first, i need one of the small, black knobs. this one will be for the on/off/volume switch on the front.

second, i need the small rubber feet that go on the bottom of the rig.

next, i need the bottom and back cover to the radio, as mine are missing.

any help with these items will be greatly appreciated, so please email me with what u have.

also, anyone know where i can find a manual?

FS Johnson Viking Ranger.....My classic Ranger from the 50's is up for grabs....works great on AM & CW on all bands using my external VFO or Xtal's...The built-in VFO is low on drive on some bands...instead of tearing into the VFO compartment I decided on an externl VFO for operation...The all-famous screen rsistor that gets hot i the VFO is mounted away from the vfo componants....Some of the old caps in the power supply have been changed....The Ranger does have the push to talk relay option
Over all not a bad Ranger which could use some fixin or just use it as is.. Comes with a copy of the manual $290 plus UPS/INS shpping 58 lbs shipping weight
(check out all my pictures 2 pages

http://community.webtv.net/k8bvj/Ranger

FM has been around for a long time. At one time wide band FM was allowed in all of the phone parts of the HF bands if I remember right. Now it is not. Most of the FM that is in use on the ham bands today (10 m and up) is +- 5 kc deviation. This gives a bandwidth of 10 kc. The 15 kc is usually the width of the receiver IF filter. This provides some space on either side so as not to clip the signal and cause distortion. The sidebands generated by an FM signal theoretically have infinite bandwidth but fall in amplitude the farther out you go. This is the reason

that you need a little wider filter than the actual deviation is.

This bandwidth started in the early 70s ?? Before that the deviation was 25 kc if I remember right. During the transition time to 5 kc deviation, the 5 kc was called narrow band fm and the 25 kc wide band fm. This followed the commercial 2 way bandwidths. Now some of the commercial bandwidths are +- 2.5 kc deviation.

The +- 5 kc deviation is different from what is known as narrow band fm on the HF bands. +- 5 kc fm is only allowed in the fm portion of 10 meters and on no other HF bands below that.

What is allowed in the HF bands below the 10 fm portion in any of the phone bands is the narrow fm or phase modulation which has a bandwidth no wider than an AM signal.

The wider bandwidth the fm deviation is the better the signal to noise ratio. With the very narrow band phase modulation that is allowed on HF the signal to noise advantage is very little different than that of an AM signal. You can do some limiting to reduce pulse type noise but it is not very effective as it is with the wider deviation. AM has an advantage over the narrow fm signal as the audio power is added to the signal where in the fm signal the audio power is taken away from the carrier.

The reason that FM has remained popular in the commercial 2 way systems is it is much easier and more compact to build an fm transmitter than an AM transmitter. It does not require the bulky modulator or the extra power to go with it. The noise reduction in the receiver is much easier to accomplish. Even though FM is a less efficient weak signal mode than AM.

There is some good info on phase modulation in some of the older handbooks

Because hams can't run more than 1500 W PEP output? How much would be
enough for you?

> I am a "radio amateur" (and indeed a former
> radio professional) in that it's a hobby, but not in the Amateur Radio
> Service.

The term "radio amateur" means a person who holds a valid amateur
radio license. The term "radio hobbyist" is more accurate to what
you're describing.

> We have things in common however...

Yup.

I missed that.
>
> I like good audio and find SSB irritating. I would put up with it as
> a useful work tool, but not for fun.

Same here. While SSB is "effective", I find it tiring to listen to for long periods. It's actually easier for me to copy 30-40 wpm Morse code than to listen to SSB, particularly heavily processed SSB.

AM is making a comeback on the ham bands in a big way, though. Lots of AMers on 3885, 7295 and a bunch of other frequencies. Most have really good audio.

Old BA and military gear has jumped in value as more hams are putting classic old sets back on the air. Some are building entire new AM transmitters from scratch. Others have acquired retired AM broadcast transmitters and have converted them to 160 and 75 meters.

Some folks complain about the spectral inefficiency of AM on the ham bands, and when things are crowded they have a valid point. But the typical AM QSO that I hear is a multi-station roundtable, so the spectral efficiency has to take into effect the number of stations using the channel. If there are ten AMers taking up 6 kHz of the band, it can be thought of as 600 Hz each. In other words, the real question of spectral efficiency in ham radio is "How many hams can use the band at the same time?"

Yes: Was aware in a general way of these considerations but just wanted
to bring it out, if someone was trying to get 'on air' with AM, there
might be a simple although less efficient alternative.
As Jim indicates the transmitted signal is going to down some 7 to 8 db!
But bung some audio into the PA, some how, even if you lose most of it
through some sort of matching 'pad' circuit, or weird transformer
arrangement and you may get a 'usable' AM signal despite other
disadvantages, at little cost?

A memory sticks in mind from somewhere, ages ago, (late 1940s maybe?)
that one amateur plugged some audio modulation into the key jack that
was in the cathode circuit of his PA (he was probably running the UK 100

to 150 watts) and lo and behold it worked. AM modulated signal! Nothing was said about efficiency, depth of modulation, quality of the audio etc. Also I believe there was one W.W.II transmitter that modulated the PA suppressor grids through a transformer, but otherwise directly, from a telephone handset type carbon granule microphone energized by DC. Neither efficient or good quality I would think?

Some of those AM modulated signals of the 1950s were really good quality. I recall listening to the VKs rolling in to northern England as I was getting ready for work in the mornings! And the American kilowatts, often later in the day, high power, good quality signal, but sometimes with a slight 120 cycle hum. 2000 volt HV caps in power supply were expensive! And the less said about some of the AM from some other European stations in those days of homebuilt transmitters; well, better the less said!

Thus we are back to the basic argument about the 'greater efficiency' of SSB, I think!

Thanks to Jim N2EY, for the detailed comment; much better than I could have done it. Terry.

So what? We get that in Texas, daily, every summer. But we're smart enough to air condition the hell out of the state. I lived for 25 years in Houston, where the Desert Mean Temperature averages are actually higher than those of Death Valley. But it was never a sweat, because we air condition things down here.

San Antonio, Austin (where it was 100+ for 20 straight days this summer), Dallas, hell, we deal with it.

What's wrong with you New Yorkers?

They SHOULD BE:
Yellows=30 mfd...
the lead that traces back to pin 8 (cathode) of the 35L6 will be the 20
mf
and the remaining one will be the 40mf.
Black is the common negative.

FS: AN/GRR-5 military shortwave radio HF (1.5-18mhz coverage)
receiver. It comes with its mounting
base also and will run in both portable, mobile or AC power. Unit
is unchecked but appears complete and
unmodified. I also have a R-109/GRC VHF receiver to go as part of
this package. These were sold but
buyer never came through. These are the only radios left out of
this estate. $125 for both radios.

Dave:

Just where do you live to get anything like that sort of electrical
rate?

Last time I had a window air conditioner, it cost about $4 per day,
running only 8 or 10 hours each day, during the hottest time. This is
over $120 per month, so I'd be interested in how you could run one for
$30 per year.....

Thanks

OK Guys......
Looking for a part for a Drake C line receiver......would be the same I think in the transmitter.......
this receiver......16,000 serial number.........nylon gears etc.....well you turn the knob one way and all is well.......you turn the knob the other way and the knob makes one full revolution before it catches and turns the dial.........after that it is fine until you again decide to turn the knob the other direction.....and then its the same story one revolution before you get to move the dial.......
So...two questions.......
#1....what is broken?.....
#2.....anyone out there have a parts rig that would have what we need to repair this one?......
thanks
take out the NOSPAM thing in the E-Mail if you reply direct......

In my parts...lets say a big 'window' unit does 10 amps at 220. Yeah,
it runs compressor 'on' darn near full-time since its a window unit and
only gets utilized part time and has to cool down everything.

2.2 kw x 8 hrs/day. (That gives me 4-6 hours of cool 8x10 bedroom).
17.6 kwh/day * 0.15/kwh rates = 2.64/day * 30 = $80/month to cool a single small room without a rack of R-390s running.
I know you are in Dallas, so how do you accomplish this for $30/year? Feel free to add some of your own fudge factors to my estimated numbers. Does it have something to do with breaking the seal and plugging the meter in backwards?

Puzzled-

Hmmmmm.... Now that's an interesting idea.

Bill, I'll take your word on your figures. I've
never calculated it. Just went by the EPA sticker on some
small units I buy for my equipment shelters on the railroad.
Maybe it was $300 instead of $30... I'm capable of misplacing
a decimal point, especially when I'm being a smartass ;-).
I do know that my kinfolks in sweltering Louisiana have
window units, and an electric bill of that size would
be impossible to pay. But they seem to pay their bill
each month. I'll try to remember to ask them how much it is.

I am interested in locating detailed alignment instructions for a Heathkit SB104A. I have the assembly manual which specifies use of the radio's S-Meter to allign the unit, but would like to find more complete alignment instructions providing for the use of standard test equipment.

David:

Well, when I last ran one, I lived in San Jose California, and the rate was around $0.14 per KWH, though the unit seemed to affect the bill more than it should have... As one might imagine, the compressor runs full time when the unit is on, so getting a decent temperature in a large bedroom used as an office was a chore, even without a lot of extra load.

Now I'm living in Hawaii, and my monthly bill runs about $0.22 per KWH, but I live where air flow is used to cool the home, (though I'm not running a big amplifier, nor lots of tube equipment, so it isn't much of a problem).

CQ AM'rs Nr Virginia
This Collins 20V2 I salvaged from a radio station in Richmond Va. several yrs ago. Been collecting sheet metal, iron & stuff since w / goal of putting on 160m - 40m. Is most complete now but will require LOTS of work (mice damage) & painting. It will require re-engineering to convert to anything but 160m. 160M is easy.

I dont have the time with all the other things I'm doing to get to this rig. It needs a home including a skilled restorer, AM buff. I hate to part it out. Asking $700. & will consider some trading. I restore Johnson, R-390(A), some Hammarlund. Always need Rangers & Valiants.
Of coarse, you will have to come & get it. Pics of anything available w / accurate discriptions.

Anyone interested in an SR-150 Hallicrafters transceiver in the Detroit area? You will have to pick it up or arrange to have it picked up and bring along $100 in CASH. It will not be shipped, period.

The radio has the AC power supply, it receives pretty good and puts out about 50 Watts. I worked a few people with it USB and LSB and got good reports. It is slimy with tar/nicotine and probably needs alignment and a few tubes. Cosmetically, needs serious cleaning but very few nicks, etc. Missing the RIT on-off knob but otherwise all there, but no books. Info available on the BAMA site. No modifications that I can see, looks like no one has had their fat fingers in the wiring since it was built.

REPEAT: pick up only and the price is $100.

>it can be thought of as 600 Hz each. In other words, the real question
>of spectral efficiency in ham radio is "How many hams can use the band
>at the same time?"

This is a very good point, and one I hadn't heard or thought of before. I also agree that in my limited AM operating experience (Viking II), the typical QSO picks up around 6 stations at any one time. SSB QSOs tend to run maybe 3 on the average.

But one big advantage of SSB in a roundtable is that two or more ops can speak at the same time, and the listeners just hear them all together, just like talking in a big room. No carrier hets, or the gawdawful fuzz that two FM signals ca do to each other.

Yes, AM hams do strive for really good quality sound. And a lot of SSB signals aren't so clear and crisp, and some SSB receivers make everything sound pretty pinched. But I've heard some SSB on my SX-117 that I would gladly copy all night. Like anything else, it depends on the gear at both ends. 73, Mike K. AA1UK

Source record: 50640

I hate to bring up this *modern* stuff, but you can buy sets of QST on CDROM from the ARRL at very reasonable prices. I bought 1960-1964 a few years ago at a ham fest. Unlike some compilations, these CDs include *every page*, ads, covers and all (admit it, the ads are often the best part of old mags :-).

There's also a comprehensive cross index with a search feature. It's easy to look up reviews for the HQ-180 or whatever.

OK, I just dug out my 4-box set. It's called QST-View, published by the ARRL and cost list price $39.95. OK, so that's not so cheap, but maybe I got it for a lot less at the fest. 73, Mike K. AA1UK

Bob, you are on track with the relay , it will un-plug ,then you can spread the plexiglan cover and remove it,use a small knife blade ,put some contact cleaner on the contacts ,cut some 1/4 " strips of brown paper and pull the paper strips through the space and accross the contacts . works every time 73 Harold W4PQW

An Excellent BC-375E with 9 plug in
tuning units, matching tuner, spare tubes,
and original manual. All (except one) tuning
units are in excellent (NOS) condition.
Included are:

TU-5-B (three) 1.5 - 3.0 MHz
TU-6-B 3.0 - 4.5 MHz
TU-7-B 4.5 - 6.2 MHz
TU-8-B (two) 6.2 - 7.7 MHz
TU-10-B 10.0 - 12.5 MHz
TU-26-B 200 - 500 KHz

Also included is the antenna tuner, the
BC-306A, also excellent. All tubes are
included and are good. Four spare NOS
VT-4C's (211's) are included also !!!
(for a total of 8 VT-4Cs) I have
the original instruction book for operation
and maintenance as well (excellent).

The rig, tuner, and all tuning units are
unmodified. All these are in exceptional
cosmetic condition, except one of the
TU-5-'s which is fair.

After advertising this for local pick
up and not receiving any real interest,
I'll ship it CONUS, but it will take a few
boxes and shipping will cost a bit depending
upon your location. Price $695 for all, plus
shipping. $595 if you pick it up or meet me
within 150 mi of Boston, MA.

The earlier version of the set had a lamp connected to a test coil in the PA
stage by a 'test' button - I think spare bulbs fitted into this bit...

In addition, there is a known problem with grounding
of the AF board, where the board tinplate meets the
aluminum heat sink. You might check to see if small
star washers were added. Also the antenna relay is
under a metal can at the rear below the PA section.
I don't believe the relay on the AF board unplugs.
This relay switches voltages that drive numerous diode
switches and bias voltages throughout the radio.

Jim, ac6tk
http://www.cybertime.net/~ac6tk/station.htm
http://www.cybertime.net/~ac6tk/svs.htm

: Bob, you are on track with the relay , it will un-plug ,then you
can spread the
: plexiglan cover and remove it,use a small knife blade ,put some
contact cleaner
: on the contacts ,cut some 1/4 " strips of brown paper and pull the
paper strips
: through the space and accross the contacts . works every time 73

Want to buy two of the small knobs from a Hallicrafters SX-130 (or S-129 also). I just bought a "very good" SX-130 from a guy in Dexter, Michigan and what he was able to hide in poor digital photography he was able to lie about in his description and the poor 'ol thing is a mess. I know...I know...caveat emptor. Sorry guys, but I am growing weary of the scammers on eBay.
Anyway, if you have two of the knobs used on the volume control and band selector I would be grateful to be able to buy them so I can restore this 'ol girl to her former glory.
Thanks.

What I have been able to find so far was everything but the schematic. I have pages 1,2,3,4 but there is no schematic on those 4 pages. I will let you know if I come across it. Meanwhile, let me have your address or a fax number and I will be happy to send what I have found so far.

I know with mine I had to scrap the band switch and tube sockets then it started operating correctly. It still operates well but hasn't been turned on in a couple of years. I guess I should do that...oh by the way, I also added an additional cooling fan to it.

This radio is in excellent working condition with original manual and
carton. I purchased it new about 1989 from Universal Radio (Ohio).
I'm selling it because I've purchased a new shortwave receiver.
A Murata wide AM filter was dealer installed, otherwise stock.

HIGHLIGHTS...

Coverage: 90-34000 KHz
Voltages: 100/120/220/240
Modes: AM/SSB/CW/RTTY/FAX/FM
Readout: Digital Fluor. to 0.01 kHz
Circuit: Double conversion
Weight: 19 lbs.

FEATURES:
ï¿½" Headphone Jack, S-Meter, Attenuator (ATT), Noise Blanker,
Mute Terminals, ANL, Line Out Jack, RIT, BFO,
Automatic Gain Control (AGC), Pass Band Tuning (PBT),
Notch Filter, Speaker Output, Keypad, 200 Memories,
Up-Down Tuning, Tone, Radio Frequency (RF) Gain

Comments: Memory stores frequency, mode, bandwidth, AGC and
ATT. Two antenna connections.

Price $430 + shipping (Sorry but I will not ship outside of the United
States)

Or call 510-583-1844 between 9 AM & 9 PM (Pacific time). Ask for Erik.

Source record: 50581

Looking to buy two knobs from a Hallicrafters SX-130. These knobs also were used on the S-129 receiver. Knob is made of grey plastic with a "chrome-like" insert in its center. There was also a 0.08 inch white dial "pointer" indice on the ridge surrounding the knobs outer extremity. The knob is 1.14 inches in diameter, and 0.50 inches deep. A single set screw held the knob in place. There were two sizes of knobs used on these receivers, the larger tuning knob for the main tuning and bandspread and these...used for band selector, volume control etc.

I will be happy to email you a JPG picture of the knob I am seeking. Thanks so much!

Hey!

Perhaps not a boatanchor, I don't know. But :

Does anyone has any information about the receiver "Standard Radio CN-302" ?

Pictures ?
Preformance ?
Coverage ?
Web sites with information ?

Kind regards

Nils

1300. FS: Lafayette HA-600A

Newsgroup: rec.radio.amateur.boatanchors

Anybody want it for $30? Works fine, its had a couple transistors
replaced and all the electrolytics have been replaced. Two mismatched
knobs and a big black spot from a power surge underneath the chassis.
Has a non-stock speaker mounted inside the cover.
Overloads very easily on AM-BCB if you live anywhere near a BC station!
SW doesn't seem to be affected.
Overall appearance is quite good...no rust or physical damage other than
normal wear.
Shipping via Priority Mail only....that'll run close to $20 to most US
locations.

1303. SX-28 for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-08-13 16:10:51 UTC
From: John <jh.lewis@worldnet.att.net>
Message-ID: <f_Sd7.44298$gj1.4137137@bgtnsc05-news.ops.worldnet.att.net>
Source record: 50447

I'm selling my fathers Hallicrafters SX-28 (not the A) for him. It is the cabinet model and is in excellent condition. I do not know if it's been 're-worked' or not - it plays well on all bands, so I don't want to take it apart to find out...

The S meter does not appear to work (it switches from side to side on toggling the send/receive switch but does not move otherwise) and the chrome wing on the right side have some damage at the back end. Other than that it seems fine to me...

Price is $340 and would prefer local pick up (St. Louis).

Thanks,

John

1328. FS.BRT400/402 Commn Rcvr.Classic by GEC

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-08-14 10:10:02 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <tnhu558l8s1le3@corp.supernews.co.uk>
Source record: 50472

FOR SALE

For SALE BRT 400/402 Communications Receiver,made by G.E.C.(General Electric Company).

Although these high quality receivers were made in the UK,(where we,radio-exports.com are based),we do not see these sets very often. They were mainly produced in the late 1940's for commercial use.

The impressive SPECIFICATION,is as follows:-

The receiver is a superhet, which uses a total of 14 tubes.
The frequency range covered is 150-385 kcs and 0.51 to 30 Mc's.,in 6 bands.
The effective scale length 41.5 feet per band.(Scales are on edge lit perspex strips.)

Sensitivity <1 microvolt,for 1.5 watts out.

Image Attenuation >30dB at 30 Mc's.
Selectivity.Telephony 5.5,9.0,13kc's. CW, Crystal Filter 0.5,1.0,2.0kc's
AVC 3db change for 100 db change in input.

Outputs 600 ohms 0.2 W,120 ohms 0.05 W,2.5 ohms 2.5 W,15 ohms 2.5 W.
If 455 kc's.
Fitted Signal Strength Meter

Switched Audio Outputs for Speech or Music.
BFO
Noise Limiter.

Power supply uses tube smoothing ,to achieve very low hum levels - no electrolytics are used.
Operation is from 95-130 volts ac or 195-250 volts ac.

The condition of this impressive looking receiver is very good.The front panel is in excellent original condition and retains the original clear lettering.The front panel is not scratched or dented.
The components are original and fully functional.The receiver has not been modified in any way.

The receiver which weighs 72 lbs, is designed for mounting in a standard 19" rack.It is 10.5" high x 14.4" deep.

This receiver has been thoroughly tested and is in full working order.

The price,which includes packing for shipment,Air Freight to the USA,and a copy of the 93 page maker's handbook,
is only $695 US Dollars.

It is worthy of note that last one which we had,which can be seen on our site http://www.radio-exports.com sold for just short of $1200 (and it had a poor front panel).This one came into our stock at a competitive price and we are simply passing this discount on to you.We advertised this a little while back and one e-mail which we received asked "what's wrong with it?".The simple answer is "nothing" it's just a genuine bargain, at $695 inclusive!Maybe we need to put the price up to inspire more confidence!Funny old world is it not?

Anyway, if you would like a little more information,or would like us to e-mail you a picture of the receiver,or indeed if are astute enough to know a good thing when you see it and would like to reserve the set,just let us know and we will do our best to oblige.

Graham Leo info@radio-exports.com

Thank you for your interest.

Greg, I'm sure you know that ER sells a complete set of back issues. It ain't cheap, but it's about to get even pricier. Barry is raising the sub rate, and for a little while he'll sell the back issue collection at the current price but then will be raising it.

It's a wonderful pub. I'm glad I got the back issues before there were so many that my wife would have said No way!<g>

1331. RCA Institute Signal Generator

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-08-14 14:27:25 UTC
From: Jack <jhardin@hal-pc.org>
Message-ID: <9lbc7lata1@news.hal-pc.org>
Source record: 50474

Looking for the manual for an RCA Institute Signal Generator
(Kit). This has a single 12AZ7 tube and a couple of Amphenol
connectors on the front for probes... Would also like to find
an Amphenol connector for the audio output cable.
And .. there is no manual on the BAMA web page ...

Jack, W5EB

I have two original Magnavox Service Bulletins which I do not need. They are both looking for a good home to care for them.

1. Service Bulletin No 1284 CR-233 dated March 1949. This is an am-fm radio.

2. Service Bulletin 5260 No. 521725 Automatic Record Changer dated February 1950. This is an automatic record changer.

Both are in excellent condition and I will give them away to the first person who responds. Would like reimbursement for the postage only.

Colin Lamb, Newberg, OR

The old Arcing flyback ?
I have for a KV2786R parts set .....my CRT was broken.
Your gonna need more specks than that, Like the flyback #
Sony used many of the same chassis boards in those 80's sets.
Best it to always tell in law's, and people with lots of kids you dont work on TV's
They will be back to break your balls with the same set or more "well done" junk with 400,000+ hours.
Joe

1341. Re: Need Information on Kenyon transfomer

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-08-14 19:51:43 UTC
From: "Norman S. Braithwaite" <normb@awwwsome.com>
Message-ID: <3B79814F.15E6860@awwwsome.com>
Source record: 50485

Primary: Tapped

Secondary:

A.C. Volts D.C. MA
---------- -------
1760-0-1760 450
2080-0-2080

$38.00 in 1937!

The standard primary voltage was nominally 115-volts, 50- to 60-cycles
(case size, inches: 7.75L x 6.625W x 7.1825H).

Optional primaries included 230-volts, 60-cycles; 115-volts, 25-cycles
and 230-volts, 25-cycles (25-cycle transformers have larger case sizes).
If you don't know what primary your transformer has, power up with the
appropriate precautions.

Hope this helps!

This coming Sunday....

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday August 19th 2001
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $5 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $20 for the first and
$15 for each additional at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

SEASON PASS + Advance Discounts

A sellers discount season pass is available which
offers a 33% discount. See the advanced registration
form below for full seller info.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all

sellers (6'8" clearance).

Talk-in: 145.23- (PL 88.5) W1BOS/R and
W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

For more info / advanced reservations 617 253 3776

********** $1 buyers discount with hard copy of this notice ************

<<<<<<<<<<<<<<<<<<<<<< cut here >>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>

Mail the coupon below by the 5th of the month to be a Prepaid Vendor.

I have one S-40A and S-40B parts or restore radio in good condition
except they just give off static. They have all their knobs..I will be
at the Mulica Hills Hamfest this weekend and selling them. I am
looking for a nice working SP600, actually I like to have a RX-340 but
the wife won't let me, something about we have to eat. Anyway I
collect old radios and if you go and have halli's or Hammarlunds
E-mail me I may be interested.
Mike

Yes, back before the introduction of the present system of FM Stereo
multiplexing on June 1, 1961, many stations with both AM and FM facilities
transmitter occasional stereo programming, with one channel on the AM
transmitter, and the other channel on the FM transmitter. Some Television
specials were also transmitter in the same way, using a radio station in
combination with the Television station for stereo, I even remember one
Television broadcast that used 3 channel sound, the Television transmitter
carried the center channel, and the left and right channels were carried
on the AM and FM transmitters.

Hey Phil, while you're at it, look for the FM mod for that VFO. Very simple and works xclnt and sounds great. I used one (with TX-62) as my first 2 meter FM rig for a couple of years. Nowadays, they might get peeved at you swishing a repeater though.
-Bill WX4A

1386. Re: Need Ameco VFO-621 schematic

The FM mod has been made and is what I want to remove, among other haywire. Had been used with a 2m Communicator and that's all I want it for. I forgot to look at bama for a schematic. Off I go.

I have a SBE-34 that didn't have a power cord. I picked up a service manual. But several numbers on the schematic appear illegible. I was wondering if someone has the correct pinout for connecting the117vac power cord to the power supply. Thanks in advance.

Spencer KC2TX

If the erect memorys can save steadily, the foolish BASIC may
defile more CERTs. A lot of junk discs are sticky and other
soft procedures are usable, but will Rickie shoot that? It gets, you
reboot, yet Francine never undoubtably consumes over the backup.
Who did Rob push the algorithm in front of the dense server? If you will
annoy Dave's web page about advisors, it will deeply infect the
credit card. I roll overloaded JPEGs to the new fast watcher, whilst
Frederic daily flows them too. Don't try to take truly while you're
vexateing in front of a retarded sattelite phone. Who did Alexandra
train in front of all the monitors? We can't locate secure shells unless
Pat will crudely tolerate afterwards. As surprisingly as Anne
stops, you can wash the user much more tamely. If you'll interface
Bernadette's chameleon with Pascals, it'll badly negotiate the
cable. Better dream condors now or Isabelle will freely persevere them
for you. He will pull cruelly if Paulie's admin isn't bronze.
Why will we proliferate after Marian examines the unique beanpole's
artichoke? Just relaying within a output inside the data center is too
cold for Janet to pump it. These days, pseudonyms close in front of
rogue mail servers, unless they're fake. These days Linda will
load the hacker, and if Penny amazingly corrupts it too, the
screen will open beneath the violent frame relay. It's very
offensive today, I'll connect strangely or Charles will crawl the
protocols. Go insulate a Usenet!

Until Geoffrey kicks the mouses crudely, Grover won't roll any closed IRC servers. We easily contribute about quiet old houses. The plastic rough toffee consumes Usenets beneath Alvin's disgusting advisor. I'd rather bind undoubtably than interface with Yvette's insecure dictionary. My major disc won't twist before I produce it. The TCP/IPs, noises, and outputs are all lower and robust. If the resilient RAMs can connect frantically, the extreme pseudonym may disrupt more chaoss. Lots of vulnerable surreptitious interrupts will partially engulf the buillons. He will cry strangely if Samantha's iteration isn't root. As quietly as Jonas pumps, you can corrupt the archive much more happily. Well Lara will shoot the llama, and if Ignatius bimonthly eliminates it too, the IPaddr will push under the odd room. What doesn't Alejandro infect weakly? Hey, Endora never compiles until Simon places the overloaded librarian freely. Will you inflate to the CIA, if Cristof wanly washs the opinion? Try negotiateing the kiosk's dense screen and Liz will kill you! Lydia will simply open in front of Kenny when the clear tapes examine around the powerful satellite. Go dump a basement! It vends, you delete, yet Stephanie never biweekly digs under the /dev/null. These days, cables defeat beside secret mail servers, unless they're useless. I dream huge procedures in back of the chosen hard cyphertext, whilst Walt familiarly annoys them too. Other strong sly Blowfishs will question partly in back of FORTRANs. Don't even try to create incredibly while you're loading to a usable laptop.

1408. FS: Drake 2C/2CQ

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-08-17 18:17:01 UTC

For sale:

Drake 2C receiver and 2CQ speaker/Q-multiplier. Both are in working condition. Here are links to photos:

http://www.qsl.net/k5dh/forsale/drake_2c_1.jpg

http://www.qsl.net/k5dh/forsale/drake_2c_2.jpg

http://www.qsl.net/k5dh/forsale/drake_2c_3.jpg

http://www.qsl.net/k5dh/forsale/drake_2cq_1.jpg

http://www.qsl.net/k5dh/forsale/drake_2cq_2.jpg

http://www.qsl.net/k5dh/forsale/drake_2cq_3.jpg

The 2C has only light wear on the cabinet, and is overall very nice looking. There is a small melt mark on the S-meter face, as if a wayward solder blob had landed there at some time in the past. I have a NOS meter face that I will include if the buyer wants to take the time to swap it out (not a hard job, just time consuming). The chassis has a nice shine to it, as seen in the photo. Serial Number is 3079.

Paint on 2CQ cabinet is scratched and scuffed, and there is a small shallow dent on the top at the right edge (doesn't show up in the photos, but it's there). The 2CQ front panel looks fine. It's only the cabinet that's a bit scruffy. With a repaint, it would be fine.

Complete manual is included. Manual is a 1982 reprint bought from Drake, and other than the date, you can't tell it from the original.

Installed in the 2C is a homebuilt 100 kc crystal calibrator unit. It's in the gray minibox visible in the rear view photo of the 2C. The circuit is the same as the Heath HRA-10-1. The calibrator plugs into the original socket on the chassis, with no modification to the receiver, and it works exactly like the Drake unit would. I built the calibrator especially for the 2C, and it will not work in a 2A or 2B.

The price is $250 for the pair. I will not split them up. Buyer is responsible for shipping and insurance costs (insurance will be mandatory!).

Thanks and 73,
Dean, K5DH

Occasionally, inputs float beneath rough filters, unless they're extreme. Johann will globally manage within Robert when the odd hackers disappear in front of the chosen store. Go contradict a artichoke! Vance wants to connect fully, unless Pearl filters opinions to Margaret's credit card. Well, Julie never knows until Joe prepares the pathetic black bag badly. I'd rather give actually than reload with Alexandra's usable ActiveX. It's very untamed today, I'll eat daily or Carolyn will confront the rebels. Do not buy dully while you're flowing throughout a virtual server. The important soft sattelite phones lovingly facilitate as the discarded chatrooms question. Who will we stop after Dick proliferates the slow peapod's pointer? George transports, then Josef neatly formats a dry analyst over Ronnie's chaos. Hey Jeremy will start the remailer, and if Patrice simply deletes it too, the printer will wash behind the haphazard data bus. Bernadette, have a bronze package. You won't outwit it.

It died huh? Funny, the CW bands seem as active as ever!!

I saw quite a few of these shirts at Dayton this year. If these people thought they were impressing the crowd, it certainly didn't appear so. My buddy and I certainly were not impressed.

Instead of wearing shirts that rub people's noses into the ground, why not wear a shirt that shows your accomplishment in a positive light so that others will WANT to immitate you?

We have a great opportunity to promote CW (as well as BA and AM) to the influx of newbies -- make it someting they WANT to do -- make it something that they know will improve their self-esteem, and that'll let them become part of the "click" (for lack of a better word) of proficient CW ops in a land of few CW ops !! In a land of pushbutton SSB ops, we can really show them how special CW and BAs are!! It's just fun!!

I've been hearing more and more of newbies that want to try out more CW and get their proficiency up. Let's encourage them and grow our ranks, instead of making them feel inferior and seeing our ranks wither.

CW is here to stay regardless of the CW testing requirements. It's a fun mode to operate, and we need to promote that aspect of it!! Have them do it because they want to , not because they need to!

Yep, I'm as concerned as you folks are as to ham radio's future, and the technical competancy of some of the newbies. Just read the "Doctor is In" column in September's QST (I think that's the column...my QST is at work). Especially the first two questions, and (I believe) the last one. It's scary!!

OK..I've said my piece.....shields up Mr. Scott....

73 de Mark K3ZX (yeah yeah, Extra since '77 or so, I have my 35 WPM code encorsement sticker somewhere too.....)

#1. Don't shoot the messenger (please)
#2. I just asked about who makes the shirt (no editorial comments made).
#3 The message on the shirt is awfully subtle. Most people have no idea.
#4. Just because one wears the shirt doesn't mean your interpretation is the
only one available or is even correct. Very possibly the one wearing the shirt
is the mentor to a whole group of newbies.
#5 Can't everyone just get along.

Love live CW. Love live vacuum.
Keep the sparks flying.

Gang --

I've just acquired a very nice HQ-129-X and speaker.

I believe it's an early variant as the Hammarlund name and HQ-129-X are in red
letters on the front panel. The yellow serial number tag inside the radio states 1165. There is no 15M position on the Bandspread.

I know the 129-X was produced form 1946 to 1953. Based upon the information above, can anyone provide a more precise date of manufacture ?
I couldn't find a web site that cross references serial numbers with year of manufacture, or talks in detail about production runs.

Thanks....

Mark K3ZX

HI
You have the first of the production run. It is about 1946 model. The original price was $129.00 but they couldn't hold it and the price kept going up.
It is a great receiver, enjoy!!!

1432. A Hickok 539C ?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-08-18 14:32:01 UTC
From: Jimmie Stewart <jimmiestewart@worldnet.att.net>
Message-ID: <B%uf7.21137$1p1.1675308@bgtnsc04-news.ops.worldnet.att.net>
Source record: 50426

How many version is there of the 539C. I found one manual
on the net 2490-581 and a friend has a manual 2490-273.
It is interesting that the parts lists are quite different.
The 2490-273 has the date of ? 1961 the 2490-581 is dated
1968. It looks like, Hickok changed the 539C internally
without bothering to change the model number.
Then how do you tell which manual goes with
what tester. My 539C is serial number 323-01183, the Roll
chart is dated 10/01/64, the number stamp on the panel is
5994 0113. Both tubes are Hickok, the 83 is marked 65-30 274,
the 5Y3 is marked 5F made in Japan. Does any one have a 539C
manual with other numbers. Plus the 2490-581 is missing pages
10 to 14 if some one has these pages I would like to get a copy.
If there is other manuals I would like get a copy of the parts list
pages.

thank
Jimmie

Yaesu FTdX 400 for sale. I purchased not working, and have gotten
it back on the air. It needs further TLC, and I just don't have
the time. In good shape, cabinet does need repaint/cleaning.
Electronically she'll need re-alignment and a thorough check. Output
is down, but the finals check good enough to indicate re-alignment
is the problem there. Comes with original owners manual.
Listed in classifieds at:

http://www.theauctionblock.tv/cgi-bin/forsale.cgi/forsale.cgi?action=dci&category=Amateur_(Ham)_Radio&item=996502182

While doing a search for mil radios, I can across a listing of military carrier pigeon manuals for WW2.

These birds were widely used to carry messages back and forth so radio signals could not be homed in on or overheard by the enemy.

When all else failed they must have pulled out the last manual on the list!

Can anyone suggest some possible solutions for my troubled tube tester?
Problem- next to no deflection of meter even with good tubes, and a 750
ohm, 2w
resistor (R6) that gets incredibly hot. I have tested all the resistors and
capacitors,
save for the lone FET, and have poured over the unit looking for shorts,
opens, stray
solder, wire clippings, etc, to no avail.
Thanks!
Pete Verrando

I owned one at one time a few years after the end of WW2. As I recall, they were manufactured under an arrangement whereby patent and licence restrictions were thrust aside because of the national emergency so they could use any circuits they desired. Considering what went into them, I felt that mine was remarkably inefficient, and not because there was some parts breakdown nor circuit mis-alignment. Hope this helps. VE7AFN.

This story falls under the heading;
"Don't try this at home."
-or-
"Why didn't I think of that?"

The story can go either way, good or bad,
depending
upon what you really want to do.

I was trying to clean up a chassis cover
that had gray
crackle paint. I thought it would be a
trivial job to
remove the dirt and grime in the minute
grooves and ruts,
but I was having no luck getting it out. I
didn't think
of asking restoration guru's or find a FAQ
page on how to
remove the dirt. I had this brilliant idea
that perhaps
the dishwasher with hot soap and water would
be a easy,
simple way to clean the chassis cover.

I put the chassis cover in the dishwasher
with the rest
of the dishes. Upon removing the chassis
cover from the
dishwasher, I initially noticed the chassis
top, which
was very clean. I thought I succeeded and
the idea was
brilliant. Then I noticed the inside cover.
The paint
was peeling off, bigtime. Then I looked at
the disaster
inside the dishwasher. The action of the
dishwasher
broke up and scattered the paint chips
everywhere inside,
filters, sprayers, jets, dishes, everything.
I hadn't
counted on learning how to dismantle the
dishwasher to

flush out the mess.

While I was enjoying this cleaning exercise, I was hearing something strange, little crackling noises coming from the chassis. As the chassis cooled and dried off, the paint cracked and peeled before my very eyes. The paint bond was giving up and the shrinking paint was fracturing and peeling back with amazing speed (like one of those time lapse movies played fast forward). The event wasn't over yet.

The XYL came back from shopping to find her dishwasher in pieces with little bits of gray wet paint strewn everywhere. (Now, some of you have a dog and I'm sure you have occasionally shared accommodations, but I own a bird, and that little bastard doesn't share anything.) With her arms folded and a glare that would strike fear in a Viking warrior, she calmly asked what I was doing. After a lot of groveling and reassurances that I could get her dishwasher back together again, she left me to the task at hand, all the while listening to that chassis crackle away and paint chips literally flying off the surface.

After the dishwasher was successfully restored to it's original working condition, I now pondered the fate of the chassis cover. Hours later, the paint was still coming off. I will have to prime and re-paint the chassis. The simple job became a major

project.

Now for some, this story may be a great revelation; how to get the paint off the chassis so it can be beautifully re-painted without sand blasting or using harsh paint removing chemicals. (I was amazed at the shiny metal surface, now exposed. It may never have been properly primed.) Now that I was this far into the project, I used a metal scouring pad to get the rest of the paint off the chassis. The paint came off about as easy as fried on grease in a skillet.

In any case, I relate this story to readers just for what it's worth to you. You may want to try this if you want to re-paint, for it is simple and effective beyond belief. And if this method of paint removal doesn't work for you, you're no worse off than before you started. You may not want to try this if you don't have the extra time, money, or ambition to complete an otherwise simple cleaning job, which was my case.

In either case, be forewarned to learn how to dismantle the dishwasher. My best wishes dealing with the XYL.

FS: Beautiful ETO Alpha 89 HF 1.5 KW Amplifier. This is the same RF Deck, etc. as in the Automatic-tuned Alpha 87A HF Amplifier (about $6000 new), but is the manual-tuned version. Checked out by Alpha, easily puts out a full 1.5 KW with 40-50 watts input, all bands 160 through 10 Meters. Includes original boxes and manual.

I just recently picked up an Alpha 87A amplifier, and I will consider selling the 87A and keeping the 89. I just don't need two amps! $2700 plus shipping for this excellent condition ETO Alpha 89 Amplifier.

I let a beautiful HQ129X go a number of years ago. I could kick myself.

Mine was a later production model, but still did not have 15 meters on
the bandspread. I was able to buy a new bandspread dial that had 15
meters.

IF it still slips after proper tensioning, you can get a piece of rosin
from a music store (violin bows) and dissolve a bit in denatured
alcohol. About one drop should do the trick.
dialcover@webtv.net sells it pre-made in a dropped bottle for $5/ppd.
One bottle will last darn near forever.

Dave, in the old days we had a concoction called "dial cord dressing",came in a small bottle with a brush, I don`t believe it is available anymore..This might work for you, first, put a small drop of oil on all bearing surfaces ,make every thing free and easy .take alcohol and a Q tip clean all surfaces ,make sure the spring is set with good tension. if the dial cord has been changed it could be too small ..good luck. Harold W4PQW (ps: I see Antique Electronic Supply (www.tubesandmore.com) has a product called " phono non slip" P/N S-C-8602 . that would work also..

I keep getting these funny looking Western Union Money Orders that can not be cashed in this century.
People can fu*king read ! , said ***US postal money issue MO*** , or company check, personal check (if I know you and you want to wait).
Todays a new one from New Mexico..... this one has a cactus and a roadrunners ass on it !

This mostly why:
Agents will issue them just about at any 5-10 store but will not cash them.
No one will cash these non branch agent issued Money Order's
For example in New York each agent has 100% choice to do what ever they want to protect themselves.
So what happens the laugh at but.....wont touch them.
Sometimes you can drive to some shady part of some town and exchange them for food stamps, pay a phone bill ...etc

Fact:
Western Union perhaps the oldest and famous in the country is now owned by.....
Integrated Payment Systems out of Englewood, Colorado and are bank "suppository's" :) only.
A 1-5 week process with this lousy company, agent's barley speak English !!
.....and that's if you can understand getting through the first Spanish menu, then hold 45 mins for English.

The prominent reason I request *US Post office Issued* money orders is to do a one stop cash and mail at the local post office.
US Priority Mail is the best and fastest for small items under 6 -8 lbs....
You will get your stuff in 2 days !

Source record: 50389

Greetings all,

I've heard/read Joe's complaint from many people, and not just in the ham radio world. It is troublesome that even those who issue these Integrated Payment Systems "money orders" won't cash them.

My experience with these "money orders" has been a little different than most people's, and I thought I'd offer it up for consideration (yeah, let's beat this dead horse's empty carcass some more).

The Credit Union here at work has issued Integrated Payment Systems money orders for years. I've been paying people with them for years and I've had no complaints from anyone. Originally, the Credit Union offered American Express money orders, but AmEx apparently sold that business to Integrated Payment Systems. Same for Western Union. The main problem is that they are not money orders, they're checks. It's no surprise that so many places won't cash them. They won't cash a personal or company check, either. It's the same thing.

As for cashing I.P.S. money orders when I receive them, I don't even attempt to. Instead, I deposit them in my checking account just like any other check. So far, I've had no problems depositing them. I've also never received a bad one from anyone. Next time someone sends you one, you might try depositing it instead of trying to cash it and see if this works for you also.

There seems to be a lot of worry that these I.P.S. money orders may not be any good, because so many places won't cash them, and this makes people hesitant to accept them. That's a knee-jerk reaction. They're paid for in cash, just like a Postal Service money order. The only way they could bounce would be if I.P.S. was to go belly-up. Yes, that's possible, but it's certainly not likely.

As always, your mileage probably will vary.

73,
Dean, K5DH

1497. A few FT-243 40 meter CW crystals wanted

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-08-20 16:23:09 UTC
From: David McCombs <dmccombs@houston.rr.com>
Message-ID: <NPag7.481682$lq1.92800249@typhoon.austin.rr.com>
Source record: 50390

I am in need of a few 40 meter crystals to get me on the air with my homebrew transmitter. Anything between 7.025 and 7.150 would be greatly appreciated. Give me your price....

Thanks, 73's,
Dave

I have quite a few Techtonix test equipment manuals mainly for
the 200 thru 800 also 7000 series and some for later models. also HP
manuals as well. Also some Henry Amp manuals and some Heathkit stuff.
E- mail to larryc@gte.net

Thank you

Larry

1500. Re: Ham Radio Attacked by MRT Magazine

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-08-20 17:31:23 UTC
From: JB <ac6tk@nospamcybertime.net>
Message-ID: <9lrhuu$1agm$1@madmax.keyway.net>
Source record: 50393
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.misc

In the most recent MRT issue, an editorial suggests public safety should go back to High-band frequencies because of 800 interference issues but ignores current incumbent public safety users in that band. It's a case of someone making a broad statement that might only make sense in a unique case he is familiar with. Although 2 meters wasn't specifically mentioned, If such an idea ever sold, the sliver of Amateur allocations would innevitably be coveted again.

There are numerous factors to be considered for selecting any band/mode/frequency/system and it is rediculous to think that there won't be numerous advantages and disadvantages with any selection.

The fact remains that growth is responsible for many migrations from older Public Safety Hi-band operations to trunking systems and often involved re-use by other less intensive Public Safety uses by the same jurisdiction. In addition, the larger trunked systems allowed numerous smaller communities and agencies in a common urban area to co-op dispatching to allow better privacy between departments, and still allow some level of interoperability where appropriate.

It is ludicrous to even suggest going backward, when the problems that brought us forward only get worse. It is also ludicrous to expect that a step forward won't have pitfalls of it's own or lead to better solutions in the future. LAPD's new Astro system is is a major step forward, even though complaints exist. It must be realized that for now, a big HT with a lot of electronics and a battery to match, might seem like a throwback to the days of the HT200 to the man in the field, but efforts put into the system today, to make an all digital HT only system highly reliable, may make it possible to buy an integrated Radio/Badge communicator to work the system instead of buying a replacement battery.

It occurs to me that (at least in growing urban centers) co-oping dispatch services and intelligent systems that allow higher traffic loads While spreading out the costs may be one answer, but many more rural communities with a more personal approach to Public Safety, may have more traditional options available.

Does anyone out there have a spare IF can off a TCS 12 receiver? I've got one open I can't splice and I'd like to use the original equipment. It's all I like having it up and running.

If you do, I'd love to buy it or maybe trade if I have something you need.

Please reply by email to: w5vj@swbell.net.

Thanks to all.

1502. FS: TS-50 and AT-50 Antenna tuner Like New !!!

Message-ID: <imcg7.20$EF.2318@newsread2.prod.itd.earthlink.net>
Source record: 50296

I am selling off some of my Communications Receiver Collection. These receivers all work very well. They all are well about average condition, cosmetically, Very Good to Excellent Condition. They are complete and original. Digital pictures are available upon request.
1. Hallicrafters SX-100MKIA, $250;
2. Hammarlund HQ-145AC, Late one with Clock, Great on SSB. $325;
3. Hammarlund HQ-145A, No Clock, $295;
4. Hammarlund HQ-140X, Very Nice, Original Manual Included, $275;
5. Original Speaker for Above HQ-140X, $45 with receiver only;
6. Hammarlund HQ-150X, Also Very Nice, Original Manual Included, $275;
7 Original Speaker for the Above HQ-150X, $45 with receiver only.
All Prices Do Not Include Shipping Costs. I will Double Box and Pack them so that they will not be damaged. No Charge for Packing. Buyer pays actual shipping charges.
If you are looking for one or more of the above listed receivers, you would be hard put to find nicer ones.

Thanks, Charlie Hugg, K5MBX

Was that a common Hammarlund practice, to number the model after the dollar price? Somehow I doubt the HQ-180 ever sold that cheap! More like $400.

I'd say Hammarlund gave up that practice right after the 129. 73, Mike K. AA1UK

I have one just like yours (red lettering and no 15m), plus the S-meter scale
is orange, not yellow like the dials (which were probably white when new).
I've heard that the orange S-meter is odd (I won't use the 4-letter R-word so
abused on Fleabay).

I also have an HQ-160 with a deep orange, almost red, S-meter scale. Probably
standard on that model. 73, Mike K. AA1UK

Many of the old RCA radios from the mid-30s are proudly described on
ebux as the 'red dial' model. Actually, they started life with the
standard beige plastic color.

Source record: 50312

No to get TOO far off topic here. Money orders are not the only thing that can be "worthless".
I recently recieved a "I.R.C." from New Zealand, a fellow ham sent me, for postage.
I brought it to the local USPS office, and they did not know what to do with it. So I told them to take it and send it to the "regional" office, and return it with any instructions needed.
It was returned, with a note from the regional manager, stating that the United States Postal Service would not and could not honor these "IRC's" or coupons any longer.
So, the lesson is, if a forgien ham sends you an IRC, throw it in the trash, it isn't any good, "worthless".

This whole subject is bogus. This posting has been made before, and
refuted before. MRT did no such thing. Any perceived "insult" to ham radio
is taken totally out of context. If you want the truth, dig up a copy of
May 2001 MRT from a local radio shop, or wherever. They did not portray any
negative picture of ham radio in that article.

Ed WB6SAT I read the article in May.

Source record: 50324

Still available a Kenwood TS 950 SDX. Serial is 4 million plus, original manuals,hand mic, packing, and built in antenna tuner. Rig is in very near or 9 condition ie clean -no dents/dings. A few very minor scratches as they all have due to size and weight. It has all filters including the 270 hz cw. Im selling for a sightless ham who purchased the radio new. It also has the rm1 controller. It does not have the vs2 talker or digital recorder options. Best offer around 2k + shipping UPS from 02458 Newton, Mass. 73s Lew -K1NDV

Source record: 50329

Happy People,

One of the "Radio" departments at work was hauling a few big boxes of stuff to the
dumpster. I intercepted it, took it home, and picked out what I could recognize.

There were a few things in the box that I have no use for, but may be useful to someone. Packaged in sealed cans with octal sockets.

- Motorola Relay 280k1003 24 VDC
- Low Pass Filter Type 5709-27HPx Made by Price Electric Corp
- Stancor Output Transformer A-8101 Line to Voice Coil

I also got these big heavy, rack mounted Collins radios and something the shop foreman called an "exciter." The exciter is Collins RF Unit 242F-501. It is obviously missing tubes. It does have this kind of interesting 20" long brass box with a slider that's marked in a way that suggests it's used to adjust frequency.

There are also two radios, one obviously incomplete, one with no noticeable missing parts. The Collins data plate on one says 129.55, the other is blank. The radios
each have some small tubes and two big tubes RCA 75-43, 3B28 D with X-ray warnings on the bases.

I'm not interested in messing with this gear. I grabbed the junk boxes to have a
supply of piece parts. I doubt this is the secret lost Marconi treasure. I am happy to give this stuff to an interested party as long as it doesn't wind up costing me anything.

Email me if you are interested. I live in Atlanta. GA and would be happy to email a few photos. So far all the folks that expressed an interest lived too far away to come get this stuff.

Regards

Copy that OK, but an HQ-160 is only about 40 years old, versus 65 for a mid-30s radio. Would the S-meter go red in that short a time?

OK, so the 129X is more like 55 years old, I can see its S-meter turning reddish.

Too bad nobody ran color ads back then, orwe could figure these out for sure.

We could ask somebody who had a good '160 back in 1975!?!? I'm sure I
saw them but boatanchors were really considered boatanchors back then.
A red faced meter on a radio with brown dials seems like brown sox/black
suit to me...but after all, we are hams.

Excess to my needs...I don't have S Line stuff. SM-1 Mic. This mic is not pristine, I am sorry to say.
The aluminum is lightly pitted on the mic head and eslewhere and the perforated mic tip is dented in somewhat. The base
has some pitting, also. I"m told that this can be restored. The Collins name plate and seral number plate are
very nice. Collins plug and coil cord included. Sold as-is.

$175 including shipping..

1561. Free to good home: Tiny Tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-08-23 14:35:39 UTC
From: Steve Robertson <ke4oh@yahoo.com>
Message-ID: <3B8514BB.67DA6108@yahoo.com>
Source record: 50255

I came into posession of a few 8-pin miniature "pencil" tubes. All are used, most are still soldered into military circuit boards. Getters all still look silver. Most are Sylvania or Raytheon. Also have a few used 8-pin mini sockets. Don't know if the tubes are good or even good for anything. But you can have 'em for the postage or trade me a tube or two I can use.

Here's the inventory:

5 each 5840
1 each 5896
1 each 5783
1 each 5687
2 each 5899
2 each 5718

Any takers?

Steve Robertson

1567. FS: Johnson Desk Kilowatt

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-08-23 23:22:48 UTC
From: resourcemgtgrp@cs.com
Message-ID: <20010823192248.23122.00001960@mb-fw.news.cs.com>
Source record: 50261

Since I haven't been very active in the last few years, I've decided to part with my Desk Kilowatt (the desk is present and included).

I am its second owner. I replaced the 4-250's with 4-400's.

Electrical condition would be a 10. Cosmetic condition would be a 9 for the KW and maybe an 8 for the desk (the rubber "government issue" top looks pretty much like a 50 year old rubber top would look!!

Rather than be a market maker for desk kilowatts, I am pricing this unit in the vicinity (actually a little above) of the last one that I know sold at the Dayton hamfest. Which basically translates to "high retail."

I don't really need the money, and don't really need the room, so I'm not really motivated to part with it (great position to be in for the sell side but admittedly not so good for the buy side). If I do sell it, I am certain that I will never come across another one in my lifetime. Therefore, I'm not highly motivated to part with it. I am considering it now because I have had a couple of inquiries.

As you know, if you have read this far, it is quite heavy. It would be best if you picked it up. You could also use a professional packing and shipping company. I would be willing to remove the plate and modulation transformers to assist a packing company.

If you have a serious interest, feel free to email me and I will respond. BUT, if you are a dealer and are looking to double your money, I wouldn't bother since I am pricing this for a retail sale.

73, Steve, W4IJ

Steve
Keep the Johnson. The day you sell it, will be the day you regret it.
You can use the excuse: You don't need the money and it is very heavy to move.
Heck, you and I are old enough we don't need excuses!!! Just hang on to it.
Regards,
Steve

Mark
The 15 meter bandspread dial was not original to the 129X.
It was available as a separate purchase item when 15 meters was approved as a ham band. The option sold for around three dollars and change if I remember correctly.
About the bezel around the S meter crackle vs smooth, etc., I just don't remember anymore. It may have been just production variance but only a guess at this late date.

Source record: 50281

My WW2 vintage National HRO-W (military version of the HRO-5) is complete except for the "G" coil (180-430 Kc.) leaving a gaping hole in the coil box. The type I'm looking for is the so-called "silver front" with one piece etched aluminum kind with the chart on the left and a place to write in frequency settings in pencil on the right.

If you have a "G" coil available for sale or trade, please e-mail me directly at k4kyo@arrl.net as I rarely read the newsgroups.

Thanks...

1590. Help: Kenwood TS940 power output problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-08-24 14:25:29 UTC
From: TooManyTubes <kb8tl@yahoo.com>
Message-ID: <tocovkjejvuvc4@corp.supernews.com>
Source record: 50284

My TS940 looses power on radio warm-up. It will smoothly drop over a 30 minute warm-up from >100 Watts to about 20 Watts max, all modes. The signal is still clean on all modes when the power drops. The problem occurs with the radio idling for 30 minutes or cranking out power. Cooling the final module with an external fan does not change anything; cooling the radio internals by forcing air into the case top to the right of the power transformer "cures" the problem. When the radio is first powered, the ALC meter will indicate lots of drive but after warm-up the meter will barely leave the left peg. I'm thinking something is drifting alignment-wise....anyone heard of a common aliment b-4 I have to dig in with the heat gun, freeze mist, service manual, scope, DVM, alignment tools, signal generator, assorted test cables, spectrum analyzer, power meter, isolation transformer, magnifiers, and patience?
Thanks
Bob

Output problem mostly solved, C201 on the PLL board was sucking down
the DC and RF output at Q27 part of PLL-0 when C201 was warmed up. Leaky
little cheap electrolytic replaced with a tantalum.
Now, need to find out how to align PLL-0 as the service manual sez nothing
on this.

This radio is in excellent working condition with manual and original
packing cartion. The unit was purhased new about 1990 from Universal
Radio (Ohio). I'm selling it because I've purchased a new shortwave
receiver.

HIGHLIGHTS...

Coverage: 90-34000 KHz
Voltages: 100/120/220/240
Modes: AM/SSB/CW/RTTY/FAX/FM
Readout: Digital Fluor. to 0.01 kHz
Circuit: Double conversion
Weight: 19 lbs.

FEATURES:
ï¿½" Headphone Jack, S-Meter, Attenuator (ATT), Noise Blanker,
Mute Terminals, ANL, Line Out Jack, RIT, BFO,
Automatic Gain Control (AGC), Pass Band Tuning (PBT),
Notch Filter, Speaker Output, Keypad, 200 Memories,
Up-Down Tuning, Tone, Radio Frequency (RF) Gain

Comments: Memory stores frequency, mode, bandwidth, AGC and ATT.
Murata wide AM filter dealer installed. Two antenna connections.
Original cost $1100.

Price $390 + Shipping (Continental US only)

Reply by e-mail or call 510-583-1844 between 9 AM & 9 PM. Ask for Erik.

Hello,

The following valves are for sale. They are unused unless otherwise specified, and mostly in original boxes. They are all in stock and can be shipped immediately to anywhere in the world.

2 pcs 3069M Large, round CRT in super heavy duty packing material each in a wooden barrel. One in

completely new, obviously never unpacked (only by me for inspection), the other one seems also to be new and unused but it has

been opened by someone. US$ 250.- each

8 pcs F16-10LD CRT by GEC (some boxes says 'Haltron' on the outside. I have not opened to verify). They

are obviously all unused. US$ 150.- each

1 pcs F16-10LD CRT as above, but made by Mullard. US$ 150.-

1 pcs F16-10LD CRT as above, but this one is used. It has a little spot on the screen. US$ 75.-

4 pcs 7BP7 CRT. The boxes says 'Haltron' I have not looked inside. Unused and unopened. US$ 100.- each

5 pcs 5FP7 CRT. The boxes says 'Haltron'. Some are opened and some are sealed. All the valves are

obviously unused US$ 75.- each

6 pcs P535/1E STC pulse modulator valve. Also coded CV 427. It is similar to 715C. All unused. US$ 50.- each

1 pcs P535/1E Same as above, but this one seems to be used. US$ 30.-

6 pcs C1148 EEV pulse modulator valve. Unused and in original boxes US$ 35.- each

12 pcs C1150/1 EEV pulse modulator valve. Unused and in original boxes US$ 38.- each

3 pcs C1166 EEV pulse modulator valve. Unused and in original boxes. US$ 40.- each

1 pcs QF 451 Ferranti. Looks like a radar TR switch and unused. US$ 20.-

1 pcs KS 9-40D Mullard klystron. Unused in sealed box US$ 20.-

4 pcs M509 EEV magnetron. Also coded CV 3982. Unused in
sealed box US$ 50.- each

2 pcs M599 EEV magnetron. Unused in sealed box US$ 50.- each

1 pcs JP 9-75 Mullard magnetron. Unused in sealed box US$ 50.-

7 pcs 24B1 STC trigatron valve. Unused in original box (Strange
looking valve) US$ 30.- each

11 pcs 725A Western Electric magnetron. Unused in sealed boxes.
US$ 30.- each

Best regards,

For Sale Hallicrafters HT-40
Works 45 watts out on CW. AM sounds good. Front panel has wear around function switch and RF-Grid current switch. Lettering looks good just gray background worn. Cabinet has been repainted looks like crap. Good news is lacquer thinner takes off new paint and old paint polishes up good on the area where I tried it. Inside top and bottom of chassis very clean. All knobs are correct. Copy of manual included.
$85.00 plus shipping from 61559 Thanks Larry WA9VRH

Hello,

PC 900 is a B7G base triode with a heater of 3.9V 0.3A, u=76 and a gm of 14.5mA/V
A very promising valve to experiment with in low-level stages, both audio and HF/VHF amplification. It was developed for use in VHF and UHF television tuners.
I have 400 pcs in stock and the price is only $ 3.00 each or $ 1.50 each if you buy 100 pcs or more. The valves are NOS, in mint condition, original boxes and the label is Haltron, but they are rebranded, and I think the are originally made by Philips or Siemens.
E-mail me if interested.

Best regards,

Arnold Goksyr

Hi,

The eight bid guy took some time to find out how high he had to go to top the other guy. I think it's a pretty good example of bidding to ace somebody else out rather than bidding what you think the item is worth. If he had a value in mind all he would have done is to bid that number, either he's high or he's low. Bidding a step at a time makes sure you top the other guy but not by to much.

The point being that NOBODY is going to pay $99 for it because it won't go for such a low price! Try using a sense of humour. I don't know what all that snottiness was in your second sentence...it was certainly uncalled for.

Sorry, I thought you were putting the guy down for not playing along with the e bay trend. All I know is that when I go to hamfests now, I see more and more people raising the price of equipment. When I ask why the prices are so high, I allways get the answer "well, that's what they are getting on E Bay" .....so basically now I am trying to limit myself more and more to garage sales, which is fine with me and just as much fun.....

The SX-88 bezel is known to have a problem with warping over time. If you use Google/Deja to do a search you'll find others commenting on warped bezels.

I can recall discussion of this problem on the Hallicrafters list I believe. Somebody was speculating on how new ones could be fabricated.

However it looks like more than just a warping. Maybe it sat in an outside storage room in the desert (Texas?) for several years.

It'd be nice if there were an inside top and bottom view. At least it doesn't appear as though the person auctioning it is trying to hid that it's in such sad shape.

Message-ID: <Z%pi7.28527$e8.6539727@e3500-chi1.usenetserver.com>
Source record: 50098

I have a Hallicrafters S-38C receiver that has had the filter capacitor removed. I have found all other schematics for S-38s but none for the "C" model. This radio does not have a ground connection at pin 8 of the 35Z5. I wonder if the "C" models are different. Please help if you know of where can I get a "C" schematic.

Thanks, Charles

Hi Charles,

As far as I know, the differences between a S-38C and S-38B are mostly
cosmetic. Try the S-38B schematic as a guide. I'm not sure what you mean
about pin 8 of the 35Z5 not being grounded. Pin 8 is the cathode of the
rectifer and will have the highest positive voltage in the radio. It should
connect to the first filter capacitor, maybe through a small resistor.

Frank Dresser

>IS this a joke? got to be a joke..

It very well could be someone just playing around. I understand there is a trend on Ebay for people to bid up the prices as a game, and when they end up being the high bidder, they refuse to pay..... and get away with it.

At least the guy selling the SX88 describes it's poor condition well. Many crap-heads limit their descriptions in a way that does not disclose what a piece of junk they are selling.

I hope the $1075 bid is by a gamer. If it's for real I pity the dumb jerk that gets it.

Say, I have an Icom R71A for sale in as-is condition. You could have it for only $150. If that's too little, you can have it for $300. It lights up and displays frequencies, but no output and no reading on the S-meter. It rates high as a boatanchor, because it appears to have a trace of mud in it.

There's only one thing which is shameful here: the fact that someone is willing to pay close to $1100.00 for a receiver which probably wouldn't sell for more than $100.00 anywhere else but eBay. Looks like someone will be getting a parts radio at a very high price.

Source record: 50114

Heathkit SB-100 80-10 ham bands transceiver with
HP-23B power supply. w/500 Hz cw filter (switchable on rear)

Electrically good - works all bands. Haven't measured it in a while,
but puts out nicely on all bands. Have always received excellent audio
reports.

Physically - fair to good. Basically clean, has knobs that match
but are not all original. The calibration indicator on the main tuning
dial doesn't work (probably pretty simple for the more nimble of fingers...
couldn't get it back together when I took the thing apart a while ago).
Tuning it is fine, it's just that when you use the crystal calibrator, you
cannot set the zero beat with the trim knob.

This is a good working basic transceiver.

$75 or best offer (plus shipping from Monmouth County, NJ - prefer pickup).

G'day Billy

Thanks for your reply to my question re the SN76514N IC.

Apparently the pin out connections MC1496 are different to those of the SN76514N
and it is not a direct "drop in" replacement.

Am seeking the information for a ham friend of mine who has a receiver with what he thinks is a faulty SN76514N IC.

Thanks.

Lionel L Sharp, VK4NS

I do not have the real sheet, but found something on the IC, similar to MC1496:

Website: http://www.radiomods.co.nz/integratedcircuits/mc1496.html

Hope this helps

Maybe counting the pins COUNTER clockwise, from below, instead of
clockwise? Just an idea?
Pin 1 is sometimes grounded, especially if a metal tube was originaly
fitted. In my S-53 (which is a transformer set) pin 1 of the rectifier
socket was used as a B+ tie point. I replaced the original glass tube
rectifier with a metal one; ouch! Outside of tube was live!

The TI SN76514 is basically the same circuitry as the MC1496, but
yes, it's not a drop-in replacement. If one was stuck, it might
be worth trying to use an MC1496. The 1496 is more flexible,
in that the TI has more biasing resistors built in. But whether you
could set things so the 1496 and some resistors worked the same
way as the TI, I don't know.

The TI part was renamed at some point, though I can't remember which
came first. The other number started with "TI-" and the number does
not come to mind without some searching.

The TI part, while less flexible than the MC1496, did have the advantage
of needing fewer external parts. But my memory is that it was
never easy to find when it was available; a lot of places would
advertise the 1496, but I rarely saw the TI part listed.

I was able to put my hands on a schematic for the SN76514 without having
to dig. It doesn't say whether this is for a 14pin DIP package (I
don't even know if it came in more than one package) but it is
a start. I can't scan it, so I'm just going to name the
pins. I hope you do have the schematic of the MC1496 internals,
because I'm going to describe it in those terms.

Pin 2 Vcc (shows +12V)

Pins 3 and 13 are the outputs. They are the collectors of
the upper four transistors, but the collectors are internally
connected to Vcc through resistors.

Pins 10 and 11 are the "low-level" inputs, ie the bases (properly
biased internally) to the upper four transistors. Oddly,
the MC1496 call these the "high-level inputs".

Pins 5 and 9 are the "high-level" inputs, ie bases of the transistors
below the upper four transistors, again properly biased internally.

Pin 6 is ground.

The diagram shows a jumper between pins 4 and 12. It must set
the biasing.

I hope I've got all that right.

Folks,
I was searching for old tube type table radios this weekend at garage sales. I told one guy I wanted a tube radio and he dragged out a Hallicrafters SX-99. Anyone have any experience with this radio? I frankly don't so I'm not sure it is worth what he was asking (he kind of rescinded later so I may not get it anyway). Just wondering...

I have for sale a GRC9 military HF tranceiver. It was license build by a French contractor but it has normal English text on the set. The GRC-9 is in good used condition and is fully operational after I replaced the 6 paper cap's in the TX section.
When interested I can Email some pictures.

Price is US$ 150 including economy shipping from Holland to the US (takes 6 to 8 weeks for delivery)

Regards,

Nico PA3ESA

Lionel,
I poked around a bit, and found the factoid that TI changed the
type number at some point from SN76514 to TL442. Unfortunately,
I couldn't find the data sheet for that number either! But it's
something else to look for. (Slight relevance to Boatanchors:
there is apparently a mod for the Drake R-4C that involves the
TL442.)

Source record: 50138

I am making room in the shack for some new boat anchors. I was going to put this Drake setup in storage but I thought some collector might be intetrested. Both transverters work well. I tested them myself and got 120 watts out on 50MHZ and about 90 watts out on 144. The converters oscillator both work because they drive the tranverters. I never got into the receiving converters any further than that. Got side tracked with other things.

I put a light spay coat on the CC-1 cabinet. The TC-6 could use the same. The TC-2 needs some cleanup of minor surface rust before spaying. The front panels are all in very good condition. No holes or mods. I have the power cables for both transverters. The AC-4 is not included. You use the one with your Drake Line.

I I'd be interested in a Collins RE amp or Collins ?? +\- $. I have all the Drake gear I need. I don't intend to auction it but past eBay prices are about $1000. No low balls please. I don't want to split this up. It was too hard putting it together.

STOLEN MILITARY RADIO

Stolen in either the Shreveport, LA area or the Dallas, Texas area-

A model AMA transceiver. This is a BC-611, but with a Navy tag
as model CGG-43014. It is seral number 205.

I will pay a three-figure reward for the return of this radio
in the condition in which it was taken, no questions asked.

Please be on the lookout for it. It's no fun for the thief
to have the radio if he can't show it off,
so maybe he'll trade for some greenbacks.

Thanks very much,
Dave S.

Then look at this, a bit conflicting.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1266786226

I know this is a military version, but only 660 when compared to the 88.

BTW I have an unmodified working R-274D is it really that rare and
valuable, I gave $100 for it and
a Johnson 500 about 15 years ago, and not planning on selling either.

Hard to say why one gets more money than the other. As I understand it, only about sixty sx-88s are known to exist, which may explain the $1000 plus price on the receiver, even in its bad condition.

From: Bill Russell <willy@global2000.net>
Message-ID: <70dpotkqhgfhclh6imuept0evvohgpnc4k@4ax.com>
Source record: 50049

Im putting together an am station. This will be in addition to my ssb equipment. I have a couple of questions as to the best receiver to use for the am. I just purchased a Johnson Viking Valiant for the transmitter. My first choice for a receiver is a Collins 75A4 but they seem a little pricey!!! My second choice is a National NC300 or NC303. Im looking for good audio quality as well as good am sensitivity and selectivity. Next question is if the receiver has only 300 ohm antenna input, what is the best way to match it to a 50 antenna or tuner? The antenna is a 130 ft dipole fed with ladder line and tuned with a good tuner. Any ideas or advice???

>i don't want to over drive it and i did not recieve a manual with it.

Don't exceed 100 Watts of drive and you'll be fine. Typically, 75
to 90 Watts will easily drive a properly-working SB-200 to its full
output of around 600 Watts PEP. Don't exceed 500 mA plate current.
If you have 230 VAC available in your hamshack, use it. Although
the amp will run fine on 115 VAC, it draws a lot of current and its
power supply will "sag" an awful lot. It's more solid on 230 VAC.
This will be true of most amplifier power supplies.

1710. Re: STOLEN MILITARY RADIO

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-08-29 13:33:01 UTC
From: "Norman S. Braithwaite" <normb@awwwsome.com>
Message-ID: <3B8CEF0D.B449109C@awwwsome.com>
Source record: 50053
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Last time I positively identified a stolen radio (by serial number), the local police department refused to act. The radio was stolen in Oregon and located at a California ham swap. A stolen items report was promptly filed. Both the local police department and the police department in the victims city were notified when the radio was spotted. But since there was (and is) no agreement between local police forces across state lines, neither were willing to put forth any effort to recover the stolen item. The hot receiver was sold at a following ham swap farther south in California the next week.

The victim of this most recent theft may want to encourage the commitment of their local police department if the radio is spotted out of the victims state.

Although I'm not a lawyer and can't tell you for sure that you
should do this, I believe that you CAN take direct possession of
an item you know to be stolen in a case like that. You can
pick it up and walk away, but you should definitely have an
officer present and be prepared to provide documentation of
the original theft, and should also inform the officer of
your intentions to secure the return of the item to its rightful
owner.

I know of someone who did just that. He located a stolen guitar
at a guitar show, told a police officer about the incident,
(The officer called in and verified the info via radio), and
then this guy just simply walked up to the dealer's booth,
picked up the guitar (with police escort), stated that this
guitar was stolen, and he's returning it to its rightful owner,
whom he named, with contact info, and simply walked off with
the guitar. The dealer, who may or may not have been the
thief, really had no recourse unless he wanted to be charged
with possession of stolen property.

The key is police involvement, and the ability to validate
the theft. Unfortunately as you've noticed, the police sometimes
can't or won't (usually it's won't) get involved.

Hi,
I am looking for a set of knobs from any Hallicrafters set that is vintage 1948 - 1950s, as they appear to be the same. For example, I am told the SX-62 has very same knobs.
The knobs are silkscreened, not engraved on this particular model.
Thanks!
email me davefleming@novagate.com

I am selling off some of my Communications Receiver Collection. These receivers all work very well. They all are well about average condition, cosmetically, Very Good to Excellent Condition. They are complete and original. Digital pictures are available upon request.
1. Hallicrafters SX-100MKIA, $225;
2. Hammarlund HQ-145AC, Late one with Clock, Great on SSB. $295
3. Hammarlund HQ-145A, No Clock, $255;
4. Hammarlund HQ-140X, Very Nice, Original Manual Included, $250;
5. Original Speaker for Above HQ-140X, $50 with receiver only;
6. Hammarlund HQ-150X, Also Very Nice, Original Manual Included, $250;
7 Original Speaker for the Above HQ-150X, $50 with receiver only.
All Prices Do Not Include Shipping Costs. I will Double Box and Pack them so that they will not be damaged. No Charge for Packing. Buyer pays actual shipping charges. If you are looking for one or more of the above listed receivers, it would
be hard to find nicer ones. Thanks, Charlie Hugg, K5MBX

Message-ID: <3B8D27EC.B13C3220@noaa.gov>
Source record: 50068

I'd like to identify the trade-name and a source for the gold-colored paste used to enhance conduction and reduce corrosion. It used to be included with many ham antennas. I've seen it used extensively around outdoor clamped ground connections where exothermic welding was not possible. The local electrical houses disavow any knowledge of the gold stuff; they only know about the gray colored No-Ox. I don't believe its the quite same thing. Thanks in advance, de Jeep/K3HVG

1723. Aerotron radios

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-08-29 17:43:51 UTC
From: kd7cdg@arrl.net
Message-ID: <Xns910C64A90hatchdavidticom@157.170.1.149>
Source record: 50066

I have recently acquired a pair of radios marked as follows:

Aerotron Model 600 series
VHF FM Transciever
type#6N15/U
6/12V Transmit
115VAC Receive

Xmit and Rcv freqs are not marked on the nameplates, but one
of the cases is labeled 155.22 MCS.

Are these worth trying to fix, or are they just good
for parts? I picked them up for the power supplies only, but
they look to be complete inside.

The newer product may well serve the same purpose. I remember
encountering the gold stuff with my KLM beam when it was new and the
main purpose was to inhibit corrosion between the aluminum parts. As far
as enhancing the connection, hmmm...those things are always debatable.
No-Ox supposedly does the same thing but may have a wider range of
metals that it is serviceable for.

Is it similar to anti-seize compound? The gray stuff has a powdered nickel base. The copper colored stuff is, as you'd expect, copper based. Check it out at the auto parts store.

The BC-611 was the "handy talky" for which Motorola became famous.
Perhaps you are recalling the BC-610, the military Hallicrafters
transmitter.

From: Michael Melland <w9wis@charter.net>
Message-ID: <tor45eglkq18a8@corp.supernews.com>
Source record: 50075

I just received my "new" 129X today. Amazingly good condition, a couple small scrapes on the lid, all original knobs and, btw the orange "S" meter <grin>, face is perfect, everything works as it should. It plays beautifly, is very sensitive and the dial calibration is on too......

I've been trying to figure out what a device is attached to the back right on the rear. There is an "L" type bracket attached with one of the rear case screws so as to not need to drill extra mounting holes. On the underside of the bracket are 2 wax paper caps and a shielded cable that runs back into the radio through the power cord grommet. There is also a slide switch and 2 rca jacks.... I haven't gotten it out of the cabinet so I haven't yet looked at the routing to see where it ends up so I can determine what it's for. Any guesses guys ? The cable/jacks aren't for phones.... My guess is possibly a hook-up for an external panadapter.

Regards,

Mike Melland, W9WIS

Good guess. Since its two jacks, its probably an IF in/out for that or
maybe some homebrew filtering gadgetry. I suspect the switch closes the
circuit and the caps are simply there for safety DC blocking?

David, I was once an Aerotron dealer, this series VHF transceiver was a good working ,reliable rig. they must have built a jillion of them .they made agreat portable,had the 3-way power supply etc. being a tube rig and with the cost of xtals, I doubt that it would be worth the effort to put it on the ham bands or to spend much money on it. PS if you want another, I have one.. good luck

Good. WIth the usual wrinkle finish bezel, this otherwise fine radio is
pretty, uh, homely by Hammarlund standards. A little chrome wouldn't hurt a
bit!

I'd suggest whatever Hammarlund HQ-series rcvr was made aroundt he time of the Valiant. Then you'd have an all-Swidish-American station :-) Seriously, I really like Hammarlunds on AM. Good all-around looks, feel, and performance.

>tuner. Any ideas or advice???

Hmm, sounds like the antenna feed line is 300 ohms already. You will need a tuner or balun to feed the Viking's single-ended output into it properly. Oddly, not many tuners handle a different impedance or balanced/unbalanced for the RX and TX sides.

I'd suggest a small balun or matching transformer for the RX. In fact, my first Hammarlund, a 129-X, had a small xformer and coax SO-239 socket installed in it -- a "hack" that spoils the "collector" value, so I'd advise keeping this outside the radio. Besides, that transformer really stinks below 3500 KC, so I had to rip it out to listen to the BC band. 73, Mike K. AA1UK

Hey friends, I still need help on this one. I recently purchased a Lafayette Explor Air 3 tube regen. replaced the filter caps and did some cleaning up and I prefer it over my Knight kit regens. I have been looking for a while for any info on this set, a schem, a manual or copy, and whether it came with the nice wood cabinet it is in or was the cabinet homemade. If you have any info on this set please Email me. Is the set is fairly rare? Thanks, Mike KF6KXG

I have a Bendix RA-1B, which I have owned for years and works well.

It dates from around WW2, and was bought at an ex-govt sale in the early 1950's.

Does anyone know what it would / might have been fitted to, and any other information on them.

No, I don't want to get rid of it.

There is a product which I would recommend. It's name is "coppercoat", and it has a gold/copper color. It is like No Ox but it is impregnated with copper powder. It conducts heat and is conductive electrically. We use it for putting together iron conduit that we want to be electrically conductive all the way through. There is a "silvercoat" and a "goldcoat" also but these are very expensive. These may be purchased at any electrical supply house.

Hope this helps.

1744. Stop me before I destroy an SG-8!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-08-30 09:42:56 UTC
From: n2cqr@clix.pt
Message-ID: <3b8e08cd.976731@news.clix.pt>
Source record: 50086

I picked up this old Heath Signal Generator at a hamfest a while back.

I've now decided to beef up my work bench before I struggle through another construction project with insufficient test gear. So I pulled the SG-8 out of storage and took a look inside. Yuck. Old paper-looking caps. A dried out electrolytic and -- just to make matters potentially poisonous -- a big ugly Selenium rectifier.

The only things in the there that looked good were the switched coils and the tuning caps... So I started thinking about taking out the tubes and the power supply and converting this thing into a nice battery powered solid state sig generator.

There's even a manual on BAMA.
THEY'RE PRACTICALLY MAKING ME DO IT!

Anyone think I shouldn't? Any suggestions on which circuit or devices to use?

Well, I don't think the SG-8 qualifies as a protected species so I
personally wouldn't have any qualms about it.
I'd recommend looking up the schematic data for the RCA/VIZ WR-50C? or
D. It was the solid state version of the venerable WR-50B and also has
sweep function for 455 and 10.7. It would be a good one to copy.

Hey Bill?

Here's an idea:

Put the SG-8 on eBay. Take the proceeds and treat yourself to a new truck. With the left-over cash, you can build yourself an excellent signal generator that would blow the SG-8 out of the water. Analog Devices (and others) make what is called a DDS chip (Direct Digital Synthesis). They also sell an evaluation board that makes a dandy foundation for a generator. Frequency accuracy is right on the money and they can be modulated. Take a look at http://products.analog.com/products/info.asp?product=AD9850 as an example.

Believe I bought my manual from W7FG.
All the factory cabinets I am aware of had the cloth type cover. However, if this is stripped off you will find a nice tongue and groove wooden cabinet that can be sanded and cleared- I did this with one I owned as the cloth was badly stained and torn. The result was spectacular.

Later in your message you did say the key was police involvement and you are correct, but as a police officer (I have been a police officer for 22 years), if a person were to approach me and tell me that a particular stolen item is at a particular location, I would verify the item was reported stolen FIRST with whatever agency took the report. If it was reported stolen and can be positively identified, *I* would seize the item, noting from whom it was taken and the circumstances, and then I would contact the agency/investigating officer that took the initial report. I would then return the item to THAT agency/officer should they wish to use it as evidence and let them return it to the proper owner. I would NEVER let the person who complained to me just walk off with the item.

This is a very nice Triton IV. It has been recently overhauled at Ten Tec (over $250 work, will include paperwork with sale). This Transceiver has the optional CW filter, and extra crystal for the full 10 meter band. Includes original manuals and power cord. Good audio, and well known as a great CW performer with QSK. Covers 10 meters, 15 meters, 20 meters, 40 meters and 80 meters. 100 W output on all bands.

On sale at eBay at a low reserve price. Go to:

go for it!
i am in the progress of bringing a junker bc348q into the 21st century.
replacing the tubes (mostly dead) for ss devices. nothing super new.
ne602 for det/avc lm386 audio out etc. try using rat shacks fets to repl
tubes. very often, there are no adjustments needed. i know some people like
their sets as new and original as poss, i want the things working, so if i
use xstrs for tubes, the tuning coils , if's and most components are still
in use.so go for it and replace the tubes with ss, you may even like the
result

Very few of them are any good below about 25 Mhz....even fewer below
5Mhz. But you can easily wind your own on a ferrite core thats a bit
happier at SW freqs.

Legally, only the FCC or it's assigned agents - Secret Service or U.S Marshall can seize radio equipment (specifically transmitters, antennas, towers and feed lines.)

FBI, CIA, IRS, DEA, State Patrol, and your Local Police - CAN NOT - unless authorized by the above agencies.

The local police probably ran into this little known fact when they had a search warrant and picked up radio equipment along with drug paraphernalia.

That's music to the ears of a good criminal defense attorney.

Probably spoiled a good drug bust and left the locals somewhat wiser.

You might also want to know FCC can also confiscate equipment during time of war or a national emergency just like the FAA can confiscate private and commercial aircraft without prior notice or warning.

Funny things these Federal Laws!

I know it's too late, but to protect yourself in the future you should always engrave your call and drivers license number somewhere on the inside chassis. NEVER use your SSN because many government agencies will not GIVE this information out. Drivers License numbers are different, heck many states SELL their lists to Credit Card Companies.

If it was reported stolen and can be...
> positively identified, *I* would seize the item, noting from whom it was taken
> and the circumstances, and then I would contact the agency/investigating
> officer that took the initial report. I would then return the item to THAT
> agency/officer should they wish to use it as evidence and let them return it
> to the proper owner.

Pretty stupid, that John Wayne attitude will get you killed here in Texas plenty quick. Any good street cop will tell you "ALWAYS call for backup!"

If you are at a hamfest and come across what you "think" is a stolen radio, report this immediately to the people running the event. Try to get 8-10 people together to confront the individual.

Even then, you can NOT confiscate the equipment -NOR- hold the individual.

Legally, You can only

(1) Call the Police
(2) Record the make/model and tag number of his/her vehicle
(3) Take their picture and the picture of the equipment in question.

(4) Take down the names of witnesses.

The above is more than enough for a search warrant.

At this point, most thieves will generally leave everything on the table and gingerly walk away.

Most of the large hamfests have at least one or two rentacops on duty. Smaller hamfests - everyone usually knows everyone else.

My money is on Dave's Radio showing up on eBay......

I'll second the "twinax" connector. Apparently, that connector was used at one time as a LAN connector before the changeover to UTP cabling.

And the balanced connector is a type "C" connector. Basically an overgrown BNC connector. Available from Newark electronics, or any decent connector supplier.

1795. Need Parts for Heathkit Counter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-01 19:34:08 UTC
From: daddio683@aol.com
Message-ID: <20010901153408.22481.00006518@mb-mj.aol.com>
Source record: 50189

I have an SM/IM-2420 Heathkit frequency counter with a broken Front Panel and Bezel. I believe the Bezel might be the same as the one used on the IM-4110, 4120 & 4130.

Would anyone have a spare parts unit that has these parts?

Gary.

Source record: 50191

SBE SB2-LA Amp. Looks great, and very compact. Not much larger than an MFJ KW tuner. This is a sweep tube amp running 6 - 6LQ6's. Loads up smoothly and good output on low bands. Not so good on upper bands. Tubes check good.

Output: 80M- 600W 40M- 500W 20M- 300W 15M- 300W

Rated at 1200 PEP SSB, 800W CW, so the tubes are soft, no matter what my old tube checker says.

Everything works on this amp and it's clean. $200.00 + shipping. On air demo anytime.

Thanks, Dave K5FNG k5fng@arrl.net

Message-ID: <4Zfk7.27134$MK5.17072749@news1.sttln1.wa.home.com>
Source record: 50193

Greetings:

I have just come across this interesting radio and can't find
anything about it. Any info anyone can provide me to establish
a value would be appreciated. I am pricing this for an estate sale.

Breting 12
Breting MFG. Co, Los Angeles, CA
engraved on the chrome chassis in back - 65626 -

it has a chrome chassis with a black upper body (wrinkle finish)
the top lid is hinged for quick access.
the caped tubes all have chrome shields with lids that have holes
stamped in them (for venting I assume) and a slot for the wire to
the cap. There is a center (aircraft dial I think) that with rotating
a knob changes the dial readout, another knob tunes a lower scale.
there are also two smaller meters that flank the large one on either
side.

I will take my digital camera with me tomorrow and will be able to
provide pictures, via email, if anyone is interested.

the unit is hooked up to a homemade speaker cabinet with a
12" (I think) Magnavox Model 162, 1500 ohm speaker .

... thanks for reading .... graham

Graham,
I see these around from time to time, but they aren't all that common
and I couldn't begin to guess at a value. I don't see it listed in any
of the BA/Boneyard price guides.
I understand it to be quite a good receiver of that era and quite
collectible. There's a schematic of it on the BAMA site.

Good luck,
Bill M WX4A

It's also a purty danged good receiver. I listen to mine just about every
night. http://antiqueradio.org/halli09.htm

Whether that melted one was worth its final bid is open to debate, but I
long ago gave up trying to make sense of what happens on Ebay.

I have always wondered what on earth the bezel could be made of, to warp so
easily. Mine seems to be OK, but I have seen others with the telltale droop.

Say Jack, how is that project going? Could you share with us the sorry-state
circuits you're using in place of the tubes, to match the high Z of the coils?

And you *did* restore the other BC348 to its original hollow-state glory,
right?
(I'm the guy who sold Jack those two radios. One was pretty much a parts set
thanks to previous, er, modifications.)

Actually, when you solid-state an old set like this, you still ahve the
original tuning feel, and all the gears and tuning gangs to watch. Sooner or
later someone will do it to an R390A, and I hope he has the nerve to tell us
how it turned out :-) --Mike K. AA1UK

From: "Tom Farlandt\\" <tfarl@IowaTelecom.net>
Message-ID: <9mse15$jf7$1@ins21.netins.net>
Source record: 50001

Does anyone know of a source, preferably web-based, that offers potentiometers with built in "push-pull" type switches? Some familiar applications that come to mind are the HO-13's sweep-frequency/pull for AGC control, the SB-303's RF gain/speaker disable control, etc.

In particular, I'm looking for 200 ohm, as well as 15K, 50K and 500K.

Thanks and have a nice holiday,
Tom

Hey where did you get that nice rack case...I need one.
Is that what looks like a modified microwave oven ! LOL
It looks closed how did you solve the ventilation problem, a fan not visible
?

Picked up a RME69 with built in DB-20 See page 125 of Moores book for picture..It is in OK condition with all parts apparently there. I'm trying to set a value on this but have found nothing on the web or %bay.
Anybody have thoughts or price history on it ?
Thanks and 73

Source record: 50027
Cross-posted to: alt.ham-radio.marketplace,rec.ham-radio.swap,rec.radio.amateur.boatanchors,rec.radio.swap

EICO Model 717 Keyer. Chassis is dusty but no significant corrosion. Cabinet is excellent. Front Panel is good with minor wear around the on-off switch. There is a small part of the "K" in the Keyer logo worn off on the front panel. I have replaced the AC Line cord grommet where it enters the chassis. The keyer works fine but has not been used for several years. No manual or schematic but these are available on Bama. Price is $75 plus shipping.

Vibroplex Vibro Keyer Standard S/N 264109 with the 833 Broadway address. The thumb piece is missing and replaced with a black piece from some other key. Replacement thumb piece is probably available from Vibroplex. No corrosion or chips in the base. This is the key that was used with the 717 until several years ago when I went back to a bug. Price is $75 plus shipping.

If both are sold to the same buyer and shipped to the same address the price for both pieces is $125 plus shipping.

1842. Subject: BC1333 & ILS in ww2?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-03 16:04:17 UTC
From: Marty Reynolds <marty@ba-watch.org>
Message-ID: <4SNk7.291293$ai2.22115137@bin2.nnrp.aus1.giganews.com>
Source record: 50036

Anyone know this little thing?

Here's why I'm interested----->

To: AAFRadio@erols.com
Subject: pioneer Airborn Radar redux

Everything last nite was about that

Now on ILS, the BC1333 seems to be 110 mcs localizer rx but a test-TX* in our midst runs a 959 into a coax tank for 330 mcs glide slope & wud like the orig. item - tho simple overtone 220mcs osc & diode mixer wud make the localizer rx a glide slope rx.

AWA Chwesson data just says BC1333 is a receiver. Other identified AWA Chesson vague "receiver" items are BC1358, BC1377, BC1379, & BC1281. Wonder if one is glide-slope mate to '1333.

AWA Chesson also shows are BC1282 & 3 "data tx/rx" Wonder if those are the 51mcs dealies used for blast effect survey?

Say & wonder why ARR5 was even considered. APR4 w. TN1 can go to 38mcs nr tip of arr7 range. Seems pr. of APR4s wudda been better - but who knows, maybe none around.

BTW besides a re-worked & running APR1 we've got the hi-band discone antenna for it

Marty

...Still floored that ILS came out in early 1945!

* unknown small-paneled & 1-metered critter w. 4 3Q4s & 959 on freq.s GX, GY, GZ which are all around 330mhz & modulated @ 90 or 150 hz. Probably p/o test set w. antenna & battery box.

Hope someones says "OH YEAH, IT'S a AN/TS5xx yaddah yaddah."

1843. FS: Complete Ten-TEc OMNI V Station

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-03 16:12:39 UTC
From: jonweiner@aol.com
Message-ID: <20010903121239.00741.00009674@mb-mq.aol.com>
Source record: 50037

I am selling my Ten-Tec Omni V station. Consists on the Ten-Tec Omni V model 562, matching speaker/power supply console model 961, desk mic model 705, and remote tuning knob model 301. Every filter slot is filled. Includes the standard 2.4kHz filter, as well as optional model 288 1.8kHz, model 285 .5kHz, and model 282 .25kHz, as well as model 219 .25kHz filter installed in the 9mHz IF. Built in noise blanker and speech processor.
The receiver section of the Omni V is considered by many to be the best receiver Ten-Tec has ever offered. Just back in May from Ten-Tec for an alignment and replacement of internal battery, as well as a complete check up. Includes the original manual, and original cartons. In excellent condition. Price for all: $1200.

Message-ID: <31b11dfa.0109030941.6588c4ba@posting.google.com>
Source record: 50042

Try this:

1. Exchange V 4 and V5 (12AT7's)

2. ADJUST both Carrier Balance controls (FRONT PANEL)for carrier null.

3. If there is difference try replacing (temporarily) both 12AT7's.

4. If this is no solution,then try cleaning the wafers(radio Shack "
Color TV tuner cleaner") on Function Switch (FS2F and FS2R) especially
wafer terminals 4,5,10 and 11 on both wafers.

5. Repeat step 2 above.

6. If this is no solution,then measure (Any Oscilloscope) for waveform
amplitude at both terminals 11 and 8 on FS2R FOR EQUAL WAVEFORMS using
a CONSTANT Audio sinewave tone (either direct or through your mike).

7. If they are equal waveforms(with the carrier nulled), check pins 1
and 2 of the SSB GENERATOR SUB-ASSEMBLY CONNECTOR and associated
wiring for continuity to bandswitch wafer BS1R. Clean the wafer WITH
(radio Shack " Color TV tuner cleaner").

IF YOU ELECT TO CURE PRIOR TO SALE YOUR UNIT WOULD BE MORE MARKETABLE!

GL es 73 OM ...-.-

I once had a "price policeman" tell me a certain item I had listed for sale, not on Ebay, was a piece of junk and I would be lucky to get 25% of what I asked. I had 11 replies, all wanting to buy the item at my asking price, and I sold it to the first person wanting to buy it. So comments like this have no meaning at all, so quit wasting your time, nobody gives a rat's ass about your "price police" opinions.
OTOH, most people have never heard of or seen such a receiver. So maybe it is/isn't worth the money, but you nor I have any idea of its real value. That's why it's on Ebay, the market will dictate the value. Also, how could YOU possibly know the item is "a piece of junk"? Do you, or have you ever owned one/this one? I doubt it. I'll bet you'd buy that "piece of junk" for $100, if you had $100.

From: jburgwynjr@aol.com
Message-ID: <20010903144123.20328.00004563@mb-fb.aol.com>
Source record: 49844

My BC-610F is available for sale for pick up only at the Rocky Mount-Wilson, NC airport. This unit is on casters and is made by Bogen. It is complete less a pair of original 4 mfd, 4000 vdc oil caps which were to be replaced by an uninstalled matched pair of GE caps and extra 4 unmatched ones. It has all the tags, meters, knobs, but the lettering has been covered by a coat of paint. Otherewise complete with tubes. Large box of coils and tuning units. Do not think it has the 160 option. Lots of crystals and box of spare fuses, several misc carbon mics, a box of other misc items, several manuals, and the following specific items:
(1) BC-939B Antenna Tuning Unit by Barker & Williamson
(1) BC-614E Speech Amp, General Telephone.
(1) T-17B Shure Mic, NIB.
Price: 875.00 with pick -up only. Thanks, John Burgwyn W4WAW or jburgwynjr@aol.com

1851. Wanted: Knob for Johnson 122 VFO

I acquired a 210x and someone had swapped the knobs. The VFO knob had a skirt with the 1KHz graduations on it, so I would like to find one. A whole set of original knobs would be okay too.

Please let me know what you have.

Thanks

Tim

Hello Group,
I am looking for a good boatanchor for short-wave program listening. I am not a collector and I'm not that concerned with cosmetics but I want a receiver that has true frequency alignment, fresh tubes and fully operational. I don't have a lot of money to put into a boatanchor so I'm looking for a good buy.
Thanks,
Bart

Hi everyone, This months CCA First Wednesday AM Night will be Special!

The James Millen Society (JMS) in cooperation with the Antique Wireless
Association (AWA) will operate W1HRX September 5 through September 8, 2001
in
celebration of the 100th Anniversary of James Millen's birth. Millen's
1930's KW AM
transmitter will be used during the operation on 75M AM. This will be the
first time that
Millen's W1HRX call sign has been used with his original transmitter since
the late
1930's! Special QSL cards will be available, business size SASE Required,
for
all confirmed contacts and SWL reports.
QSL to The James Millen Society, 4805 64th Ave. Kenosha, WI 53144.
Operation updates will be posted at http://www.qsl.net/jms

W1HRX will be on 3880 or 3885 depending on
crystal/vfo availability. (we are trying for 3880)

W1HRX will on the following times:
Wednesday September 5, 2001: 4:00-5:00PM EST AM Phone
7:00-9:00PM EST AM
Phone
again on either 3880 or 3885.
This will give us all a chance to work W1HRX . When W1HRX signs off Jim
W0NKL
with pick up with the CCA AM Night Midwest section. We will then continue
on
across the country with our regular times and Net Control Stations.
(Jim WA0LSB at 08:00pm MDT in the Mountain States
then Bill N6PY at 08:00pm PDT on the West Coast)

Don't miss this exciting night!
73's

Don Buska, N9OO
President - The James Millen Society

>of rescinded later so I may not get it anyway). Just wondering...

How much was he asking?

Years and years ago I had an SX-99. Cost me $40. Original price was $150. A decent receiver for its time and complexity. The S-85 is the economy version of the same design, without the S-meter and xtal filter.

Good points are that it has all the basics (1 RF, 2 AF stages, xtal filter, S meter, calibrated bandspread, AVC, ANL, BFO pitch, etc.). It's easy to work on and uses common metal and glass octal tubes. No trick circuits or unusual parts. Decent manual and you can align it without a lab full of special test gear.

Weaknesses are drift, dial calibration, and general perfomance on the higher bands. Selectivity is about as good as can be expected from a single-xtal filter and two 455 kc. IF stages. Because it's a single-conversion 455 kc. IF metal-tube receiver with one RF stage, the performance above 10 Mc. or so is somewhat limited, but no more so than any similar receiver. I'm not sure if it has calibrated bandspread on 160 meters.

For AM and CW use on 160, 80 and 40 it will do a decent job.

> Sorry, not interested in 6SN7GTA or GTB types....

The military spec 6SN7s like VT231 and 6SN7W are better
because their military training makes all the electrons
march in phase to the plate.
No out-of-step current flow to mess with your music!

The metal base ones produce more "sonically pure" audio,
with "solid overtones" and "stronger sound stage" because
of the iron in the metal keeps the electrons from being anemic.
No weak electrons making those harmonics droop.
Also, the metal base gives the tube elements better support,
so your music doesn't sound "shaky."

What other wonderful, magical reasons can you think of
for the superiority of metal based or Mil Spec 6SN7s?

The truth is that the Great Audio Gurus (GAGs) have already
pawned off their stock of 6SN7GTA/GTB to the congregation,
and now are writing articles on the "superior" performance
of the other 6SN7 types.
They just happen to have a warehouse full of them, too.
When this stock is depeted, we'll suddenly find out
that the next type in their stockpile is just peachy wonderful.

Line the sheep up, Martha. It's shearing time again!

If your main interest is shortwave listening, rather than collecting or nostalgia, then why not buy a modern solid-state receiver? Not to discourage you from getting an old tube receiver if that's what you really want -- I own several myself! But a modern set will provide excellent performance at a reasonable price. And you'll have a radio you can lift with one hand, rather than a forklift.

If you go to the rec.radio.shortwave newsgroup, you will find a number of recommendations under the discussion titled "Recommended Radio for Beginner" dated 8/29/01.

Selling my Hammarlund HQ-170. Aligned in 2000, it works
well on all ham bands. Switches work, but not 100% clean (e.g.
some noise when switching bands, modes, etc. but they work well).

Physical condition: good. Clean with minor scratches.
Plastic is pretty clear. Does not have the clock.

Located in Tinton Falls, NJ.

Buyer pays $150 plus actual shipping.

Offers considered.

Ever get one of those radios that has a nasty coat of
yellow ick from being in the same room with a heavy smoker?
This guy's lungs must have looked like the inside of a
1912 coal fired London smoke stack--- uggh!
You military guys will know what I mean if I say
it looks like it's been MFPed with a dirty paintbrush.

I've heard the best way to clean this stuff is just
plain water and elbow grease.
Anyone have other suggestions or experiences?

Thanks,
Dave S.

WHen I was doing [mumble] maintenance in the USAF, we used the
stuff by the case, cleaning every damn part of the [mumble] gear.
Worked great, except it did have a tendency to take a bit of
paint off if you used too much elbow grease.

Household cleaners like "fantastic" or "409".. just pray it on and wipe it off with a paper towel.don`t leave it on the front panels very long as it will sometimes remove the lettering. after it comes clean wipe it with alcohol to remove any residue..actually the smoke and tar seem to preserve the paint very well..,as you remove the yellow the paint suddenly comes alive almost like new.Good luck W4PQW

If you're daring, the original Tri-Sodium-Phosphate.
Not the new stuff climing to be Triple Strength P(somthing).

Otherwise, use either simple green or that orange cleaner.

Hi John:

I too was insulted by a "price patrolman" who said I was cheating. I got really pissed and was going to the guy's house (5-6 hours away) and introduce him to my seller patrolman's fist. But saner thoughts eventually prevailed.

But for a day or two I understood Internet-rage. Being insulted as a thief around the world is a real blood pressure raiser!
Although I would never ever support any extreme action, I do understand how that Vermont guy was driven to murder another guy who cheated him on the internet a few years ago. But letting your emotions go that far is sick.

I had a 3010C once, it was pretty and interesting, but not worth keeping, so I took $600 (oops, stole $600) from a guy who really wanted it.

I'd just put a few drops of Proctor & Gamble's "Dawn" in some water, stir it up, dip a sponge in, and rub the radio surface. Try it out in one area; see what it does. Dawn sure cuts the grease on dishes; might do the same for cigarette yuk.

True. My SX-28 faceplate was coated with 'yellow' when I aquired it. I had to put the faceplate out in the yard, cover it with 409 and hose the damn thing off. What a mess! But the paint and lettering underneath look pretty damn good now.

The tabletop (particularly behind my rig) gets very dusty. Left alone,
little spiders will make there homes there.
I always figured old T shirts with some endust was the best duster.
I found something better!
Pull-out dusting sheets called SWIFFER.
At the grocery store with cleaning junk.
They work GREAT! They actually do what they say they do. They pick up
the dust and do not just push it around. Totally dry, so no smears. Even AOK
for front panels. Does a good job on wrinkle paint rigs also.
I don't usually plug stuff like this, but if you give it a try, you will see
why I did.
Regards....Dave

Source record: 49947

The capacitor connections on the 38C are as follows:

Yellow 40UF Term strip/red audio output transformer lead
Yellow 40UF Pin 4 of 50L6
Red 60UF Term strip 22ohm and 220 ohm
Blue 20UF Pin 8 of 50L6
Black Common Pin 7 of 50L6

The terminal strip mentioned is the one on the back edge of the chassis towards the outside edge of the phone plug. Let me know if this is not clear.

Source record: 49950

Have: nice Collins 51J-4 that I'd like to trade for a late model 160-2 box like the ICOM IC-746 or Yeasu FT-847. Before you laugh too hard consider that anybody can own one of those appliances simply by exercising the old credit card. You just can't easily find nice iron, well mostly aluminum like the famous 51J-4. And as you well know, your appliance radio's value is falling as you read this. In a few years, ebay willing, run of the mill 51J-4s will be in the mid four figures when you can find one. Mint 'J-4s are solidly there now! It's an investment, not just a great radio.
So, about my radio; it is, except for a reversible product detector mod and some hammertone gray paint on the side panels, stock. No holes drilled in it except at the Collins factory. It is missing the CW filter and the hold down clamp for the filter cap but is otherwise all there. Has a non stock tuning knob but I've got a line on a real one. Works good on all bands and is very clean inside.
So, if you are interested, email me. I am in southeastern Michigan. BTW, the radio will be taken to the Findlay Ohio swap on Sunday. Maybe to swap.

You aren't wrong...a more diplomatic reply might be to say you are mistaken!
Its a 75S-3 as advertised...which, in a grossly oversimplified explanation,
was a 75S-3B with a KWM-2A style crystal deck selector added to provide
extra coverage and minor circuit improvements over the 3B.

Clear ammonia from the supermarket. Apply liberally full strength with a small brush (like an acid brush available at Home Depot in the plumbing soldering supplies area). Let the ammonia soak in for several minutes and then brush thoroughly and wipe dry with paper towels. I use it on chassis, plastic and glass dial covers, plastic cabinets and even wood cabinets (using a paper towel dampened with the ammonia). Works great, leaves no residue and doesn't damage anything.

Prolonged use of ammonia is not recommended for certain plastics (acrylic, in particular) according to a spec sheet I have. The continuous use of ammonia and ammonia based products (Windex, for example) leads to 'crazing' or a hazing of the surface.

That brings back horrible visions of my youth.

My mom was convinced that "We'd always done it that way."
So I was washing the windows on the house with newsprint
and a bucket of amonia. While EVERYONE ELSE was
using windex and paper towels.

The only thing I have heard of that may be dangerous to use is
'Fantastik'. I always considered it to be a 409 brand equivalent but
apparently it can attack.
From my experience, regular ole dish detergent seems to be as good as
the more exotic concoctions. If it were bakelite and keeps rinsing
brown, you better stop because you are eating away at the original
finish, not just tobacco sludge.

I had wonderful results with Go-Jo waterless hand cleaner on my Collins 30S-1 which was also owned by a pipe smoker. You'd swaer he blew every single puff into the amplifier with the HV on!!

The only caution is to not use it on plastic parts, as it can apparently damage it after some peiod of time.

Pu the Go-Jo on, let it sit about a minute and then wipe off...repeat as needed. Then wash off any residue with mild soap and water.

Also...have LOTS of rags available to rub it off, as the stuff is REALLY repulsive when it comes off.

Oh dear, I was afraid you'd say that. I'm looking for a new front panel
for a Icom 745, btw, if somebody has one. I tried like the dickens to
minimize the effects of the Caribbean salt air with careful maintenance
and lots of tender rubbing but I'm afraid that the lettering finally
wore off...moreso from regular cleaning.
What I want to see is a product that PREVENTS cobwebs under my BA
chassis...not just something to sweep them away.

I've had good luck with foaming bathroom cleanser, probably because I can watch the yello ook-ola rise to the surface! I let it work until the foam recedes and then rinse the heck out of it. Speaking from bitter personal experience, Castrol and 409 WILL dissolve some paints. If you want to be careful, whip up some suds with a neutral pH soap like Dr. Bronner's (don't forget to read the label- it's a hoot!), and carefully sponge away- that's how they would do it at the museum. In general, start of with the mildest possible solution and work up to the more radical. Andrew

What I do to reduce "cleaning" wear is to use a small fine bristle
paint brush to dust off my rigs. Works great and makes no wear on the
lettering etc. If I have to actually clean a front, I use a small wad
of toilet paper tissue and either a small amount of plain water or
windex. Windex works great normally, but I would always want to test
it first on a new rig. So far I've never seen it hurt paint. If in
doubt , I would use plain water. The toilet paper if wet makes very
little wear. I never use a course towel like a kitchen paper towel.
Those can scratch in some cases. I had to clean the front of my 830
after field day this last year. Windex and a toilet paper made it look
like new on the front. P.S. I don't actually spray the windex on the
radios, I just spray a little dab on the toilet paper wad to get it
wet. I go back over it with my paint brush to clean the "paper lint"
off if needed. MK

Normally, I don't like "me too" posts, but MK is right on with this one
and deserves some support. I have done everything he says for years and
the results are excellent. The only minor difference is I use a "large"
bristle brush instead of a small one. :-)

Hello all ... I bough a small shop vac with a nice brush head. It is about the size of a coffee can and boy does it have the power. I have tried using those battery powered pieces of crap to no avail. It successfully removes dust from behind the face plate of my 940 in just one pass. The unit is made by ShopVac and was about $20 at Lowes.

On the way home from work last night (after posting), I realized that it had to have been a 75S-3, especially since the 200 hz filter was underneath the chassis. Hopefully the seller has a friend out there who will alert him about it. Who ever did that really desecrated a nice receiver by changing the escutcheon...and to a 75S-3C model at that. I would imagine that someone would pay big bucks for a 75S-3C escutcheon and it was obviously done to mislead. Also, I bet it was indead a KWM-2A added crystal deck assembly and not the kit. Don't get me wrong...by no means am I flaming the seller (or eBay either), I bet he doesn't know anything about it. To me, it's only value is in parts. I surely hope this doesn't start a big we-we contest as I certianly didn't mean for it to. On a final thought...anyone want to bet $10 that the weighted knob is gone?! JP

You are partially correct, in that it is not a "real" (read: production model) 75S-3C. The "eyebrows" are narrow, it has the concentric volume and RF gain, so its probably a converted (crystal deck added) 75S-3A or B. One would have to see if the filters are shielded, or not, to determine exactly what its vintage is.

I have seen only one Breting. If it's like the one I saw, it is a very beautiful radio to look at, with a fine feel to the tuning. Unusually pretty main dial, not the usual all-business comm rx styling. Several gangs on the tuning condenser should give good performance. ISTR the one I saw was stickered at about $200.

The one I use is a 1.5 inch wide model with about 2 inch long
bristles. I use it for nothing but dusting radios to keep it clean.
It's not real small. I actually should have said to use soft bristles.
Thats more important. You wouldn't want to use stiff hard bristles as
they could scratch.

And just because the bristles feel soft to you, doesn't mean they
are soft. Some synthetic fibers (polyester, nylon, etc) used in
brushes feels soft because it is so fine. However it is actually a
very hard material and the ends can be sharp and hard enough to
scratch plastic. I tend to prefer a horse hair brush, but pig
bristle (cheap "natural fiber" brushes from asian countries) are
usually OK as well.

Date: 2001-09-05 22:40:37 UTC
From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <3B96A9E5.E5D15FA8@erols.com>
Source record: 49980

I have the following equipment up for sale. It can be demonstrated and picked-up in the DC/MD suburban area.

Yaesu FT990AC as-new, mic, TCXO option (NTIA compliant) $940 (boxes, too..., I think)
EF Johnson Valiant I (W4PNT cabinet/front panel paint), excellent, on the air, $595
EF Johnson Viking II/122 VFO, ER audio mods, nice. $250/pair
Drake TR7,PS7,RV7,MS7,MN2700, books, Drake desk mic, on the air $595
Drake L4B/PS, Eimac tubes, excellent cond., on the air. $695
R-392 (Collins), excellent, w/ cable, spkr, and p.s. $250
Hammarlund SP-600-JX-21 (not ex-mil) w/ factory cabinet, original manual, excellent $750
Gonset GSB-100 SSB tx., works fine, no cabinet (currently in rack), book. $150
R-390A (EAC), very excellent, audio amp, no covers. $400

Why sell? Drop by the shack and you'll see why.....

Again, all the above are currently "installed" and on the air and all documentation, to include any mods available. Pick-up (only) at my QTH just outside D.C. Thanks de K3HVG

Hey guys - thank you for the info. I talked to the vendor (a local ham
that I have known for man years). He will be pulling the ebay ad ASAP and
will relist it with the full info - much of which all of you have provided.
He has quite a few Collins S-Lines (complete) plus some of their other rigs
to sell over the next few months. Thanks for the info and please do not dis
him he is a good guy and welcomes comments on such matters.
If anyone has a comment or message for him please send to me.

"doran platt" <doran.platt@noaa.gov> wrote in message
news:3B9639A9.32C00D9F@noaa.gov...
Well, heck.... one does have to look at all the pictures! Its a 75S-3A..
don't you all think? Concentric knobs?
doran platt wrote:
You are partially correct, in that it is not a "real" (read: production
model) 75S-3C. The "eyebrows" are narrow, it has the concentric volume and
RF gain, so its probably a converted (crystal deck added) 75S-3A or B. One
would have to see if the filters are shielded, or not, to determine exactly
what its vintage is.
AE4EN wrote:
Hopefully I am wrong about this...but it sure looks like a 75S-1 (or
75S-2 but I doubt it)
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1270410082
Wonder if someone should warn the high bidder and alert the seller?!!!

From: jcplpsm@aol.com
Message-ID: <20010905234618.09874.00000199@mb-fe.aol.com>
Source record: 49985

Cooper, I erred last night on my wiring for the filter cap on the 38C. The correct wiring is:

Yellowï¿½ 40UFï¿½ Term strip/red audio output transformer lead
Yellow 40UFï¿½ Pin 4 of 50L6
Redï¿½ 60UF Term strip 22ohm and 220 ohm
Blue 20UF Pin 8 of 50L6
Blackï¿½ Common Pin 6 of 50L6

The terminal strip mentioned is the one on the back edge of the chassis towards
the outside edge of the phone plug.ï¿½ Sorry for the confusion, let me know if this is not clear.

Message-ID: <c669064f.0109052014.b4460eb@posting.google.com>
Source record: 49990

My new Space Spanner just HUMS when turned on. I know the caps go bad
and can cause this on these old radios. Is there a common problem
with the Space Spanner when this happens?

1947. WTB: Johnson Courier Amplifier

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-06 04:57:37 UTC
From: w7ycn@aol.com
Message-ID: <20010906005737.07142.00000127@mb-fw.aol.com>
Source record: 49991

Thanks for reading. I am looking for a Johnson Courier amp to use with my Ranger II. I'd like it to be in excellent cosmetic and working condition. Cash - or trade for other Johson gear. I've got the Johnson 6n2 transmitter, 6n2 VFO, 6n2 Converter, T/R Switch, 275 Matchbox with SWR meter and bridge, and a Ranger II which used to work well but is now blowing fuses. Would trade all plus some cash for nice Courier.

73,

Pat (W7YCN)

1948. Question re : Heathkit SB301/401 Combo

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-06 05:12:16 UTC
From: ETE <ete@mindspring.com>
Message-ID: <9n7065$170$1@slb2.atl.mindspring.net>
Source record: 49992

I need information on whether the SB301/401 came in a late model version.

Also, what accessories such as filters, crystal kits and cabling harnesses are desirable options to look for.

I recently was too late in picking up some heath twins, and lost the opportunity to buy it. . Oh well, no one's fault but my own. The good part is that I now am starting at ground zero again.

I have already bought up a SB610, SB620, HP23A PS, SB600 Speaker, and SB200 amp. I also have a SB310 receiver but that is short wave.

Also, if a mint condition 301/401 set that works is available please email me . I am interested. This time Ill pick it up right away or pay shipping. :-) 73 Paul WB4JCY

Please feel free to emailme at ete@mindspring.com

Source record: 49896

I am selling off some of my Communication Receiver Collection. These receivers all work very well. They all are well about average condition, cosmetically, Very Good to Excellent Condition. They are complete and original. Digital pictures are available upon request.
1. Hallicrafters SX-100MKIA, $225;
2. Hammarlund HQ-145AC, Late one with Clock, Great on SSB. $275
3. Hammarlund HQ-145A, No Clock, $225;
4. Hammarlund HQ-140X, Very Nice, Original Manual Included, $250;
5. Original Speaker for Above HQ-140X, $50 with receiver only;
All Prices Do Not Include Shipping Costs. I will Double Box and Pack them so that they will not be damaged. No Charge for Packing. Buyer pays actual shipping charges. If you are looking for one or more of the above listed receivers, it would
be hard to find nicer ones. Thanks, Charlie Hugg, K5MBX

1955. WTB: Up to 3 Johnson KW MatchBoxes

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-06 12:11:11 UTC
From: "David J. Windisch" <davidw@copper.net>
Message-ID: <hKJl7.95$3E6.72146@newsfeed.slurp.net>
Source record: 49899

I have 2, now -- thank-you to the good-guy sellers.

Looking for the third, pls.

Remember, this ain't EBAY.

I may be crazy and stupid for wanting 3 of these boxes, with their limitations, but I ain't stupid and crazy enough to take any of the seriously-inflated offers that I received among the ones I did take. 2 offers were for amounts exceeding some credit-card limits :o(((

However, I truly appreciate all offers, and should you need a shipping box, I now have a choice of two to send you, if we shake hands and do business.

Thanks and 73,

Dave, K3BHJ

1956. Help - Photocopy of manual for Eddystone 1002 wanted

Source record: 49900

Hi

I wonder if anyone can supply me with a photocopy of the manual for an Eddystone receiver model 1002 of around 1972 vintage? The only one I can find on the net costs more than I paid for the set (nearly $US40)!

I want to realign the FM band to match the dial and alter the voltage from 110 to 240v.

Simon

The Avo tube manual gives the average reading of
65Ma and 6.3 Ma/ volt. The second reading is to test for Grid current
this is done on a special amp with a 470R + 10R cathode resister and
470 k Grid resistor and polyprop caps to ensure there is no capacitor
leakage. The Ma reading is taken on a 10R
1% metal film
AVO Amp
1. *78ma-6.5ma /volt 62Ma-0
2. *70ma-6.0ma/volt. 62ma-0
3. *78 6.3 62ma-0
4. *90 7.0 62-0
5. *95 6.8 64ma-0
6. *70 6.0 black with haltron & GEC stamp 62-0
7. *65 6.0 black with Haltron & GEC stamp. 62-0
8. 80 6.5 with spigot clear 62-0
9. 75 6.0 with spigot clear 62-0
10. 85 7 black with spigot has a Marconi label & GEC stamp 62-0
* no Spigot

1969. FS: Collins KWM-2 & 516F-2

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-07 01:04:21 UTC
From: jonweiner@aol.com
Message-ID: <20010906210421.16445.00000444@mb-fc.aol.com>
Source record: 49912

I have for sale a Collins KWM-2 transceiver & 516F-2 power supply. The transceiver is winged emblem, with near perfect front panel, knobs, and chassis. The cabinet has not dents or dings, but was repainted. The power supply has the original cables and connectors. Also included is the original instruction manual and copies of all KWM-2 service bulletins. Photos available. I will be away most Friday, Saturday, and Sunday, so if it isn't sold before I leave I will have to wait until Monday to respond. Price $950., either for pick up at Greenville, SC, or plus shipping.

Jon, K1VVC

I probably am late with this thread, but I worked in the tv repair
business for 16 years. 50% ammonia, 50% water works great.
Many would be surprised how a CRT can become much brighter
after a 1 minute application with paper towel swab. The formula also works very well
on knobs and *plates.
* (Don't ask me how to spell escrusian, but old timer's know what I mean).

1980. $54 for BC-312D military rcvr

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-07 12:40:46 UTC
From: gspubl@tca.net
Message-ID: <3b98c01f.773105306@news.tamu.edu>
Source record: 49925

$54 for a military BC-312 receiver is awfully cheap. 2 days left on
this item (closes Sunday):
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1271547195

1981. Eico, Knightkit, Kenwood collectors

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-07 12:54:32 UTC
From: gspubl@tca.net
Message-ID: <3b98c355.773927328@news.tamu.edu>
Source record: 49924

I had a friend of mine put the following items up for bid for me:
1. Kenwood HC-10 world time clock,
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1271558561
2. Eico 717 Electronic keyer,
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1271553321
3. New Knightkit KG-375 Ignition Analyzer,
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1271564126
The auction ends Sunday and from the lack of interest they'll
probably go very cheap.

1982. Need 51J-4 output Trans.

Any WebPages or kits on doing engraved white lettering, I need to re-do a
R-390 "NON A" panel.
This is not the silk-screened A model that services do.
I assume the old filler must come completely out and there is some leveling,
and rub out process

Joe,
They make 'paint sticks' that you can just apply and wipe right off and
the paint stays in the grooves. Takes a bit of practice but works
well. I've done it with plain old white enamel and a paper towel
moistened with mineral spirits. Don't use lacquer...it might damage the
remaining surface.

Mr. Miles,

I'm very sorry if I have offended you. I did not relies that cross posting
to more than one news group was considered spamming. OR IS IT?

I was simply trying a common sense approach to reach as many people as I
could with a one line question.Which by the way was answered by many,both by
postings and email.

Again thanks for your unkindly comments. I did ask for any and all.

EICO Model 717 Keyer. Chassis is dusty but no significant corrosion. Cabinet is excellent. Front Panel is good with minor wear around the on-off switch. There is a small part of the "K" in the Keyer logo worn off on the front panel. I have replaced the AC Line cord grommet where it enters the chassis. The keyer works fine but has not been used for several years. No manual or schematic but these are available on Bama. Price is $65 plus shipping.

Vibroplex Vibro Keyer Standard S/N 264109 with the 833 Broadway address. The thumb piece is missing and replaced with a black piece from some other key. Replacement thumb piece is probably available from Vibroplex. No corrosion or chips in the base. This is the key that was used with the 717 until several years ago when I went back to a bug. Price is $65 plus shipping.

If both are sold to the same buyer and shipped to the same address the price for both pieces is $115 plus shipping.

2001. WTB Homebrew rigs, me to!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-08 00:16:16 UTC

Hi,

I have posted this before but with only one response. I really enjoy fixing up old homebrew tube or solid state receivers and tube transmitters. I'm interseted in very simple or very complex homebrew rigs!

If you have one that you want to sell and open up some space at home, drop me an email at enigma_y_2000@yahoo and let me know what you have and what the price would be.

Thanks in advance,

Bob

ok if it is engraved groove. have any experience with e. g , a bc348 panel.
these seem to be raised lettering which often gets lost when repainting.
ther does not seem to be anyway to put raised lettering back.
or am i wrong?

Johnson Ranger I for sale.
Nice condition, probably an 8, Has usual Ranger I scuffs on some of the corners. New HV electrolytics in 98 and I think I replaced all other older caps and out of spec resistors at that time. Has crystal case cover and white pieces on all appropriate knobs. Will not ship but will meet someone within reasonable distance of south central Connecticut, or subject to prior sale will hold and deliver to Hosstraders.
Price $275 OBO

2026. FS Drake C line pacakge

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-08 17:09:43 UTC
From: k9sqg@aol.com
Message-ID: <20010908130943.07462.00000425@mb-fj.aol.com>
Source record: 49819

Offering for sale a Drake C line as a package. If it doesn't sell in a month or so, I will consider letting pieces go individually. Gear is in a 9 condition on a 10 point scale. I'll mention what is included and the "low to average" market price for each item, and then give my package price at the end. The receiver sounds fine on all the bands I tried, and the transmitter has gotten good audio reports on 40 SSB, about the only band I operate. It provides 140 watts DC output.

R4C, SN 20, 296 so this is a mid production run I believe. ($200).
All three filters on the back (total $150).
Internal AM filter ($100 if you can find them).
Noise blanker ($100).
Six extra crystals, for 10 mhz, two for 160, three for 10m (total $50).
MS-4 speaker ($50).
T4XC, SN 23,430 ($100).
AC-4 power supply ($75).
Connecting cables, original ($25).
Original manuals ($25 for the pair).

If my math is right, that comes to a total of $875. I'm selling the complete package for $700, UPS shipping is extra. I will only ship CONUS.

Thanks for reading the posting.

73s,

Evan

ARRGGG: No!! Don't use any ammonia-based cleaner (Windex, Tuff Stuff, etc.) It WILL dull the paint, and/or take it off. It hazes any plastic, too. I learned this the hard way.

The safest is Dawn diswashing liquid or Murphy's Oil Soap and a soft-bristled brush or toothbrush. Nearly anything will melt off that nicotine, but not safely!

-Brad, NB9M

Hi Tim,

The TS 820S Service manual only lists the entire Bandswitch (S3) part number.

it is : S01-1038-05 ROTARY SWITCH

HOPE THIS HELPS.

73,

RICH

2033. FS: Johnson Ranger I

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-09 00:30:03 UTC
From: Ron Eisenbrey <ab5wg@mylinuxisp.com>
Message-ID: <3b9ab7a9@news3.mylinuxisp.com>
Source record: 49827

This rig was purchased years ago as a project radio for restoration. It is now more years and never had time to get too it. Condition overall is fair, needs some clean up and TLC. Cabinet has normal scratches, panel has multiple places where the paint is rubbed out. My intent was to refinish the panel and cabinet. It is all there, including the long bolts in the cabinet. A previous owner started a restoration as evidenced by capacitor replacements and a three conductor power cord. I have not tested this rig nor do I have the time or inclination. The modulator tubes in the rig are 6L6's, not original, but I do have a pair of good original 1614 modulator tubes that are included with the deal. Reproduction manual complete with fold out schematic is included also. Sold as a project radio as is.
I have a full set of .jpeg pictures available for any interested buyers. This will be a nice winter project for somebody. $160 plus shipping from Texas, prefer pickup, but can ship.

Thanks,

Ron, AB5WG

2035. Dentron GLA-1000 Amplifier "10 Meter Problems"

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-09 01:45:00 UTC
From: ko4nrbs@yahoo.com
Message-ID: <a25f10b8.0109081745.8f16a84@posting.google.com>
Source record: 49829

What kind of problems have you run into trying to
get the Dentron GLA-1000 to operate on 10 meters?
I did the 10 meter mod but can't get much power out
(100 watts or less with 100 watts of drive). I'm
tuning the input to the amp with the auto tuner in my
850S Kenwood. I also tried it with the tuner out of the line. The
other bands work ok.

2043. FS: Drake TR-7s

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-09 11:50:48 UTC
From: k9sqg@aol.com
Message-ID: <20010909075048.02979.00000810@mb-fg.aol.com>
Source record: 49837

Have two Drake TR-7 stations for sale. I'd say both are in a 9 condition, include the PS-7 heavy duty power supply, DR-7 digital readout and original owner's manuals, and are completely stock...no optional filters, fans, noise blanker, AUX-7 board, etc. I can provide a copy of the service manual if you need it.

The first station has a TR-7 with a serial number of 283, and the power supply 361. The pair are being sold for $450 plus UPS shipping, CONUS only.

The second station has a TR-7 with a serial number of 3346, and the power supply 5634. The pair are being sold for $500 plus UPS shipping, CONUS only.

If you want both, I could offer you a package price.

Thanks for reading this posting.

73s,

Evan

2044. FA LAST DAY *MACKEY 3010C RECEIVER*

Newsgroup: rec.radio.amateur.boatanchors

This is one of the finest receivers ever made. The reserve is much lower than the buy it now price. If you are not familiar with it, it's the most sensitive receiver with great selectivity and excellent audio quality. It uses a fiber tape that turns very smoothly with the frequencies on it, kinda like the Racal. Please take a look . http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1271522293

2060. F.S.Very Rare Vintage Hallicrafters SX73

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-09 21:42:45 UTC
From: john surace <jsrace@mindspring.com>
Message-ID: <9ngnt6usl1@slb5.atl.mindspring.net>
Source record: 49754

I have for sale a rare Hallicrafters SX73 receiver.Made in 1952 mainly for the miltary.It is a rack mount general coverage receiver with 6 bands with countinuous from 540hz to 54mhz.It is has a Superheterodyne single and double conversion with 19 tubes.Precision anti backlash gear train for extremely close calibration and accurate resetability.The VFO is on the money.Extremely sensitive.The selectivity is great also!The SX73 cost $975 in 1952.It is a very collectable item.The best receiver hallicrafters ever made! The condition of this radio is very good.Hardly a mark on the face plate and plays very well.This receiver has no modifications strictly stock.No holes drilled thru case ect.Reason for selling is my first beam antenna is on the way.If it doesn't sell it will be put up for auction in a week. Buyer pays shipping and handling from zip 10956.I am asking $675.00 E-mail me for any questions.thanks

I remember that QST would admonish to place iron at 90-deg. This was to limit (I suppose) interaction (mutual coupling) between windings. I think this was directed only at open frame type units. Fully enclosed iron should not have this potential problem.

2065. FA MACKAY 3010C $1275

Bob - Might suggest an old trick. Before placing the choke in a final
location. Fire up the other transformers. Connect a pair of ear phones or
a small amplifier to the choke winding and move it around the chassis until
a spot of minimum hum is noted.

Enjoy,

73 Bob W7AVK

Source record: 49763

depending on the shape/condition of the unit.... it will go between $2000 on the very low side for a rough unit (working but ugly) to up to and over $5000 for a nice complete presentable unit. A collector desk is worth more money than my family has seen in a long time, so I can't use numbers that high.

Interesting situation here...

As of the time I am posting this, N1RZB had received a total of eight responses to his inquiry, and not one of them had anything to do with answering his question! Instead of helping the guy, everyone gripes and whines about cross-posting!

Yeah, I know that there are both written and unwritten rules of "netiquette", and perhaps N1RZB shouldn't have posted his query to some of the groups that he did post to. But perhaps we need to take a closer look at this. What's happened to the hobby? What's happened to hams being helpful to each other? Instead of getting an answer to his question, all he gets is bitched at by a bunch of self-appointed "interenet cops". We keep hearing that ham radio is "dying out". It's no wonder! When someone can't get a straight answer to a valid ham radio question, or get ANY answer in this case, it ain't hard to see why people aren't sticking with the hobby. I've heard it said that the internet is killing ham radio. This is a perfect example!

I wish I *could* give this gentleman an answer, but I really have no personal experience with six meters. I'm sure I'll be flamed for cross-posting this message, and for being one of the people who isn't giving the guy any help. At least I'm WILLING to help... I'm just not ABLE to help.

I had good luck using paint sticks from Antique Electronic Supply to restore
the engraved lettering on my SX-28. I used a little plastic blade to level
off the paint, then went back later to clean up the surrounding areas. You
can read more details and see some photos at
http://antiqueradio.org/halli12.htm .

I've been looking at the new RCI 5054 (over Internet not in person yet) and thinking it didn't look like to bad of a deal ($300), I just wish it had the tone board already installed and not an 'add on' like it is now.

I have not done this, but a friend has used "dry transfer" letters to redo
that kind of lettering after repainting. You need to find a sheet of letters
of the right size and font, of course. I would also apply a coat of clear
lacquer (or whaever) to protect the new letters.

Unlike you, Dean, I don't have any poignant predictions to make about the future of the hobby, but it is VERY clear what will happen to the newsgroups if people aren't discouraged from cross-posting to ten groups at once. THAT insight doesn't require any soul-searching at all.

What the original poster did was every bit as much a part of "the hobby" as tuning up a 2KW transmitter in the middle of the band without bothering to turn on his receiver first. Crossposting to 10 unrelated groups is an act that could only indicate careless naivete on the part of a newbie, or extreme discourtesy on the part of someone who should know better. A quick check of Mr. Moge's extensive posting history on Deja will reveal which of those two options is most likely to apply here.

Followups set to the appropriate group...

I have two Heath HW-18 CAP transceivers that I don't need. The front panels are good, the cases fair.
One has an original mike the other has none. They would be a good source of parts, knobs, S-meters like the
ones used on Hw-100, or 101's, or sweep tubes if anyone need them, I think they are 6GE5's.They are modified
for 6 channel operation. .I also have an original manual in fair to good shape.

Anyone who wants or can use one make a offer (worth my time to pack and ship)
or I'll part them out for meters, knobs mike, tubes, xtals and manual or whatever.

Anyone have the proper version of the reversible Dallas Langford SSB mod for
the R-390 *NON A"
All the rookies and CB's have balled the web posts and boards up with the
abundant R-390 "A" version
Just need the diode placement, upping BFO injection is easy to figure out.
Remove NOSPAM
Joe
>>

To my knowledge, Dr. Lankford hasn't published a R-390 (non A) ssb agc
modification. Only the printed one for the R-390A/URR.

Source record: 49779

I am looking for an old GLASS, broadcast tube. Eimac number 750 TH It is about twice the size of a 4-1000A. I do not care about emmission. All I want is the filiaments to work for a lited tube display. Socket also if available.

Or any other GLASS tubes of that caliber or larger for the display.

k9vdd@home.com

2086. Want: 6 meter Gonset Amp with 826 Tubes

Source record: 49780

In the 60's Gonset made a small 6 meter amp with a pair of 826's. I believe the model number is 3212. It had a small window in the front panel. I would like to buy one of these amps.

2087. Re: WTB EIMAC 750 TH TUBE

The ISP isn't acting right, so I can't check the ad.

But what makes you think this is an "audio pre-amp"?

At one time, Gonset made a VFO that could be FM'd. This was
before the repeater boom of the late sixties. Without
being able to see the picture of your unit, I can't
be certain, but I suspect that if you have a Gonset VFO
with a microphone jack, that's what this unit is.

From a Gonset ad in the May 1961 edition of QST, on
page 115 (I stopped looking once I found one ad that covered
the unit, so looking further might turn up better details; I
know there was a review of a late model Gonset Communicator
in 73 magazine that gave mention of this VFO and might have had
a picture):

"New VFO...for all Communicator models!
Single VFO model now works with Communicator 1, II, III an IV.
Has dial calibrated for 6, 2, and 1 1/4 meter bands. Microphone
connector and FM modulator provided for Narrow Band FM operation."

And there's a price list at the bottom of the page that includes:
VFO for Communicators (Delivery in June 1961).....#3357...$69.50

It would be nice to see more information about these old rigs
instead of the ads in rec.radio.amateur.boatanchors

From: Robert Leamy <rleamy@alltel.net>
Message-ID: <3B9D8A08.D5685DE6@alltel.net>
Source record: 49785

I have just obtained a Hallicrafters S-22 Skyrider Marine receiver. I need to replace the plastic cursor on the top of the main tuning dial. Does anyone have an extra one laying around which you would be willing to sell? Or would someone who has an S-22 be kind enough to remove the cursor and make me a tracing? I would also need to know the thickness of the plastic. The piece comes off easily by hand with removable of two mounting screws. Any help or advice would be appreciated.
Thanks, ..Robb WB8BHU

Hi
I have a nice working and looking AN/URR-35b 225mhz-400mhz receiver for for trade. I can email a picture if interested, I just checked it on the hp608d, and she beat spec on sensitivity , moslty 3uv across the band. Audio sounds nice as well. Both meters works, heck, everything on it works!

Anyway, before I list it on "E youknow where", I thought soemone might be up for a trade for R390a stuff. I am looking for any/all of the modules, especially IF decks and PTO and audio. Meters as well.

Let me know what you have, email directly.
thanks

Maybe he thinks it's an audio pream because it says so on the front or because I had one in the 1950s and used it with my Communicator and it was an audio preamp. Perhaps you have things working now and can verify that.

Actually you could FM the rig just by modulating it with FM but with the wide as a barn door receivers that were the norm at the time nobody knew any difference except those few running converters into decent HF receivers.

You may well be right that it also could be used as a narrowband FM modulator. Maybe there's a switch for that but since all my operation during that period was on AM I don't recall the details.

Hi....I'm interested in the Johnson Thunderbolt Amplifer.....I did own a viking 11 years ago , but I never liked it...I really wanted a Viking Valiant. Anyway Curious...I think the Thunderbolt Covers 10-80 Meters ? AM & CW if I remember correctly ..The Amplifer, was rated at 1000 Watts or 1 Kilowatt Input...Don't remember what they used for a Tube??

If you get a chance drop me some more detailed info on the amp....a scanned photo would be excellent...

We live in the Ft. Worth area. Haven't seen to many Military rigs show up around here.

But I'll keep my eye's peeled. Never know might show up in a antique store. Cause some of these places don't do background checks on people.

What I'm wondering. Is how in the heavens the theif got his hands on the rig in question to begin with.

Who had possesion of it. How did the theif get it. Where was the rig when stolen. Was there any leads on how they got away with it. Like leaving something behind in there wake when they stole it.

Or did they talk to anyone in the aera they stole it from sayiong where the person might be from.

I mean stolen either in the LA area or Dallas Tx area. That's a big span of territory. Just where was the rig when stolen. California to Texas.

It's gonna take alot to find that one. Let alone if it ever shows up.

You better put stolen bulletons on every broard on the internet if your gonna ven have a chance at finding this one.

I wish you lots of luck.

Paula In Ft. Worth Texas.

"World Peace" my foot.
"Peace" and "brotherhood" are sweet and cumfy ideas,
which are utterly impotent and powerless
in a world where there are people willing to do this.
Throughout history,
whining "peace peace" inevitably, invariably leads to war.

Personally, I'd like to turn a few terrorist harboring
nations into radioactive black glass.

Please give to help out, but be careful to whom you send donations.
There are some fraudulant appeals for money showing up on the net.
Also some phony "relief for survivors" funds.
Check into the organization before sending money.

There are legitimate funds being set up,
and they need our help,
but some scum bags are also hoping to cash in.
Check it out first.

Also- the Red Cross server is being overwhelmed.
You may have to be patient or wait until tomorrow to get through.

2118. Markings on Radio Dial

Newsgroup: rec.radio.amateur.boatanchors

Please excuse my ignorance, but:

On many old general coverage receivers I have noticed that at .640 Mc and at
1.240 Mc there is a "CD" mark. What does this mark mean? Was there some
Civil Defense broadcast at these frequencies?

Thanks!

Exactly right. In the event of a National Emergency, most BC
stations were to go off-air, and the rest were to broadcast
the same signal while varying power in hope of foiling radio
homers. Some would use 640KHz, and the others would use 1240.

Carl, these frequencies were "setaside" for emergency broadcasts, stations all over the country had provision to switch to one of these frequencies in time of emergency.
Hams also were required to monitor one of these freqs also...it was called "CONELRAD"...this was in the days of "bomb shelters" etc. Harold W4PQW

Hey Cal, the markings you speak of are part of the old "Conelrad" alert system used during the late '50's, early '60's. The theory behind it was that radio waves from broadcast stations could be used to guide missles to their targets, so, in the event of an attack, all radio and TV stations were shut down, and within a few minutes, the Conelrad stations would begin broadcasting news and information from there two stations on the frequencies of .640Mc and 1.240Mc. The "CD" marks on the radio dial were placed there to help in swift aquisition of the signal. Conelrad was supplanted by the "Emergency Broadcast System" in the middle '60's, which was nudged out by the "Emergency Alert System we use today".

Just shows you are younger than some of us, Cal! Those are markings from the "Cold War" era, mostly 50's, when we all had to fear the big nuke threat. IF there was an emergency, instructions were supposed to be broadcast at 640 and 1240 on the dials. You will find it on even car radios of that era. Called "CONELRAD" as I remember.

Source record: 49676

I have an original manual set for the R-390 receiver. It consists of AFTO 31R1-2URR-394 (Army: TM-11-5820-357-10P) "Operator's Manual w/ changes to 1976, also Field and Depot Maintenance Manual, T.O. 31R1-2URR-412 (Army: TM-11-5820-35) w/ changes to 1974. All manuals and changes are original and in excellent condition... no tears, spindles, folds, mutilations, nor 50-year old scotch tape.. Included is the AF standard "tech order" binder. Note that AFTO manuals (unlike Army TM's) are loose leaf and can be easily removed and copied without destroying the binding. I'll trade this original for a like-condition AF T.O or Army TM for the R-390A. Copies of manuals will not be considered. This manual is for trade....only . Thanks for the read.

The very first stereo broadcasts were broadcast by two radio stations, one carrying the left channel, the other the right channel. The radio stations would play CDs, with the out put being sent over phone lines to the two stations. I think this was in the mid-late fifties

>

More likely the 60's. It was called simulcast. Sometimes it was two radio stations, sometimes it was the TV for one channel and a radio station for the other. But it was not CDs...they weren't around until the early-to-mid 80's.

The CD on the dial was for Civil Defense...a.k.a. Conelrad...used in case of national emergency. Hams were required to monitor the Conelrad freqs (there were two of them) and the old ARRL handbooks have Conelrad monitoring circuits in them. Conelrad stood for CONtrol of ELectronic RADiation. The idea was that in case of an emergency (nuclear attack was the most likely scenario) all AM stations would go off the air except for the Conelrad stations. There were several of them around the country and they would alternate broadcasting so that they couldn't be used for homing in by the attackers (the Russians). At least that was the plan. This was back in the days of home bomb shelters, nuclear attack drills in schools, etc.

Jeez...I show my age...

Check out http://www.fas.org/nuke/guide/usa/c3i/conelrad.htm for more info.

You are correct in suspecting the caps. There is a 3 in 1 electrolytic filter cap that will need replacing.It is the large cylinder underneath the middle of the chassis fastened by a metal band and a screw. It can be easily replaced by cutting the leads to the old cap under the chassis, removing it if you want, and soldering on 3 new modern caps which are smaller. The values are two 30 mfd at 150 volts and one 20 mfd at 25 volts. Look at the wire color code on the side of the old cap to see which wires to solder the new caps to. The two red wires will go to the positive side of the 30mfd caps, and blue wire to the positive side of the 20 mfd cap. The single wire from the other end will connect to all 3 negative leads twisted together. I used zip ties to secure the new caps when I had to replace them on my unit. While you are at it, if the power cord is old and cracked you might want to replace it. Please be careful and not power up the radio out of the cabinet without an isolation transformers, since it could shock you. Hope this helps you. Mike KF6KXG

Hi folks,

I am about to collect a nice late model (serial #6933) Collins 51J-4. The unit is located in Northern Europe and I am in the UK so I haven't had a chance to closely inspect it but I have been told about its general condition. I was surprised to learn that it is fitted with 51S-1 control knobs. Does anyone know if these were fitted to late models or have they been changed sometime during its history?

Any help greatly appreciated.

Best regards

Mark

Some of those R388 receivers were used at Collins Radio Co. until relatively recently in their service center as test equipment. I could be one of those units that they might have fitted with some of those knobs. Also, it is not unusual to see some of the radios from their labs fitted with fiberglass like knobs that looked like this; they were either black skirted knobs or gray skirted knobs that had a bisecting line that had a ball on the end of that line. If it was a black knob, it would be a white line; if the knob was gray, it would be a black line. They were very good receivers. I know that there were at least a couple of SSB detector mods for these units, but for those who don't want to go into the innards of the receiver, I developed a good external SSB detector stage that uses an NE602. You just connect this circuit to the the I.F. output jack. I will send this information free of charge to interested parties.

No it was in the 50's. These were some of the first experimental CD's. They were not sold to the public which is probably why no one heard of them, but they had all of the radio dials marked so that people could find the programs.

>
> Ahhhhhhhh soooooooo.......clever. :)
>
> Bob 'POQ

Bob W7AVK's method is an excellent method. If the hum is significant
when placing the choke in a given practical location, adding a copper
strip "belly band" on the filament transformer and/or the choke, can
significantly reduce the coupling. Generally, this band is about 1/4"
narrower than the winding and is of about .015-.020" soft copper adn
is wrapped around the outside of the coil assembly and the OUTSIDE of
the core. the ends of the srtip are lapped and well soldered together.
The function of this band is to 'short out' any flux leaking from the
core due to the imperfect flux path, and thus force it back into the
core. It also has and effect on preventing external flux coupling into
the core.

From: "Sverre Holm (LA3ZA)" <svholm2@online.no>
Message-ID: <0X9o7.16231$1T5.181079@news1.oke.nextra.no>
Source record: 49696

I am not sure if my HP 5326B counter from the seventies qualifies as a boatanchor, but I'll try anyway.

The counter suffers from low sensitivity, about 50 mV rms rather than 5 mV rms as the specs say. The frequency range from
0 -50 MHz is fine, actually it is OK up to about 70 MHz. I have tried to understand the input stage and come across an
integrated circuit with 6 pins in a TO39 size can (same as a 2N1711, except 6 pins). Its designation is 5-334 7038 and it has
a symbol that I think is that of National Seminconductor (looks like an N on top of an S).

Does anyone know anything about this IC, or better yet are familiar with the input board of this counter (type no of board
is 05326-60003).

Thanks a lot

Sverre

Have: nice Collins 51J-4 that I'd like to trade for a ICOM IC-746. Price wise, they are running about the same these days on ebay with the ICOM depreciating and the 51J-4 appreciating. My radio is, except for a reversible product detector mod and some hammertone gray paint on the side panels, stock. No holes drilled in it except at the Collins factory. It is missing the 800 Hz filter and the hold down clamp for the filter cap but is otherwise all there including top and bottom covers. It was rack mounted so it has no cabinet. Also equipped with a non stock tuning knob but I've got a line on a real one. Works good on all bands and is very clean inside. So, if you are interested, email me. I am in southeastern Michigan.

Just like having a will in force. Its too bad that some collectors
either grossly inflate the value of their "stuff" to impress friends and
family or, conversely, deflate the value to justify its existence or
never discuss (much less document) its true value, at all. Either way,
the family is subjected to additional problems... at the worst possible
of times.

Sverre,
I cannot offer you much exact information, but the device you have is almost certainly a dual FET, very popular in "blue period" hp equipment. It probably has the full hp part number 1855-0334.

7038 is a date code, week 38 of 1970.

All the hp part numbers have a prefix, in this case 1855- , which indicates a FET. Linear and digital ICs were numbered 1820 and 1821 from memory. Silicon transistors 1853 and 1854. Somebody may have the full cross reference from hp to civilian numbers, but this is not one that I have come across before...
Good luck,
Dan AC6AO G3NCR

This is a new one for me,, I picked up a Japanese made, pair, STAR - SR-700A rcvr and ST-700 xmtr.twins. they were built for American market,all tubes,very nice design and workmanship... I have a problem in the detector,avc,bias circuit ..need a schematic of receiver and transmitter too ,if I can find it, whatever data I can get will be appreciated. Harold W4PQW (PS I just found a note in Shortwave Receivers 3rd edition ,says Star was bought out by Yaesu in1968)

2166. Re: Input stage of HP 5326 frequency counter

Thanks, I found from another source also that it probably is a dual FET.
That also makes sense from the schematics as far as I have been able to find
it by looking at the pcb, so that brings me one step closer.

This circuit is on a board that sits right behind the front-panel on both
channels A and B. It feeds a separate board with several discrete
transistors and some ICs. This board feeds back the voltage to the indicator
that says if the input is large enougth. The boards are the same for both
channels. It makes no difference if I swap them, so now I am not sure if the
sensitivity problem is in the first board (front-panel) or somewhere later.

Hi
The worst part is that there may be $35K worth of items
there. It looks like there are a lot of redundent units
of some sort. Without a list of items, I doubt anyone
would consider bidding.
A while back, there was a lady that had put up a text
description of a table radio, with no picture. Her
starting price was $300. I later found that it was one
of those AK radios (AK60?) mounted inside of a table.
At the same time there was another auction with exactly
the same thing. Someone had bid about $280 on it but didn't
meet the reserve. I suspect that she would have been happy
to get the $280 but then would you bid on an item that
was only described as a old table radio for $300?
I was curious so I queried her about it or I'd never
have given it much more thought. It was in Florida
and too hard to ship for me.

I don't know if its the case in this example, but you often see people basically placing an 'ad' on ebay just to attract interested parties. The transaction gets made privately. The ebay brass obviously frown on that, but if you've seen their Real Estate listings, they obviously don't frown too much.
The comments made about letting your possible survivors know some details about that 'room full of old radio stuff' is a very good idea. It was discussed on one of the other groups just recently. Whether you'd like to see it all sold for top dollar, given to charity or simply placed out on the curb you oughta let somebody know...better still if its formalized in a will so that the family vultures don't go loco and create even more problems. Most of us radio nuts tend to have a packrat side and not leaving the family to blindly sort it all out is the proper thing to do.

Hey Cal, the marks you are referring to are part of the old "Conelrad" alert system, which was in use during the late '50's and early '60s. The theory behind its formation was that the enemy could be guided to their target by the radio signals put out by the many broadcast stations. If war was imminent, then all broadcast stations were taken off the air, and two Conelrad stations, then, would be broadcasting news and information within minutes. Their frequencies correspond to the two "CD" emblems you have noticed on your receiver, one at .640Mc and one at 1240Mc. This system was supplanted by the "Emergency Broadcast System" in the middle '60's, which was put out of business by the present "Emergency Alert System". When you look at the "CD" emblems on your radio, you are looking at the cold war during its height! ":-))

The items that always seem the worst are towers and QSL cards.

It's hard to explain the 20 year old prized tower that cost several $K to put in will now probably cost money to have taken away. And of course "These cards were his most prized possession, they must be worth a fortune."

It's always tough. My wife is fluent in eBay. She know to describe and picture it all well and start he bidding for each item at $1.00. The market will do the rest.

That may be the scammer firm who was unmasked several months ago as a "repair" facility which took rigs to repair then gave "estimates" higher than the considerable worth of the rigs, then kept them for "estimate fees unpaid", or some such reason. They then put them on the market, after doing the repairs, at highly inflated prices. I'd proceed with caution in case it's the same "firm".

Hi,
I am looking to buy a later Racal RA-117 receiver. It needs to be unmodified
and in
excellent condition, both electrically and cosmetically. I am looking for a
rack mounting version without the desktop cabinet. I am (needless to say)
quite happy to pay freight costs to New Zealand and indeed could arrange
shipping from here.
I wonder whats is out there.
Thanks

If it's the firm at http://myvintageradios.com/ they have a number of
testimonial letters that are written in the same style -- with many exclamation
points. Might be a good idea to check some of the writers to see if they're
legit letters.

Ameritron AL-811 & Spare Set of Tubes
This unit is just over a year old and in clean and perfect condition, no scratches dings or rubs. This unit has never failed or been serviced. It has been a non-smoking environment and ran conservatively (its rated at 600 watts and I ran it at 500). It has 10 meters enabled (just a wire cut on this model). It is wired for 110v and can easily be changed to 220v if that is your preference. The tubes are in perfect shape/full output. The price includes a spare set of new 811's. The original box and manual are included. If you like mint gear you will not be disappointed. Price $500 Oh, reason for selling: New Alpha finally arrived : -)

I would like to find a Collins cabinet for either a 51S1, KWM2, or 30L1.

Trim ring not necessary. Will buy or trade.

Have a hard to find 17" deep cabinet suitable for a SP 600 that I would trade only towards the cabinet I need. I also have a Collins rackmount for a 51S1 for possible trade as well as several other cabinets of different types.

Please Email direct if you have one you'd like to part with.

Thanks for the read!

>for 5100 beans

Yep, the AT-1 went for that. It is truly amazing that one could have survived unassembled and unopened all these years.

The label I saw said 1957, which made it one of the very last AT-1s made. For $5100 one could have all of the nonstock parts custom made!

The problem is - what does one DO with it? Will the buyer build it, or leave it untouched for future generations?

What amazes me the most is this: The AT-1 was an awful transmitter. The design was simply poor. I remember a QST article by W1ICP where
the problems of the rig were fixed, and the result was a decent rig.

The DX-20, which replaced the AT-1, was infinitely better. It cost $6 more.

Message-ID: <9o2u4mrfb1@nereid.worldonline.nl>
Source record: 49618

Hello,

'm sorry for the worse English language but:
We have some Telefunken receivers for the frequency 0,10 Kc to 30 Mc. Thius receivers have three units; one receiver 19 inch, one display (working like a scoop, has a x-, y- and z-input and on the display you can see the frequency and the direction in degrees and and by a goos signal a oval that gives the direction), One unit to use the receiver and little units like one keyboard like a telephone-keyboard for the frequency, and some pedals. It is a receiver from 1985 and uses by some deparments in the Netherlands like the army, Radio Control Department and some coast-stations. Is is a microprossed receiver. With a tuning knob you can make pieces of 10 cycles, 100 Cyles or 1 Kc. THe modes are A1, F1/F4/F6, F3, A2 small, A2 bigger than small (what is the word for it), USB, LSB. Selectivity 0,1-03,-0,6-1,5-3-6-10 Kc. The unit for use the receiver has the tuning knob, a dispaly for tuning (uses a led-bar) for RTTY, 30 memory-places, and some switches for squelch, changes between degrees and frequency and so one. Stability less than 1 Hz. I can tell more about this receiver but if somebody is intresting in it we can send some pictures and give more information. The price is 1050 British Pounds, 1575 American Dollar or 3350 DM. Prices without shipping. We send the receives in the original wooden boxes. By the receivers are documentation in the Dutch and German language.

F r Deutsche Leute, mein Deutsche sprache ist nicht mehr so gut, weil Ich 25 Jahre zur ck Deutsch gelernet habe auf meine Schule. Aber when mann geinteresiert sind konnte kann ich mehr information in Deutsch geben. We sind auch in Meppel auf the radio-flomarkt auf 22 september.

This might be of use in detecting conventional portable radios,
but cell phones don't transmit unless they are in range of a site.
In that case, you need to find the source before the battery dies
or the survivor hangs up. This would have to be an on scene
activity.

I hear there have been several hoax calls though...

E. F. Johnson Matchstick multi-band vertical antenna switch/control box.
Complete with knob, even has S/N tag on bottom. Good shape, lettering is good.
This is a rare Johnson item. $30.00, plus a little for shipping. Please
reply by private e-mail. Thanks.

Before it goes to eBay

Drake TR-4 Transceiver (with original manual)
Drake RV-4 Remote VFO for TR-4 line
Drake SP-4 Speaker
Drake AC-4 AC Power Supply
Drake DC-3 DC Power Supply

Spare set of final/driver tubes for transceiver
Working station in good condition

Sold as-is due to age

$325, a great deal on a work horse of a station

DISPATCH Monthly Magazine News Hound

---------The Federal Emergency Management Agency
(FEMA) has established a
Wireless Emergency Response Team to coordinate reports that persons
inside the World Trade Center rubble might be calling loved ones on
their wireless phones. They've established a toll-free number for the
public--or public safety agencies, for that matter-- to call if they
receive such a call: (877) 348-8579.

According to FEMA, "The call center will record information from
members of the public who have either received contact via an
electronic device by a potential trapped survivor, or are aware of
any electronic devices associated with a missing person at WTC."

The agency added, "Based on sophisticated monitoring of cellular
network activity, the team has been able to determine that numerous
reports could not possibly be from the Ground Zero site, and have
thus helped avoiding putting rescue workers at risk."

The WERT team consists of cellular and pager experts from AT&T,
Lucent, Verizon, Sprint, Nextel, Voicestream, Motorola, Telcordia
Technologies, Ericsson, Nortel, CTIA, PCIA, SkyTEL and others, and
has been operating since the first day of the terrorist incidents.

2235. TS-520S gone wonkey!!! HELP!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-17 04:01:41 UTC
From: Michael Moreland - KD5BBC <kd5bbc@swbell.net>
Message-ID: <FAep7.3034$k_7.1057947813@newssvr30.news.prodigy.com>
Source record: 49629

I've got an old TS-520S that I bought a couple of years ago and it worked great until a few months ago. I thought I had just blown a tube - and perhaps a dirty relay somewhere according to the guy at Aavids in Dallas, but after playing with it last night I think it appears to be something more. Here's my problem(s):

First - My problems started out when I tried to answer a call to me one afternoon and realized that my 10m SSB signal was suddenly going out as "spread spectrum" - according to my DG-5, and the guy I was answering, my TX was jumping all over the place! I tried a couple of times - humm ... strange. I flipped on the VFO-520 just for grins and it worked fine, so I figured when summer rolled around I would try to find someone to help me figure out what was wrong and get it repaired.

Then, a couple of months later, the thing we all fear happened - I flipped on the rig, went to get a cup of java to let the tubes warm up, and when I came back in the room about 10 minutes later there was someone (a new asian DXCC for me) calling CQ at S8 right on the freq I had last used the previous night. I listened and nobody was answering so I grabbed the mic and with great expectations I hit the PTT and sent my call ... well, I screamed my call into the mic in my little room ... but I didn't send out any RF ... I heard a relay click but nothing else happened! I quickly checked everything and everything was right where it should be ... so I tuned down 20 kc right quick, flipped over to the dummy load, and started going thru the tune-up process ... NO DRIVE! Darn ... must have blown a tube! Well, I was dead in the water and all I could do was go SWL as he popped up on the DX packet cluster and a few zillion W6 and W7 stations created a pileup on the one I could have had totally in the clear first.

I found a source for new tubes and ordered them (2 sets so I would have a spare) but didn't get around to doing anything with them until last night because I had a friend that had a friend that was going to show me how to neutralize them - well let's just say that I gave up on "the friend" after 4 months and decided to tackle it myself. I started with the technique my dad taught me years ago - turn it on and see which tube doesn't glow. Humm ... 3 tubes and they ALL glowed! What the? So I started playing around and checking other things. This is what I've discovered:

(1) The VFO in the TS-520S is not stable - it was first unstable on TX and now that I have been using it for SWL I have noticed the RX is not stable, either. No, it's not "drift", the freq "jumps" around - not as great on RX as it was on TX, but it seems to have a mind of it's own. If I flip over to the remote VFO (VFO-520) RX works rock solid just as TX did before it decided to quit pumping RF into the ether.

(2) I don't have antennas for every band (actually just an indoor 10m dipole at the moment) so I don't know how it would work on every band - HOWEVER - I did play with it and discovered that on 10m & 160m there is no drive, but on 15/20/40/80 meters there IS drive. Plate current is right on spec at 60 ma.

Anyone got any ideas on where I might begin to try to fix this myself -or- know of a repuitable person who might be able to fix this thing for me? You can email me at my call at ARRL.NET

Thanks!

Michael - KD5BBC

All of the above symptoms maybe could be resolved with a can of good
contact cleaner. I'm a fan of Caig De-oxit. Be sure to clean the
moving contacts on the variable caps too.

> what memories?

I think that explains the discrepency about the date. I'm thinking the article was in QST in 1974, but most definitely the Accu-Keyer was not in there in the early eighties. The original, of course, had no memory (unless you're counting the dot-dash memory), and was just a keyer, albeit somewhat fancier than what had come before. I just checked, and it's in the 1975 edition of the ARRL Handbook, so it would have been in QST before that.

It was a popular keyer, and there were followups that added to the original. The Accu-Memory was circuitry that was added to the original keyer, and did add memory. That's in the 1979 edition of the Handbook (my handbooks are more accessible than thumbing through back issues of magazines).

One used to be able to get back issues from the ARRl for a nominal cost, and if the issue wasn't available, get a photocopy of a specific article for a small fee. I don't know if that has changed in this day of members-only websites and QST on CDROM. The CDROM is a way of getting the article, and plenty of other interesting articles, in this day.

To have a tower removed (if it's of a good size) will probably cost as much as the original tower and installation.
I have a 97 foot 45G which sets in roughly a yard and a half of concrete. Each guy anchor sets in over two yards (15,000#) of concrete.

It would require a crane (with the extended boom) to take the tower down (without the boom I can get one for a little over $100/hr) Digging out and moving three 15,000# blocks of concrete would not only be expensive, but most of the yard would have to be redone.

Even though it's basically a new tower, it would cost at least what the tower is worth to take it down.

There was a beautiful, self supporting tower in Ithica Michigan (made the cover of QST) back around 81. This thing was a well engineered monster that topped out at roughly 180 feet (give or take a bit). As I recall each leg was set in huge concrete piers. The tower was large enough I was able to park my car unside the base. The rotor which mounted at 80 feet weighed something like one ton. There was a tower that set down inside the support structure which had a thrust bearing at 120 feet (give or take a bit) so every thing above 120 rotated. It didn't even shake in 70 MPH winds.

Said ham passed away. They tried to sell the tower for a relatively low price on e-bay, but no takers. Fortunately the local power company had a crew volunteer to come in and take the tower down. I know he had three semi loads of structural steel and over $30,000 into the tower. That's not counting anything for the two years of construction.

I would have loved to have had that tower, BUT...I would have had to hire it taken down, transported, and erected and that would have been expensive (even if it was only 30 miles from here). Then there is the little problem that my lot is 200 X 200 feet. I would have needed a lot that was 400 X 400 before I could have had the thing erected.

For what it would have cost to get that tower, I could probably have purchased one of the self supporting cell towers and had it installed. Then again, in addition to not having enough land, I seriously doubt I could have afforded it, even if the tower was available for free.

Although my wife is a ham (general class) and has been for years, she doesn't have any interest in HF. If I bought the farm, I don't know if she'd have any interest in keeping anything except her mobile rig. I'm certain she'd not have any interest in those big boat anchors out in the shop (those are worth selling on e-bay). The rest gets donated to the local club (501C3 status) so she can deduct the value as a charatible deduction and they can do with the equipment as they wish.

If you end up shipping it to someone, remember to remove the transformer and
ship it sperately if they need it.

2250. FS Vintage Ham Gear

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-17 18:50:57 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <lCrp7.14121$lE3.1622922@newsread2.prod.itd.earthlink.net>
Source record: 49642

I have the fellowing Vintage Radio items FS:
1.B&W Model 426 1KW Low Pass Filter for 1.5 to 30 Mhz, Price $25 shipped;
2.Voice Keyer, Type VOK 10 M1-22-80-11, Vector 1950. I don't know much about this
except that it appears to be an old VOX unit for a 1950/60s transmitter. It has an 8 pin male socket
on the bottom of a small red box and on top it has a 6U8A tube and a
Release Time Control Pot.
Price is $12.50 shipped;
3.Heathkit Original Mic for the Heathkit Lunch Boxes, Tower, Sixer, etc. It is in nice shape with original cord
and Mic Connector. Price is $20 plus shipping;
4.Heathkit Original 40 Page Manual for the Heathkit Sixer Lunch Box, Model HW-29A. It is in very nice shape
and it is complete with all construction diagrams, instructions, and
schematics. Price is $15 plus shipping;
5.DowKey T/R Switch Model DKC-TRM-1. This is the one with the 6EH5 Tube. The unit operates on
-135 Volts DC and 6.3 VAC. It is in very nice shape. Price is $25 plus shipping;
6.Heathkit "Sixer" Model HW-29A, Lunch Box. This transceiver looks like it was made yesterday, almost new,
but it has some mods. It has a phono plug for an out board speaker right under 'The Sixer" label on the front panel. Also, there are 4 small holes on the top of the cabinet and no handle. There are also a couple of small holes toward the bottom lower edges of the front panel. Other than that is looks very nice. It is untested. I do not have a crystal to try it out. Price is $25 plus shipping.
Thanks, Charlie Hugg, K5MBX

From: Jack Berry <jackberry@ameritech.net>
Message-ID: <3BA69AE3.2CB5769F@ameritech.net>
Source record: 49549

Hello to the group:
I just started working on this National 2-40D that I picked up awhile back. I've checked the tubes and wiring so far. On looking at the schematic and at the back of the radio, it appears there should be a "dummy plug" that inserts into this 7 pin plug on the back of the receiver next to the speaker plug. The radio is missing it. It appears that pins 3 and 4 should have a jumper shorting them together and also pins 1 and 7 the same. I have traced the wiring to the plug and marked what I determined to be pins 1 through 7 on this. Or if someone has a picture of what are what pins on this plug from outside or inside of cabinet? I wondered if this is also what any of you other owners might show also, or actually have on your receiver. I just wanted to check before jerry rigging it and plugging her in....

Thanks Jack, N9JB

No mike - but thanks anyway! That diagram is for the dial pointers for both
main and bandspread dials. I need to restring that bandspread tuning dial,
which is a separate string. It looks like it just winds several times
around the bandspread flywheel shaft.
Thanks for trying.

Source record: 49553

Hi,
Selling a nice Gonset GSB100, SSB,CW, and AM transmitter. New Peter Dahl power transformer, filter capacitors. We all know how these have problems with the power transformers. The rectifiers have been replaced. (5U4) New driver and final tubes. Several capacitors and resistors have been replaced as needed. Front panel is very good, all lettering great. Tested on 75 and 40. Now the bad part. The string for the band selector slips, causing the drum to be off a little. Will need to be replaced. Also, it needs a 9006 tube in the "Relative RF" output meter circuit. Asking $425.00 plus shipping from Arkansas. Includes a W7FG manual. Also included, is a small card, indicating that this was number 29 of 250 made in this particular run from Gonset. There are quality control stamps and names on the tag. Pictures available to serious folks. I have a nice double box to ship to your QTH safely. Please reply to me direct, as I sometimes miss reading the list for a few days at a time. I can be reached during the day at 1-501-394-5589.

Thanks
Mike-K5VSE

John

Word around VK land is that these meters have failed on a large
portion of these testers offered for sale and that replacement meters
are impossible to find. Junker units have failed meters!

I am buying one in working order and have been advised to fit reversed
diodes across the meter to protect it (I think meters are 30 amp with
3200 ohm resistance, so calculation suggests Schottky diodes which
conduct at 0.2v). Not sure how hard they are to work on.

Any idea how yours went bad - overload or just "age"?

Sorry to be so discouraging but it might be possible to use a more
readily available meter (say 1 ma) with a small amplifier - has anyone
tried this?

Simon

PS My email address works as is.

I am selling my Ten-Tec Omni V station. Consists on the Ten-Tec Omni V model 562, matching speaker/power supply console model 961, desk mic model 705, and remote tuning knob model 301. Every filter slot is filled. Includes the standard 2.4kHz filter, as well as optional model 288 1.8kHz, model 285 .5kHz, and model 282 .25kHz, as well as model 219 .25kHz filter installed in the 9mHz IF. Built in noise blanker and speech processor.
The receiver section of the Omni V is considered by many to be the best receiver Ten-Tec has ever offered. Just back in May from Ten-Tec for an alignment and replacement of internal battery, as well as a complete check up. Includes the original manual, and original cartons. In excellent condition. Price for all: $1200.

2282. Reduction drive

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-19 00:59:00 UTC
From: Bob Liesenfeld <wb0poq@visi.com>
Message-ID: <3BA7EDD4.EB057CAD@visi.com>
Source record: 49576

Hi gang,
I have an old rx that uses a reduction drive on the main tuning cap.
I believe it is one of the old Jackson Bros type drives. It has an
input shaft sticking out one end, with the output shaft coaxial with it
sticking out the other. The mounting is an elliptical shaped plate with
2 mounting holes. (Hope this description makes sense).

Anyway, there is a fair amount of slop in the action. There is no
movement of the output shaft until the input side has gone through a
couple of degrees or so. Then, if the direction is reversed, again
there is no output shaft movement for several degrees of rotation.

My question is, before I tear this thing apart, does anyone have any
ideas or pointers as to a fix?

Tnx es 72

>
From your description it sounds like the typical ball bearing type drive
common on many radios from the 30s onwards, both amateur and consumer.
If so, they come apart for cleaning quite easily. The first effort
though, might be to just hose and flush it with copious amounts of WD-40
(or your favorite substance if you are allergic to WD-40). That will
loosen the hardened grease inside and may restore it to proper working
cndx.
What kind of radio is it on?
-Bill

I am posting this for a buddy of mine (John KF6QMV). You need to contact him at (530) 604-6656. These are for pick up only in Redding,Ca. or he will meet within 200 mi. of Redding.

32V1 transmitter in very good cond. Works perfect.

75A2 rcvr. Highly moded....looks like factory prototype???? Has AM-SSB-CW filters (xtal type),homebrew 100kc. calibrator, Swan type tuning knob,etc. In very good shape.

He wants $800.00 for the pair or might trade for a ex.cond. HF amp.....L4B,LK-500, AL-80,etc. NO Heathkits though.

Again....CONTACT JOHN......NOT ME.

Source record: 49584

Jack,

You are correct. Pins 1&7 and 3&4 are shorted.

If you don't have the speaker, you will also need a 8 ohm to 20K matching xfmr with a center tap to adapt a regular 8 ohm speaker, as you will be matching push/pull.
Try a universal transformer. AES has several.

I have a NC-200 and just sold my 2-40 D. (trucked the 2-40D from Seattle all the way to Montana and forgot that very plug in my office. Took it out so it wouldn't get lost =)

They are great radios. For SWL listening, I actually prefer this type of tuning to the pulling in/out of all the coils of my HRO50T1. But, relatively speaking, nothing can go wrong with changing coils but there ARE a lot of mechanics to the 2-40D (catacomb) tuning system. Having said that, my primary BA station rcvr is the HRO50T1. It has a higher "cool factor" IMHO.

Although come to think of it, you could certainly misplace a coil...

If you have any questions, I'll try and help. I've done several of the catacomb types.

John - WB0RLD

Sorry I can't help at the moment (my SX-28s are under some stuff int he garage), but a couple of interesting points:

(1) Watch out you don't get it backwards. I once had an SX-25 whose BS dial worked great -- only it ran backwards!

(2) Some models of SX-28 -- I'd guess early ones -- used gear drive on both BS and main tuning. I have a "parts" set like this. It also has Hammarlund-grade mini air variable caps for trimmers on the coils, not the cheaper mica ones.

For some reason the previous owner swiped the power trans from this set to repair a later, cheaper version (not an -A). Not clear why he didn't go the other way.

I took mine apart long ago (no longer own the radio), and no, there are no
spring-loaded guts to fly all over the room. Just take it apart, clean
everything, lube with heavy oil, and follow your feel and best instincts to put
it back together to run smooth as silk. You will have to do it a few times
until you're satisfied. But there's nothing to really screw up.

Any parts you lose (and there aren't that many, it's pretty simple) are your
own fault :-) 73, Mike K. AA1UK

A birdwatt?

Once again, CBers have defied the known laws of physics.

Bill, W7TI

Message 3:----------

A bird watt is a unit of power. It is measured with a bird of a
certain type and representative impedance (one of several "Standard
Loading Birds" perched on a voltage node on the antenna.

One bird watt is enough to make a sparrow ("Standard Loading Bird no.
1") jump suddenly off the tip of an antenna upon keydown.

Ten bird watts is enough to make it fly off rapidly and make funny
screeching noises.

100 bird watts will freeze a #1 Standard Bird to the antenna
by muscle lock and cause it to die by fry.

1000 bird watts is enough to cause a medium sized crow ("Standard
Loading Bird #2") to catch fire in thirty seconds.

10,000 bird watts is enough to cause a bald eagle or osprey
(Standard Loading Birds #3 and #3A, respectively) to explode
instantly upon keydown. This is also the level at which the radio

operator's voice can be heard coming from your refrigerator.

That's what bird watts are all about. :)

CJ

Message 4:----------

On Wed, 05 Sep 2001 00:12:32 GMT, Chris Johnson <cmjohnson@cfl.rr.com>
wrote:

>That's what bird watts are all about. :)

The first CB stuff that ever made sense. Thanks!

Bill, W7TI

Message5:----------

I live near the ocean. Do you have the conversion for sea gulls??

I am trying to figure out how much power I am running. If I key up
with a small flock near by, they will all drop the French fries they are
carrying?

Thanks,
Bill

Message6:----------

That level should be about 500 bird watts.

Seagulls have non-standard loads and are highly inductive. As a result,
they heat up more per watt than other birds of comparable
size. Generally, a seagull has a birdwatt loading factor
of 0.5, referenced to a common crow.

Two gulls in series equals one crow.

Be warned, when the radiated field gets high enough, the
entire flock will spontaneously evacuate its bowels
in mid-flight, and probably will do it right over your
most expensive/most recently washed car.

Yea, off topic post but it makes you wonder....

NCCI pulls workers' flags

By Phil Galewitz, Palm Beach Post Staff Writer
Saturday, September 15, 2001

On a day of national mourning and prayer, a Boca Raton company had its managers confiscate some American flags from employees' cubicles, saying other workers might find them offensive.

NCCI Holdings Inc., a company that compiles workers compensation insurance data, told its 850 Boca Raton employees that displays of nationalism had no place in the office.

"Divisive statements or actions, political or religious discussions and anything else that could be divisive or mean different things to different people are not appropriate in our work environment," Chief Executive Officer Bill Schrempf said Friday in a memo to employees.

Several employees complained about the flag prohibition. One employee said she was suspended and told to go home Friday morning when she refused to remove a small flag from her desk. The company refused to confirm whether it had asked any employees to leave.

"It just boggles my mind that here in America or anywhere in America, one would be restricted from displaying it," one employee wrote in an e-mail to Schrempf that also was sent to The Palm Beach Post. "Too many people these days, including yourself, it seems, seem to forget what the flag symbolizes and that many men and women served to defend that flag. I think you should show a little more respect."

NCCI spokesman Michael Bullard said the company has a long-standing policy of prohibiting employees from bringing political or religious symbols into the workplace.

When, Oh WHEN is an American company manager going to get a backbone,
walk up to those people who claim to be "offended" and say:

"I and my company are not responsible
for your need to find something about which to be offended.
Get over it. "

While this is true I also heard that on Monday they, the company, had small flags for each employee at the doors when they got to work. I assume the bad press had some impact. IT SHOULD!

2316. Heathkit Crystal Dilemma

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-20 13:23:08 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <3BA9EDBC.C47620FC@ix.netcom.com>
Source record: 49509

Problem: A friend asked me to
look at a Heathkit 401 transmitter.
After cleaning the band switches, tube sockets and
other contacts and giving it a touch-up alignment,
it works OK on 40 and 20.
Inactive crystals have knocked out the other bands.

The thing is full of low-rent JAN rocks (ick).
They seem either inactive or yards off freq.
Problem is, a new set of decent crystals costs more
then the whole radio is worth.
Anyone know a crystal place that's more affordable
then International, or perhaps have other suggestions?

Alternately- do these things have a history of
component drift in the xtal Osc. stage?
That might make the less active xtals inop.
I haven't tested it that closely yet,
'specially since I don't have a manual.

Thanks,
Dave S.

p.s. Has anyone ever redone the lettering on the front panel
of one of these things? Were I Heathkit, I'd have been
ashamed to put my name on something silkscreened in
such a sloppy manner. It's pathetic.

Also in Boca Raton an Elementary art teacher was suspended for letting the kids in second grade draw pictures and talk about the troubles.

This is one of the ways that kids this age get through problems in their lives.

The teacher said she was following directives from her principal to help the kids in school following last week.

Maybe it's all the warm weather.

Kevin

The are not the only one they crook Charles Dolan who made Billions in this country did also, he also is in his way to pulling off the biggest monopoly in history

New York's Cablevision Bans American Flag
While most Americans can't get enough of Old Glory in the wake of last week's terrorist attacks on the World Trade Center and Pentagon--and major cable news providers like Fox News and CNN display a graphic of the flag 24 hours a day--New York's Cablevision Corp., owner of Cable News Channel 12, has actually banned the American flag from news programming.

News 12 is broadcast over the Cablevision system, one of the countries largest, reaching 1.5 million homes through metropolitan New York, New Jersey and Connecticut.

Cablevision, headed by media mogul Charles Dolan, also owns The Wiz, Radio City Music Hall, Madison Square Garden, the Knicks and the Rangers, and cable channel American Movie Classics -- among its many media and entertainment properties.

"Our office is a newsroom and news people are committed to supplying objective information on events here and around the world," wrote Pat Dolan, News 12 news director, in a memo banning on-air-flag displays distributed to employees Sunday.

Long Island's Newsday reported the story in editions today.

Dolan became concerned when American flags began popping up in his newsroom and -- horrors -- even on the lapels of some of his anchors. Meanwhile all the other networks, both broadcast and cable, drench themselves in red, white and blue.

"We have to avoid giving a false impression that we lean one way or the other," said the news director. Dolan is apparently trying to strike a balance between his fellow Americans and the terrorists who have vowed to kill them.

In an interview with Long Island's Newsday, which reported News 12's flag ban in print editions only, Dolan admitted the move has angered some of his employees.

"We've had a few heated discussions."

But he stuck to his guns. "What we're trying to do is make clear that our guys can express their patriotism, but we don't want the flag to be associated with their daily activities as electronic journalists."

Dolan called the on-air flag waving "a real problem when war breaks out," explaining that he doesn't want his viewers to get the impression that "we may subtly endorse what the government is doing."

To share your views on News 12's American flag ban, call Cablevision headquarters at (516) 803-2300.

For both policial and religious items, the Federal Circuit Courts have
already ruled any such restriction to be unlawful. Don't hesitate to
repectfully but uncompromisingly educate your employer, as many have
been misinformed or brainwashed by media garbage, abd believe ther
policies are rightful. (ref: Chapel Hill, et.al.)

To add:
This SOB has me REALLY steamed I almost got arrested because of him.

His cable company has the highest rates in the country.
1 day after the WTC murders we lost all rooftop antenna reception, this SOB prick sent a "goon squad" ringing doorbells selling Opt Cable and Cable/Opt-Online packages.
Exact words from salesman:
You bet have no TV huh....nuck nuck nuck.

I went ballistic and wanted beat the sh*t out of the guy.
I chased him of my property and hit my garbage can with my "Congo bar" the guy was running so fast he didnï¿½t didn't have time to get in his car and ran down the street banging on door's to call the cops
They come and want to arrest me, but it was OK..(I share blue friends that were killed in the WTC)
I live in the biggest Wall street town in New York.
Besides 4 friends gone, (100 total from the town) + 2 NYC EMS buddies went mental picking up "parts" at the WTC and were hospitalized.
Triple wakes every night, 7AM F-16 sonic boom this morning.
Now a lady (WTC widow) just jumped in front a Long Island RR train down the block and we dont know what widow it was.

Pig face's news crew's are looking for opinions, take in mind he made his kids and inlaws top brass in his monopoly
He has some balls to live here, make his money here, and deny the use of the American flag.
What is most disgusting is he is here in Long Island.
We told him to either support his country or get the hell out.

Hammer this F&*king jerk, folks! Overload his server and phone lines

re: "where can I find a rocker switch?"

Usually after they hit 40 years of age, they tend to slow down a bit...

:-)

Your Dentron rocker switch is pretty generic... Farnell which is the
parent company of Newark carries them.

cheers
skipp

I have for sale a HW-101, cabinet and front panel have no scratches. Receiver works great. Full output xmit (approx. 100w). Works on cw and ssb however the alc meter does not indicate properly. Manual included. $140 u pay shipping. Also have HP-23 power supply for $40 u pay shipping. Tnx for reading. Ed KC4FD

2337. For Sale: Original BA Manuals and Goodies

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-21 01:02:23 UTC
From: David Hollander <n7rk@dancris.com>
Message-ID: <3BAA91A0.FE86FC73@dancris.com>
Source record: 49531
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I have the following for sale. Click on the links to view pictures.

Shipping is extra on all

These are all original manuals- not copies!

Hallicrafters SX-115 Manual - excellent condition.......$60

Hallicrafters HT-40K Halli-kit operating and service manual - excellent condition.....$30

Heathkit HW-18-3 2 Channel SSB Transceiver Manual - excellent condition (no marks)......$30
(This is the 2 channel crystal controlled transceiver for 160 meters - I had one in the late 1960's)

Atlas 210X/215X Manual.....$30

2 - Swan 350 manuals - covers have marks on them but insides are excellent condition.....$30 each

Signal One Operating Manual - Original Signal One CX-7A Operating Manual. This manual contains the
operating instructions for CX7A transceiver. This copy is clean and in excellent shape.....$30

Hallicrafters CRX-2 High Band VHF FM Receiver.
This is a 10 tube receiver that covers 152 to 174 MHz built in 1962 and 1963. Includes a built-in speaker. The unit works and is in nice condition with some scratches. If you are a Hallicrafters collector this would make a nice addition to your collection. .....$45 + Shipping

http://www.dancris.com/~n7rk/hallicrx2.jpg

BUD Link Coupled Transmitter Coils
These coils cover 80-40-20 and 10 meters (their was no 15 meters than) and are either from the 1930's or 1940's. The set also includes the connector bar. Two of the coils have the ceramic bar cracked but can be glued back together. These would be ideal if you are building a 1930's or 1940's style transmitter in the several hundred watt power level.....$50+ shipping

http://www.dancris.com/~n7rk/budcoils.jpg

Emerson Model 704 Portable Tube Radio
This is a four tube battery operated radio from 1952. The case has many scratches and the metal handle is rusty. The inside is clean and shows

no signs of
battery acid damage. The radio is untested as I don't have the high voltage
batteries to test it. It my be hard to tell from the pictures but the
color is a dark forest
green.....$20+ shipping

http://www.dancris.com/~n7rk/emersonport.jpg

"Rare" Gonset 2 Meter VFO and Audio Pre-Amp
This unit matches the Gonset Gooney Bird. I have been a ham for 38 years
and I had never seen one of these units before. Cosmetically, the unit
looks very
good. I don't believe that the knobs are the original ones but it should not
be that difficult to find the correct knobs off of a junker Gooney Bird.
The unit is untested.....$100+shipping

http://www.dancris.com/~n7rk/gonsetvfo.jpg

Drake R-4A Receiver and MS-4 Speaker with the original manual. The radio
is in pristine condition and the speaker is also very clean. The copper
chassis is also like new and unpitted. The radio plays however the audio
is a bit distorted into the speaker but it sounds good into the
headphones. All other
functions work correctly. The receiver still has the factory tag on the
line cord.
The pictures do not do this receiver justice.....$300+shipping

http://www.dancris.com/~n7rk/drake6.jpg

http://www.dancris.com/~n7rk/drake13.jpg

>it works OK on 40 and 20.
>Inactive crystals have knocked out the other bands.
>
>The thing is full of low-rent JAN rocks (ick).
>They seem either inactive or yards off freq.
>Problem is, a new set of decent crystals costs more
>then the whole radio is worth.
>Anyone know a crystal place that's more affordable
>then International, or perhaps have other suggestions?
>
Two ideas:

1) Look around for a junker Heath rig that uses the same xtals. The SB-100,
SB-101, SB-102, SB-300, SB-301, HW-100 and HW-101 all use the same rocks. Some
other Heath units may use them, also.

2) I have a kit of the heterodyne crystals, unused in the original boxes,
(except for one of the 10 meter ones which is used). Offers?

T4XC, R4C, AC4/speaker, L4B amp all in excellent condition. Full output on almost new finals in the T4XC. The R4C has all filters plus the Sherwood cw filter cascaded. It has other Sherwood mods (audio, power supply, agc) and the noise blanker. The L4B has full output. I am in near San Diego in Del Mar and a strong preference will go to someone who can pick up the equipment - it is too nice to risk shipping.

$650 for theT4XC, R4C, AC4
$675 for the L4B

WOW an SB-101, that has the stable TRW built LMO ... Nice Radio !
You can go with real dial cord and springs or go to Home Depot and pick up 2 rubber O-Rings used in plumbing.
Check the 100K resistors and Meter zero pot below the S meter (they always go bad)

Gridleak wrote in message <2557-3BAB8E0E-55@storefull-113.iap.bryant.webtv.net>...

Don,
Your best bet would be to go to "Pep Boys" auto stores and try to match
them up with some of the O-Rings they carry in stock. It's the preferred method
of replacement for these. I've tried it and it works.
Good luck with your SB-101!

2355. value of RCA AR88 in UK vs US?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-21 23:45:00 UTC
From: Phil Nelson <philnelson@antiqueradio.org>
Message-ID: <sgQq7.63431$aW5.947283@dfw-read.news.verio.net>
Source record: 49449

I have been contacted by a party in the UK who has, among many other receivers, an RCA AR88 for sale. A local (well, at least located in UK) fellow has offered the seller about US$60 for the set, which strikes me as low. Let's assume the condition of this set is average or possibly better.

I have always considered this a desirable set, not unlike the Hallicrafters SX-28 because of the wartime history, etc. On the other hand, I gather that this model is more common in the UK than the US.

Would the fair value in the UK really be as low as US$60? If someone here in the US offered this set for that price, I'd buy as many as he could supply :-)

I am not looking to buy this person's radio, since shipping costs to the West Coast of the USA would exceed its value unless it has a solid gold front panel. Just trying to give fair (and free!) advice in the context of disposing of a relative's estate.

My 3 favorite 'wartime' receivers: the BC-779 Hammarlund Super Pro, the Hallicrafters SX-28 Super Skyrider, and the RCA AR-88. I already own the first two. Don't tempt me, Phil :)

Hi all, hope someone can help. I just acquired an old marine DF or RDF portable receiver. Mine is a Raytheon "RAY DF-20," but is a typical Japanese made unit of 1970's vintage sold under the Ray Jefferson and other brand names. Can receive and DF on three bands from .16 to 3.8 MHz, also receives a couple of VHF marine and weather channels. Has a large, rotatable ferrite bar antenna on top (with compass rose) and ONE telescoping "sense" antenna. I put 4 "D" cells in and she is a pretty hot LF receiver. Outside and at night, I got every broadcast station from halfway across the US from my home near Philly. Even WWV at 2.5 MHz came in strong (on the ferrite bar antenna!) Everything seems to work just fine.

I can't figure out how to DF with the thing! You spin the ferrite (directional) antenna, and you get TWO "peaks" and TWO "nulls" on the S meter. I tune for null, press the "sense" button and a strong signal will once again show on the meter (presumably off of the "sense" telescopic whip.) This must somehow show which side of the directional antenna the station is located, but I cant for the life of me figure out how.

The radio has a rudimentary BFO, RF gain control, "TUNE" position (receives well) and X1, X2 switch positions (receives nothing.) I can send you a digital pic of the panel if it would help with your explanation.

My thanks in advance for the help!

If replying to my e-mail address, please remove the word "SPAMFREE" to get through.

Joe,

I can't remember exactly how that one works, had one years ago. From what I can recall I think you first find the null on the loop, then put it in the tune position, hold the df button and reduce the rf gain to get a mid scale reading on the meter. You then rotate the loop slightly to either side of the null that you had. If the signal increases slightly when rotated clockwise you have the true direction null. If the signal decreases when rotating clockwise you have the 180 degree null. I may have the null rotation directions backwards, can't remember. Try it on some stations that you know the direction of.

Thanks for the feedback. I have attached the seller's complete list on the chance that someone might volunteer reasonable values. I will forward any feedback to the seller. The values for the first few items are taken from Fred Osterman's shortwave receiver guide. Again, this is a bereaved party in the UK wishing to dispose of the entire lot, so a reasonable estimate of the entire lot value would be useful.

Phil

I have the following for sale. Shipping is extra on all

Thes are all original manuals- not copies!

Hallicrafters SX-115 Manual - excellent condition.......$50

Hallicrafters HT-40K Halli-kit operating and service manual - excellent condition.....$30

Heathkit HW-18-3 2 Channel SSB Transceiver Manual - excellent condition (no marks)......$30
(This is the 2 channel crystal controlled transceiver for 160 meters - I had one in the late 1960's)

Atlas 210X/215X Manual.....$30

2 - Swan 350 manuals - covers have marks on them but insides are excellent condition.....$30 each

BUD Link Coupled Transmitter Coils
These coils cover 80-40-20 and 10 meters (their was no 15 meters than) and are either from the 1930's or 1940's. The set also includes the connector bar. Two of the coils have the ceramic bar cracked but can be glued back together. These would be ideal if you are building a 1930's or 1940's style transmitter in the several hundred watt power level.....$50+ shipping

http://www.dancris.com/~n7rk/budcoils.jpg

Drake R-4A Receiver and MS-4 Speaker with the original manual. The radio is in pristine condition and the speaker is also very clean. The copper chassis is also like new and unpitted. The radio plays however the audio is a
bit distorted into the speaker but it sounds good into the headphones. All other functions work correctly. The receiver still has the factory tag
on the line cord. The pictures do not do this receiver justice.....$300+shipping

Joseph

When the signal nuls, the ferite rod is pointing at the transmitter, but of course you dont know if its forewards or backwards.

Then turn the radio 90 degrees from nul to where the signal is a max.

You now have two maxima.

Now switch in the sense. One of the maxima will be stronger than the other. That gives you the forewards or backwards.

In effect the sense aerial plus the rod aerial produce a sort of cardiod pattern, like a simple vhf beam.

The nuls with the sense off are much more accurate,than the cardioid with the sense on. So you find the nuls first and the use the sense to tell which way.

Graham

4 SALE LOTS AND LOTS OF COLLINS EQUIPMENT.....

1. COLLINS LATE MODEL "round emblem" 51S-1 RECEIVER
$1900.00.....NICE.....

2. COLLINS 75S-3C WINGED EMBLEM RECEIVER
COLLINS 32S-3 WINGED EMBLEM TRANSMITTER
COLLINS 516F-2 POWER SUPPLY.....$2500.00

3. COLLINS 75S-3B WINGED EMBLEM RECEIVER
COLLINS 32S-3 WINGED EMBLEM TRANSMITTER
COLLINS 516F-2 WINGED POWER SUPPLY.....$1700.00

4. COLLINS 30L-1 WINGED AMPLIFIER.....$600.00

5. COLLINS "BRAND NEW" 351D-2 KWM-2 MOBILE MOUNTING BRACKET,
CABLES
INCLUDED ...NEVER USED!!!!!!!!.....$250.00

6. COLLINS PM-2 POWER SUPPLY $275.00

7. Collins KWM-1 transceiver, Collins matching 516F-1 AC power
supply,
Collins 516E-1 12 volt supply, and Collins 351D-1 mounting
bracket for the
KWM-1, Astastic hand microphone, Collins 189A-1 phone patch
and
original
manual ....$1875.00 checked out by Wayne Spring W6IRD

8. Collins 270G-2 external Speaker $299.00

9. Collins 270G-2 external Speaker $299.00

10. Collins 75A-3 in very nice condition, the outside case was
repainted
with a slight darker krinkle black color professionally
done by a
painter
that does military equipment, included accessories as
follows:

Collins 8R-1 100 KHz crystal calibrator
Collins 148C-1 NBFM adaptor>
Collins F-455-B-60 6.0 Kc A.M. filter
Collins F-455-B-31 3.1 Kc filter
Original Instruction Manual.....$1150.00

11. Collins KWM-2A "round emblem" transceiver
Collins 516F-2 winged emblem power
supply.....$2000.00

12. Collins 75S-3 winged emblem receiver $575.00

13. Collins 312B-4 winged emblem $275.00

14. Collins KWM-2 winged emblem
Collins PM-2 power supply $800.00

15. Collins KWM-2 winged emblem transceiver with factory
installed
Collins 136B-2 noise blanker, and Collins PM-2
power supply, slide guide for the piggy back power supply
with
tightening screws. A few added hole in the back of the
case, with Turner hand microphone included.....$995.00

16. Collins 75A-4 receiver with optional 6.0 KHz AM
filter.....$900.00

17. Collins 270G-2 external speaker $299.00

18. Collins 312B-1 external speaker for a Collins KWM-1 with a
small
hole in the case $299.00

19. Collins 399C-1 "Very Rare" external VFO for a KWM-2, or
KWM-2A a
few holes in the case on 1 inch one in the bottom
of the case $950.00

20. Collins 312B-4 round emblem parts unit "not working"
complete, mod
on front, and back. Meter, and coupler
not working $150.00

21. Collins CP-1 Crystal Pack without GRAY CASE $150.00

22. Collins MP-1 parts rig not working $30.00

Thank You & 73,

Leo KJ6HI

2376. Heathkit "Sixer" Lunchbox FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-23 00:18:10 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <6T9r7.7380$W83.691497@newsread2.prod.itd.earthlink.net>
Source record: 49470

Heathkit "Sixer" Model HW-29A, Lunch Box. This transceiver looks like it was made yesterday, almost new, but it has some mods. It has a phono plug for an out board speaker right
under 'The Sixer" label on the front panel. Also, there are 4 small holes on the top of the cabinet and no handle. There are also a couple of small holes toward the bottom lower edges of the front panel. Other than that is looks very nice. It is untested. I do not have a crystal to try it out. Price is $25 plus shipping.
Thanks, Charlie Hugg, K5MBX

2377. 6 foot antique kw boatanchor

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-23 00:57:51 UTC
From: Lamb <k7fm@teleport.com>
Message-ID: <Udar7.6666$rB6.511781@nntp3.onemain.com>
Source record: 49471

From Estate:

Located In Portland, Oregon. 6 foot tall rack full of heavy stuff - including an amplifier using push-pull 250-TL final tubes. With set of plug in coils accessed through front door (NOT UL APPROVED) Complete with spare Eimac 250-TL. Large tuning capacitor. Complete with large power supply. Probably was an old am transmitter at one time, but I did not see modulator deck. Has 4 872 tubes in power supply. May have been driven by DX-100 with SB-10.

Heavy - Heavy - Heavy. Probably good for parts to build your own kw am rig using these wonderful old tubes. Many meters on panesl plus about 10 extra meters and numerous plug in coils of various sizes.

You haul from Portland. If no takers for complete unit, will part out, but parts total will be more than the entire unit.

Price is $100, but might be negotiable. I know details, but you can get a .jpg from w7msp@engineer.com This is the amplifier of W7DSP. His neighbor (a non-ham) is handling all of the sales but knows no technical details. He set up w7dsp@engineer.com just for the sale of various items. He is next door and can send photos.

I am a ham and looked at item and am helping with the technical stuff. It is not pretty, but well built and has most of the stuff for a great am kw.

And, remember to watch that trap door for the plug in final coil.

73, Colin K7FM

2380. FT: 51J-4 for ICOM 746

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-23 02:30:14 UTC
From: TooManyTubes <kb8tl@yahoo.com>
Message-ID: <tqqiafbdohdmb0@corp.supernews.com>
Source record: 49474

Have: nice Collins 51J-4 that I'd like to trade for a ICOM IC-746. Price wise, they are running about the same these days on ebay with the ICOM depreciating and the 51J-4 appreciating. My radio is, except for a reversible product detector mod and some hammertone gray paint on the side panels, stock. No holes drilled in it except at the Collins factory. It is missing the 800 Hz filter and the hold down clamp for the filter cap but is otherwise all there including top and bottom covers. It was rack mounted so it has no cabinet. Also equipped with a non stock tuning knob but I've got a line on a real one. Works good on all bands and is very clean inside. So, if you are interested, email me. I am in southeastern Michigan.

Hello,

PC 900 is a B7G base triode with a heater of 3.9V 0.3A, Va is 135V
Vg -1V Ia=11mA Wa 2.2W Ik=20mA max, u=76 and the gm is 14.5mA/V
A very promising valve to experiment with in low-level stages, both
audio and HF/VHF amplification. It was developed for use in VHF and
UHF television tuners.
I have 400 pcs in stock and the price is only $ 3.00 each or $ 1.50
each if you buy 100 pcs or more. The valves are NOS, in mint
condition, original boxes and the label is Haltron, but they are
rebranded, and I think the are originally made by Philips or Siemens.
E-mail me if interested.

Best regards,

Arnold Goksyr

Gents, thanks for your replies....MUCH appreciated. Here's what I found, using an amalgam of your suggestions.....:

I tuned a strong station of known direction in which the SENSE button gave a appreciable RISE in signal strenth on one of the NULLS.

ONE NULL produces a RISE in signal in one direction and a DIP in the other direction (as ferrite antenna is moved slightly.) The DIP is the direction of the station. Turn ferrite antenna to THAT NULL (is quite precise,) and read the bearing to the station (as compass rose is oriented to magnetic heading.)

I am going to get out my compass and try to triangulate my position (from the back yard) off of two or three stations. If I can do this sucessfully, perhaps this receiver may have a place aboard the sailboat as something more than a toy.

I'll tell you, this thing is indeed a HOT LF receiver. I can pick up and identify a aviation NDB at 220 kHz thats more that 50 NM from my house, from INSIDE! I believe that these are fairly low power stations.

THANKS AGAIN!

'73 de Joe, K3JAD

I'm a relative newcomer to tube radios but I'm having a great time restoring an old Blaupunkt Verona 2600 recovered from my Uncle's attic!!!

I picked up a box of ~300+ vacuum tubes at an auction a few weeks ago. I was hoping a few might match what I need for the restoration job, but sadly none of them do.

I figured someone could use the tubes anyway so - as part of my continuing education - I also picked up an old tube tester at a flea market - Knight Model 600A.

So here's my question .....

Checking the tubes in the box, I'm finding that about 1/2 of them so far are just bad. Not unexpected. The rest are giving fairly good results on the emissions test. A pleasant surprise.

But ALL of them, so far, are failing the short line test on one channel or another. However, most are failing on the same pin - which makes me suspect the tube tester more than the tubes. I've checked a few of the tubes by hand using a multimeter and detect no incorrect continuities between the pins.

Reading about tube restoration online, I've read a number of times that shorts between pins is a far less commmon way for tubes to fail than a loss of emmissions. But I've also read that checking with a multimeter when the tubes aren't hot, can lead to lots of false positives. Then again, it could be that the whole box was the garbage bin of shorted tubes from someones shop.

So what gives?

Should I believe the tube tester? Should I believe the voltmeter? Is there a way to fix a tube with a short but is otherwise functional? I guess there's no way to get inside the glass to seperate leads without losing the vacuum.

Again checking online, it seems some of the tubes I've got are somewhat rare and might be of use to someone else. So is it worth continuing on to try to save some of them? If there's a chance that SOME of them could be saved, I was toying with the idea of building a transconductance tester and going a little deeper with the project. But If I'm going to nothing but grief in the end, then I may punt and just go back to just fixing the radio.

Of course, if anyone would like to take some of them off my hands in exchange for the 6 tubes (or substitutes) I need for the Verona (ECC85,ECH81,EF89,EABC80,EM84,EL84), I'd consider that as well.

Thanks!
David

Sounds like you may have a leaky/shorted capacitor in your tube tester. My Superior tester acted that way, and that was the problem. You may find it with your multimeter or you may just want to replace the old caps with modern plastic film caps for reliability.

You might even find a couple of bare wires or terminals touching inside the case. If it was a kit, you can't take anything for granted.

Tube testing isn't 100% reliable, even with a first rate tester. The circuit is the best test. A tester is best for culling out the obvious bad ones. And many tubes with weak emissions will work OK in circuit.

David,

In my experience, the tubes are not the first to suspect if something is wrong with a tube radio. It is more often the capacitors, especially coupling capacitors of the paper type that leak and cause a high voltage on the next tube's grid etc.

I restored a 1939 Blaupunkt and did not have to change any tubes except to replace the two that were missing (see my web page below.) From the list of tubes I can see that your Blaupunkt is much younger, probably from the 50's. Of these tubes, perhaps the magic eye ("troll's eye" as we call it in Norwegian), EM34, may be weak due to fading fluorescence, but the others I would expect to be OK.

Sverre Holm,
Oslo, Norway

They may be showing short because you are not testing them correctly. I am not familiar with the Knight tester but on some testers you have to push a button or disconnect a pin by the switches for a short test. Some tubes such as a 12at7 have cenertapped filiments and that could be where you are seeing a short. Also lightly hit the tube whild doing the short test to see if there is anything loose in it. If possiable try one of the tubes in a working radio or try a known good tube in the tester.

One trick to see how good a used tube is is to reduce the filiment voltage one step while doing the emission test and see how fast the meter falls off. The slower the beter.

2399. How does USPS parcel insurance work?

Newsgroup: rec.radio.amateur.boatanchors

From: wasatch <wasatch@jps.net>
Message-ID: <YSxr7.7333$ao2.2274915@nntp1.onemain.com>
Source record: 49493

Lets say I mail out a radio worth $200 which is insured for $200, and then the radio becomes totally damaged during shipment, and further lets say in this particular case the Post Office agrees that they will pay out the full $200.

Who then gets the damaged radio: does the P.O. keep the damaged radio and pay out the $200 to the claim filer, or does the P.O. hand over BOTH the money and the damaged radio?

2400. Re: How does USPS parcel insurance work?

Newsgroup: rec.radio.amateur.boatanchors

They keep both the $200 and the radio. (Just kidding, you get the smashed radio)

I've never collected insurance from the USPS for damage. They always claim it was improperly packed, because by definition, if it was damaged, it was improperly packed.

I've collected from both UPS and Fed-Ex for damage and loss.

This was all a few years ago when I ran a mail order company. Perhaps the Post Office has improved their ways (but I wouldn't count on it).

Not sure about the USPS however UPS does insure all packages but I believe there is a $100.00 limit for no charge. If you want to insure it for above their minimum which is either $100.00 or $300.00, check with them, then you will have to pay for each $100.00 increment in insurance. One good thing about UPS however is that they signoff on the package when they accept it. If they feel it is improperly shipped they will not accept it at the UPS desk or that's been my experience.

But, If I have the story correct, under $50 the recipient makes the
claim. You'll see that when you post because you aren't issued any
'number' or anything. Its between the recipient and his local
Postmaster. In the big bux range like $200, I understand it to be the
SHIPPER who has to make the claim and follow it thru. This obviously
entails a paperwork flow between local Postmasters and is slow.
I think the under $50 receiving Postmaster has rights to keep the
damaged article at his discretion, but in your $200 case, the SENDING
Postmaster gets tagged with deciding disposition of the item. I guess
they both fluff that issue or else every postmaster's office would have
wall to wall broken bakelite radios.
I have asked this same question at the PO when I had a $22 radio get
broken. Even the local Postmaster wasn't really sure of his
statements. If you find yourself in a pissing match with them, I'd do
some serious web searching to find out the details because they may well
tell you only what they don't know.

Michael - is it really necessary to be such a smart ass and a know it all? The front panel of the unit says audio pre-amp on it. Therefore I am calling it what it is. If I had a manual to go with it, their would be more detail in my posting. I seriously doubt that this is the unit you are describing. The styling of this unit matches the original Gonset Goony Bird Communicator 1 which was built in the early 1950's, not 1961. Not very many people were fooling around with FM in the early 1950's.

If you don't like the ads in this group, their is a simple solution....don't read them!

73 and have a nice day!

Xtal freq - 11.1 = band. And that will be the bottom end. Say for 40m, you use 7.0 + 11.1 = 18.1 for the xtal. You can verify this by looking at your existing xtals. So for 30m, 10.0 = 11.1 = 21.1 for the xtal. etc.. Also you can get more than one band per xtal if you vary the bandswitch and or preselector settings. I'm trying to remember, but I think one formula for the second set is xtal freq-11.1 + xtal freq. So a 18.1 40m xtal could also get {18.1 - 7.0 + 18.1 = 15.1 mhz. I think thats right anyway... I haven't been using my drakes in a good while. Also in some cases with strong xtals etc, you can get a third band about 185 kc or so below the xtal freq, but this doesn't always work. But the "2nd" set will always work, as long as you end up within the preselctor range of the radio. IE: over 30 mhz won't work, and much below 160 m won't work without the extra low freq converter. The preselect is too far out. With a hand full of xtals, I had about 70-75 % coverage of the whole HF spectrum. Also, beware of any possible IF problems. I don't have a manual handy, but some freq's are quirky. Such as around the 5-5.5 range I believe. Anyway, you already have 5 new bands for SWL use by reading this post..:) "using the existing ham band xtals" You can also get 5 mhz by setting to 80m, and preselect in the 6-7 range. 5 mhz will be at about 125 kc???? kc or so on the dial. Look for wwv while rocking the preselector. MK

> Do you have access to a Drake R4-B Receiver manual ?

oops...I thinked I goofed on my adding.. Actually, you won't get 5 new
ones cuz the high band xtals will push you over the limit of 30 mhz
for the second set of bands... The low band xtals should work though.
The 40 xtal at 7.0 + 18.1 would be 25.1 mhz , not 15.1 I must have
had a vapor lock..So the 20m xtal would push you over 30 mhz and not
work. MK

>
> So what gives?

Myself, I wouldn't chunk any tubes, just because a tester said they
were bad. Unless maybe they are obviously bad or gassy etc. The reason
is many times a tube that might not work in one type circuit, might
work fine in another. I think the best test is in the radio. Either it
works , or it doesn't. I've got two fairly good testers, and they are
handy for judging the appx life left in many tubes, but I've seen many
tubes that tested pretty flaky that still worked in the radios in
certain types of circuits. Many times I would have radios with say
multi 6UA6's or whatever, and I would swap them around to find the
best matches for the circuit. It can make a big difference. Say for a

receiver tube it would be more critical than say a vox tube or whatever..I'd always use the best ones for the critical circuits. MK

This receiver is in very good shape and very clean. It has been re-caped, cleaned and cabinet has been touched up with St James Gray. A new drum dial decal has been installed. Front panel is very good. It is working but needs alignment and adjustment. This receiver has the 100kc crystal calibrator. Original manual and Sam's included. Two plug-in adapters also included, they could be SSB and FM adapters, I do not know. Pictures available on request. $425 plus shipping. This receiver is very heavy.

Thanks,

Ron, AB5WG

Source record: 49409

I've been using an ATC for about a year, now. On 75 meters, using about 700pf of external C, I've been getting about 80-90 watts out. My B+ is about 1050 volts, key down. No problem. I've accumulated about 10 spare 813's and this weekend I decided to cycle them through the transmitter and check them out. I had 2 duds (guess from where...hi), 2 were putting out about 65 watts, and save one last tube, the other 6-7 tubes, including the original tube in the tx, were putting out about 80-90 watts... what I expected. One tube, however, is different than all the others. It gives me about 140 watts out. The signal is clean, modulation is fine, plate current is, of course, a bit higher. The settings are in the same "range" and the output C is a bit higher at full output. I get a nice dip, too. Question: Is there this much variance between 813's? Are there "hot" tubes out there or is only one of my tubes really "good"?

From: "George W. Runyan Jr." <wb6yec@earthlink.net>
Message-ID: <3BAF6C6A.A0E0881@earthlink.net>
Source record: 49411

I have a decent Ranger 1 for sale. It has the HLR mods - PTT, audio, SS bias with pot to control modulator biasing, external 18k for VFO, relays for cutting voltage in standby position and pot to control power out for driving a class B linear. It comes with an original manual and all the upgrade information. I have two Rangers and decided to let one go to a new home. Asking price is $275.00 + shipping USA.

The HQ 170 is decent and works well. Great combination with the Ranger. I am asking $150.00 + shipping for the receiver. If I sell both together I would take $400.00 + shipping costs.

This is a great combo for the Ham just entering the BA or AM dimension of the hobby.

I can supply the D-104 and a relay if requested. The mike would be an extra $50.00 and the relay would be $25.00.

Thanks and 73's

George

2421. FS: Large stock of valves - very cheap

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-24 19:40:03 UTC
From: arnoldg@enitel.no
Message-ID: <3baf8bb1.15178891@news.enitel.no>
Source record: 49414

Hello,

I just got a large stock of valves from an old radio/TV repair shop
that has been closed for years. The owner just died and the shop was
sold at an action.
All the valves are completely new, never used. They are in original
boxes and in mint shape. The valves are mostly HALTRON brand, but
obviously a large part of them are just rebranded by Haltron.

The following are for sale.

950 pcs DY 87 $ 0,40 HV single rectifier

60 pcs EB 91 $ 0,50 = 6AL5
40 pcs EF 50 $ 0,40 WW2 wideband pentode
20 pcs EF 55 $ 0,50 WW2 wideband radar pentode
200 pcs EF 183 $ 0,50 = 6EH7 remote cutoff pebtode
40 pcs EY 81 $ 0,40 Booster diode 550V 150mA
40 pcs EY 86 $ 0,40 HV single rectifier

220 pcs PABC 80 $ 0,50 triple diode + medium u triode
400 pcs PC 900 $ 3,00 high gm VHF triode + audio
90 pcs PCC 85 $ 0.40 double triode VHF
280 pcs PCF 200 $ 0,50 triode + high gm pentode
350 pcs PCF 201 $ 0,50 Triode + high gm pentode
630 pcs PCF 801 $ 0,50 Triode + high gm pentode
370 pcs PCF 802 $ 0,60 Triodepentode
730 pcs PCH 200 $ 0,50 Triodeheptode

150 pcs PCL 81 $ 0,60 Triode outputpentode
190 pcs PCL 82 $ 0,50 Triode outputpentode Wa 7W
200 pcs PCL 86 $ 0,60 Triode outputpentode Wa 9W
250 pcs PFL 200 $ 0,50 Pentode + high gm outputpentode
(S= 22mA/V Wa 5W)
100 pcs PL 36 $ 0,50 Line outputpentode Wa 12W
170 pcs PL 82 $ 0,50 Output pentode Wa 9W
170 pcs PL 83 $ 0,50 Output pentode Wa 9W
360 pcs PL 84 $ 0,50 Output pentode close to EL 84 l
200 pcs PY 81 $ 0,40 Booster diode 550V 150mA
100 pcs PY 83 $ 0,40 Booster diode 175mA

Even more discount is available if you buy large quantities.

Please contact me by fax (+47 57 69 12 67) or e-mail
(arnoldg@enitel.no) if you are interested

2422. Greatest Boat Anchor Amps of History

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-24 19:48:24 UTC
From: cathexis@your.haterols.com
Message-ID: <3baf8cbc.14967976@news.erols.com>
Source record: 49415

Greetings,

Farfest in Bowie MD is coming up and I'm
considering shopping for an amplifier for my FT-980.
Wallet will not allow anything remotely expensive.
So perhaps there are some Boat Anchor deals to be
had??

Never owned an amp. Guess I'd be looking
for something rugged, simple and relaible rather than
priceless, rare and capable of "Gigawatts." <grin>
Not sure, perhaps Heathkit SB-200 is a possible ?
Also, for those of you who reply please assume I don't
know much and give more than model#'s with no
brand name or nothing else. Possible prices are also
appreciated.

Thx
Andrew

2423. Re: Testing tubes - need advice.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-24 20:41:36 UTC
From: dx528@yahoo.com
Message-ID: <31b11dfa.0109241241.348a4394@posting.google.com>
Source record: 49417
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Hi David,

I agree, with other comments posted, that the most reliable test for tubes is "in circuit" testing.

The problem with that method of testing, of course, is assurance that all the tubes used, are in fact, "good".

The "run of the mill" tube "checkers" test "cathode emmision" rather than transconductance (mhos), inter-electrode leakage AND grid current leakage.

The only KIT type tube "tester" with all three types of testing (transconductance (mhos), inter-electrode leakage and grid current leakage), to my knowledge, was the Healthkit Model TT1/A.

There a number of similar testers that were manufacturered. Their names/model numbers escape me however. (One of the many signs of my age!)

If you choose the "in circuit method",I would suggest you purchase a "Howard Sam's" tube cross-reference/substitution guide (small paper backed booklet). Many of the varieties of European "Valves" have more commonly used "TUBE" type numbers on this side of the pond.

All your questions are welcome.

Some of this info you may also find on the net, e.g. on
http://www.duncanamps.co.uk/cgi-bin/tdsl3.exe/
You will find that for instance the EM84 = G6, ECH81 = 6AJ8 ...
Just typing the tube type in www.google.com or another search engine often
also brings up the equivalent.

Thanks, especially to Del K9FCM because his message was fine business CW copy style, with no punctuation nor unecessary capitals. By the way, and for what its worth, I got an email on this thread wherein FEDEX ground was said to be far cheaper then UPS ground or USPS standard parcel post. That was surprising and usefull information.

Source record: 49432

!!! LOSING HAIR? PLEASE READ!!!

About 2 years ago I was losing hair from stress, anxiety and
medication for treatment of both. After visiting my mother months after,
she had noticed my hair loss immediately. As we talked, she told me about
what my great, great grandmother and others have done in a certain part of
Russia. With a great sense of relief suddenly my hope fell apart, as the
ingredient list started to include a trip to Russia for a certain vegetable.
Luckily after doing some research I was able to import it and grow it here.
When I put this concoction together and tested it on a few willing friends
and I, we were all AMAZED after the second and third use. The first thing
you will notice is the shinier tub drain, and then after, you will feel the
stubbles on your scalp or just regenerated hair growing "NO BULL". Best of
all, the bald spots start growing NEW fuzz like hair.
I'm trying to white this short in laymen's terms for all to
understand, that this is NOT A SCAM and it works. I've started selling this
product to raise money to research how it works and to pay for the
ingredients that are not CHEAP. Last of all the soon to be FAMOUS and
PATENTED formula can be yours to use for $55.00 shipped anywhere in the U.S.
That is more than a three months supply at three times a week interval to
stop your hair loss for up to six months or more. My return clients can
receive the same size formula for $35 shipped forever. That's less then
$100 a year, until I sell this to a major
Company who will charge MUCH more. Please E-mail me at highendauto@home.com
For more and any questions.

Greetings,

Just acquired (free) a trio of Canadian Marconi CMC 189-575's. Also says Karr CH 25 on the front panel. They are 8 channel fixed frequency ssb/am transceivers. Runs a pair of 6883's in the output. Nice radios and they work! But, no service data came with them.

Any one have a schematic or know of a source for service information? These would move easily to 3.885 Mhz and get me on AM.

Any leads would be appreciated.

Thanks,

Wally Gibbons

Message-ID: <bY4s7.2337$H4.434090@news2-win.server.ntlworld.com>
Source record: 49441

Help
I've just been given a receiver with no id plates which I'd like to identify, it's black, 13.5" wide by 9.5" tall and about 10" deep and looks very much like a WW2 aircraft receiver, it tunes 150Kc to 12Mc in 3 bands and has 8 valves(tubes) as follows:-
12SK7 3 of
12A6
12SA7
VR54 - marked UK Air Ministry but Canadian mfr
12SQ7GT
12J5GT
The radio has no power supply and only a 4 pin power input, antenna input and phones output, it has 4 crystal frequencies as well as the VFO position marked MO, it receives Mod (am) and CW with a bfo Pitch control, the ident plate seems to have been removed to allow installation of an aerial trimmer on the front panel. The radio looks very well made with what look like white ceramic valve and crystal bases and the wavechange and variable capacitor (3 gang with one large widely spaced section) all operate through 90 degree drives, all the band trimmers and coil adjusters are accessible through slots in the lower right of the front panel in a rectangular bank which has a removable frame that looks like it would hold a paper/card list of frequencies or similar. I think the set is from the USA and would be grateful of any information about it's use and pointers to schematics etc - it'll go well next to my R1155 and maybe share it's power supply, a source for the power connector would help me avoid altering the set which is very close to original.
Thanks

John

2455. Astron RS-35M Power Supply Voltage

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-26 03:57:30 UTC
From: Vince Staffo <vstaffo@twcny.rr.com>
Message-ID: <Kmcs7.544900$EF2.76816646@typhoon.nyroc.rr.com>
Source record: 49349

While making a repair to my Astron RS-35M Power
Supply I noticed that the 22 volts supplied by
Diodes CR101 & CR102 does not drain off
when shutting off the supply. I assume its due
to the large value of the C5 filter Capacitor
which is 70,000 microfarads! I see no bleeder
resistor and I wonder if anyone else has noticed
or encountered this!

Thanks,

Vince WB2FYZ

I believe the only word that is really over used is "rare" . There
should be considerably less "rare stuff " than "vintage stuff".

Vince,
I have two RS-35M and they both do the same thing as yours. I suppose
Astron tried to save a dime per unit by leaving out the bleeder resistor.

Hi Dave:
A "Classic" radio is at least ten years old (age figured from first year
of manufacture), but NOT required to participate in the Classic Exchange.
YOU MAY USE ANYTHING in the contest, although new gear is a distinct scoring
libiality.
Good Luck & 73, Vance k5cf

2481. Can I get Advise on Boatanchor Amps.??

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-27 01:08:27 UTC
From: cathexis@your.haterols.com
Message-ID: <3bb277ad.96276645@news.erols.com>
Source record: 49373

I'm going to a Hamfest this weekend and wondering if anyone
outthere could give me some advise on possible deals to look for. The
price range would be topping out at 5 or 6 hundred. (could go over for
something "sweet"). Simple and rugged is probably best as it would be
my first amp. Current rig is FT-980. Intended use is HF only and WARC
is nice but not essential. 10M nice, but not essential. Nice to get it all
of course.<grin>

SB-200's and AL-811's come to mind as they work off the mains
and are "entry-level" style amps. Weight is not a big issue except I've
noticed there are certainly deals out there on the net but the shipping
on some 135# Hammerlund whatever boggles the mind Learning to use
a Power Supply would be worth it if the amp was worth it. Of course I'd
love to be running a full gallon but don't know if I'll be able to afford it. So
maybe I have some idea what I'm looking for but there are so many models,
brands, etc. eHam has great reviews but its hard to pick winners as not all
reviews mention price or availablity. Imagine you're trolling through the
tail-gaiters (my pun), what should I look for ??

Andrew/ KG4JBM

PS If you 're looking to sell and are near D.C. area please respond with that.

From: Mark Bell <bell@blazenet.net>
Message-ID: <tr4vgm44epvo9d@corp.supernews.com>
Source record: 49377

I've always considered a "classic" radio to be a hollow state radio manufactured during or after 1940. A radio such as a Kenwood TS-830S with only a tube driver and PA does not qualify. I consider an "antique" radio to be a hollow state radio manufactured prior to 1940. My definitions only.

I really don't think there is an official definition though.

I use the earliest date I can find in an old issue of QST or ARRL handbook. I've wondered how Al handles this though, for official scoring purposes. If in doubt, use your best guess and make a notation on your log sheet.

> Some rigs were sold for many years. Do I use the year it was introduced??

Yes.

Just look for an amp without a lot of visible hours under its' belt.
Just check the lettering on the front panel to see how worn it is. Check the cabinet to see how scratched up it is. Check the manual to see how dog-eared it is. How convincing is the seller as to the unit's functionality?
Make sure it is wired or can be wired for the AC voltage you plan to use.
You will probably find an SB200, FL2100B, or AL80. All nice amps!!
Any other questions, feel free to ask!!

2487. Re: Astron RS-35M Power Supply Voltage

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-27 02:41:10 UTC
From: Lamb <k7fm@teleport.com>
Message-ID: <07ws7.1678$hv6.280895@nntp2.onemain.com>
Source record: 49380

High voltage power supplies need bleeders for safety purposes. But, there may be an advantage to not using a bleeder on low voltage power supplies. That will keep voltage applied to the capacitor for awhile and may actually prolong the life a bit. It would also prevent surging current when the power supply is turned on - thus limiting the stress on turn on.

Photoflash capacitors do not have a bleeder resistor - which greatly helps in decreasing power consumption.

So, although a resistor may be cheap to install, you must weigh the benefit with the "cost".

I think I would leave it out.

Assume that the tubes are bad and need to be replaced. Factor that in to the price that you pay. Unless it can be demonstrated how much power out you can get.
Even if it looks like brand new it still may have bad tubes.

Your dollar amount will permit you to find the SB-220, the "big" amp from Heathkit. But check your rig's specs for keying- these old Heathkits use AC. I wasn't able to easily interface my new FT-1000MP to my old amps.

Thanks to all for the great advice!!

I've decided to forge ahead with my tube education. I've ordered the schematics for my Knight 600A tube tester, so I'll check that out. And I've decided to try my hand at building a transconductance meter as well testing the other specs the checker doesn't handle. Testing all those tubes 'in circuit' is a great idea - except that I don't have the circuit to test them in, only the one tube radio in my shop.

Still need the tubes for my Verona, but maybe I can do some swapping down the line when I've got my tubes all checked out.

Thanks!
David Pinto

If you're looking for a nice clean DRAKE R-4B receiver this may be of interest to you.

It is from an estate and is in extremely clean condition. (Others may say that it is MINT but that is a term I do not use lightly). It does have a small amount of "grunge" on the copper-clad chassis which could be cleaned up but I am leaving it as-is for the new owner to do if desired. I however would say that it is definitely "collector quality".

Some Drake fans actually prefer the R-4B to the R-4C because all the filters are included whereas in the C-line they had to be purchased separately. I cannot see any modifications, repairs or signs of excessive heat. All it needs is a cleaning up and a 6EH5 tube which is missing. The PRESELECTOR is a bit sticky at the high end, probably because the radio was not used for a few years. This can easily be cured by cleaning and lubricating the mechanicals. It is smooth and positive otherwise. There is no play in the VFO and the cosmetics are excellent. There is a copy of the manual included with the radio.

I am asking USD $250.00 plus shipping for this fine example of one of R L Drake's excellent receivers. I will pack and ship worldwide. If interested please reply by e-mail.

Cordially,

Michael Crestohl W1RC

The SB220 used DC keying; but at a higher current rating
than most modern rigs can handle.

He is referring to the fact that the external amplifier keying
in the older amplifiers may exceed the amplifier keying rating
of your exciter or transceiver. You may have to provide an
intemediate relay or solid state switch to avoid damaging your
rig. Another thing to consider is ALC compatibility.

I have for sale a HW-101, cabinet and front panel have no scratches. Receiver works great. Full output xmit (approx. 100w). Works on cw and ssb however the alc meter does not indicate properly. Manual included. $140 u pay shipping. Also have HP-23 power supply for $40 u pay shipping. Tnx for reading. Ed KC4FD

The Icom 706 is the best 6 meter rig available.

It has Subaudible tone encode and decode built in

Also, I found out that the hustler mobile antenna resonates exactly in the
middle of the 6 meter band with no coil installed.

Have fun.

Just a comment about the R1155. I read somewhere that unlike many radios
the 1155 chassis/case is not at B- (or HT-) in other words the B-
negative rail is a point somewhere inside the set. You are probably
aware of this and it can probabaly be accommodated if the power supply
is also to be used for another type of set where the B- IS connected to
the metal frame. I had an 1155 many years ago but can't remember any
details.
I believe this is correct? You don't want a difference of a few volts
between say the chassis/metal case of another radio and the 1155 causing
damage or misoperation? Suggestion anyway.

Terry
Thanks, yes you are right so they'll have to be separate. I've now identified the receiver it's a US Navy TCS unit made by Collins - my description was misleading in that it's 1.5-12Mc not 0.15 - 12Mc!, I now have a circuit diagram and a number of references to follow.
Thanks

John

> of course.<grin>

If you aare willing to settle for simple, rugged and HEAVY, that should be pretty close to being enough to get a Henry 2K4. Mine ran about that two years ago. It ain't perfect cosmetically, but it works great and looks good.
Contrary to others, I don't really worry about the paint as long as there are no dents, or broken parts.

I'd suggest sticking with something that uses common tubes. I love the Hallicrafters HT33, 33A and 33B amps, but the tubes are expensive, rare, and usually gassy. Most run in the $300 to $500 range for a nice looking one. Although I've seen a few at outrageous prices on e-bay. (Only the HT33 uses readily available tubes which are 4CX-300s as I recall)

These amps are HEAVY, table top units. If you get interested in one, check it out to make sure there are no signs of it having been dropped. As I said, they are HEAVY and the whole top of the cabinet opens. This has led to many of them being picked up by the cabinet in such a manner that when it comes off the table, or desk the person is only holding onto the top, which makes a very poor handle, particularly when that 113# amp hits full open. You want to make sure to get ahold of the "bottom" with a good grip. If some one helps, make certain they know not to grab it by the top.

>
> SB-200's and AL-811's come to mind as they work off the mains
> and are "entry-level" style amps. Weight is not a big issue except I've
> noticed there are certainly deals out there on the net but the shipping
> on some 135# Hammerlund whatever boggles the mind Learning to use

They run closer to $1300, but the old alpha 76A with a pair of 8875s, or the model (C I think) that uses three of them makes a very nice amp. I bought one that looks like new for about that price and saw another one with three tubes, that also looked like new go for $1300 on e-bay. I've seen the same amps with minimum bids of over $1500-$3000 that received nary a bid.

With the stock marked down and unemployment up this might be a good time to watch for some really nice amps at reasonable prices. Take your time and give any amp a good inspection. If you find a good one, I'd grab it. Just carefully check out the going prices before shelling out a wad of cash.

Anyone know what set this was used with ?

Type MT-31C, Tuning Meter

made by Northern Electric, Canada.

It's a mA meter housed in a round bulkheard mounted
housing, gret, with AM on the side and MT-31C

so, which set ?

Ben G4BXD. G4BXD@qsl.net

>
> Uhhhhh-huh.....

I've often said this, Dan.
And what I meant was:

"I don't know if this works, and I'm not going to try it.
I'm afraid to plug it in because the caps are probably shorted
and I don't have the time or money to fix it.
So I'll leave it to the new owner."

When I tell him it's "untested," he should pay attention,
use his head and bid accordingly.
I tell the truth to the best of my knowledge in my listing,
and I expect the buyer to have at least some knowledge
of the item on which he is bidding.
If I've told the truth and he is bidding in ignorance,
who's fault is that?

Wow! Huge advise from everyone. Can't thank you enough.
Before I march out there with a smile on my face and a wad of cash
in my hand I'd like to ask again about keying. My rig is a Yaesu FT-980.
The original QST review was in Nov. '84. Don't know how long they made
them but this is an 80's rig. Is it rugged enough to handle keying issues?
Or,...how far back in age can I safely go before the (un-modified) amp
could be a threat to my rig because of keying?
Hope that makes sense.

TIA,

Andrew

>If I've told the truth and he is bidding in ignorance,
>who's fault is that?

David ..

There is a BIG difference between "untested" which is a simple TRUTHFUL statement that implies what you mention in regard to old caps etc. and "no way to test" which, IMHO is likely an untrue statement (lie) designed to suck in the unaware. What I failed to mention before was that the statement "no way to test" is often accompanied by the statement(s) "should work", "told it was working", "worked when last used" ETC....if you don't want to test it, fine, just don't insult the buyer by saying that you have "no way to test it"!!!

If you want to be honest about it, just say something like:

"I have not tested this unit and it is being sold AS-IS, no guarantees."

Problem is, being honest is likely to drive down the price!

Dan ..

For what it is worth the 1155 should be wired with the chassis at earth
with the B- floating. It moves up and down depending on the AGC and
gain setting. The heaters should be wired to real DC (not 6.3 V AC) and
one side is 0V earth/chassis.

This means that the PSU has to have a facility for shorting the B- to
chassis whist testing it which is removed before plugging into the set.
Well, that's how I do it anyway.

You shouldn't get voltage differences between the case on an 1155 and
any other boxes that are earthed in the normal way.

Regards

You can do two things. Use a slave relay to handle the current
and voltage polarity issues. Also, there have been numerous
articles written for solid state switches used to interface between
the rig and older amplifiers (usually one or two transistors in a
small minibox). I'm sorry I can't recall the publications or dates,
but it is 'common knowledge' and I am sure someone can
provide you with a link to the info.

Robin: That is a much better way of describing it than I did.
Anyway just wanted to mention since the idea of using a power supply
perhaps 'common' to the 1155 was indicated. Terry.
(Share the ideas! Eh?)

2549. FS: General Radio Company 1213-D w/PS

Source record: 49343

General Radio Company 1213-D Unit Time and Frequency Calibrator, with 1201-B regulated power supply (attached).

It's in very good cosmetic and operational condition. Markers at 10 MC, 1 MC, 100KC, and 10 KC. My guess, with miniature tubes and MC and KC markings is that it was made in the 1960s.

This is a marker generator which is a handy companion to general coverage analog receivers. It's not huge - roughly a foot wide by 7" by 7". Apparently they are pretty rare.

$50.00 plus shipping

Easiest way to tell is to look at the front panel. On the R390A, the nomenclature late (or the space where its supposed to be) will be directly above the frequency readout bezel. There will be a control (ant trim) located between this plate and the top of the panel. On the R-390, this plate is located near the top of the front panel and there is no control located between the plate and the top of the panel. On the R-390, the antenna trim is located below the right-hand meter. So, you don't have to take the covers off to see which model you have.

Among other stuff, I'll be taking the following to Bowie/Gaithersburg,
tomorrow:

1. Viking II/122 VFO, very nice, on the air, spare finals/modulators,
mic/key plugs, orig books $250.00
2. Gonset Comm II (2m) w/ matching VFO/preamp, MIC, power cable (works
fine!) $100.00
3. Eimac 3-400Z (NIB) $100 each (have 4 left). Work same as 3-500Z in
all ham linears.
4. Multi-Elmac AF-67/PMR-7, nice, with new plugs and books. They both
work!! (no p.s.) $125.
5. GRC-19 115vac 60Hz power rotary inverter (mounted in shelter to
supply 110/60 for RTTY. $50.
6. A.R.C. Type 12 test and control boxes
7. HAM II rotor, control box, overhauled, all access. hardware, book,
$200.00

Available to bring, if interested:
E. F. Johnson Valiant I, excellent++ (panel and cabinet W4PNT), ER audio
mods, on the air. $595.00
R-390A (EAC/Hammarlund) Excellent $400.00

2561. FS: 3-1000Z chimneys and tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-29 14:56:12 UTC
From: jimmoci@aol.com
Message-ID: <20010929105612.04879.00001240@mb-mm.aol.com>
Source record: 49255

I have two 3-1000Z tubes and chimneys. The tubes have very low hours on them. The glass is perfectly clear except around the base of the tube socket pins. They were used in audio modulator service, not RF. I upgraded to 4-1000's and do not need them any longer. I would like $250 for each tube and $50 each for the chimneys. If you want to see them they will be available at the Packratts Hamfest and Sellersville hamfests in PA in the next couple weeks. $525 for the whole lot shipped. As with most used RF power tubes no warranty is implied.
Tnx,
Jim

2562. WTB: HRO "Titties"

Date: 2001-09-29 15:18:35 UTC
From: Bis Wichy <wd0hco@ev1.net>
Message-ID: <B7DB507A.3858%wd0hco@ev1.net>
Source record: 49256

Looking for HRO titties or actually just one.

What's a HRO "tit" you ask?

It is the chrome gizzmo that sat above the big HRO dial. Some call them "Arrow heads", "Dial Positioners", "Dial Indicators", "Diamonds" or "Dial Studs".

I call them "tits" because well... I have been staring at my HRO too long...

Someone must have one somewhere in the desk drawer for some home built project that was never built.

I could always use a chrome slot screw head but prefer the real thing.

If you can find one - please email!

Thanks - Biz - W D ï¿½ H C O

2563. Heath SB-xxx Dial Part Wanted

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-09-29 16:00:19 UTC
From: Bruce Stock <stockb@accessone.com>
Message-ID: <nemt7.16501$ck.117087@sjc-read.news.verio.net>
Source record: 49257
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

My SB-401 has a need for the small pinch wheel that sets the dial hairline to the correct frequency. I believe all the Heath SB-series receivers, tranceivers and transmitters (except the SB-104) used the same pinch wheel.

To further clarify, I'm not talking about the pinch wheel for the main tuning mechanism, but rather the wheel and shaft connected to the small conical aluminum knob at the upper right of the dial escutcheon.

If you have a junker SB-series whatever and can supply the part, please advise, I'll appreciate it very much.

Message-ID: <9p4sg9$2259$1@madmax.keyway.net>
Source record: 49258

Many things should be considered when looking for an amp.
You need to get knowledgeable about TVI prevention, Antenna
type, component ratings and IR losses, drive requirements,
APC overshoot, hot keying... Everything you add to your
station will require more radio knowledge to keep up.

The first thing I would do is buy the service manual for your
FT 980 and see what it does to key an external amp. Then
look up QSK on the net, and the AMPS reflector archives.

Some radios are quite ambidextrous on their own. My TS-830
has dry relay contacts, so it will do anything. Electronic keying
is far better though for QSK or data modes.

Jim, ac6tk
http://www.cybertime.net/~ac6tk/be.htm

: Wow! Huge advise from everyone. Can't thank you enough.
: Before I march out there with a smile on my face and a wad of cash
: in my hand I'd like to ask again about keying. My rig is a Yaesu FT-980.
: The original QST review was in Nov. '84. Don't know how long they made
: them but this is an 80's rig. Is it rugged enough to handle keying issues?
: Or,...how far back in age can I safely go before the (un-modified) amp
: could be a threat to my rig because of keying?
: Hope that makes sense.
:
: TIA,
:

Bruce
You might try a rubber grommet as a replacement. With the correct
size the dial will ride nicely in the groove on the outer diameter of
the grommet while the grommet fits on the shaft from the knob.
John

>>Good radio BTW. Picks up plenty of signals....
>
>In the right places...?

An R390, A or not, is morelikely than most receivers to pick up signals in the right place and *nowhere else*. Unless someone has really gotten the preselector cams out of phase.

Back on topic, another way to tell an A from non-A is to look for the two big voltage regulating tubes in the bottom. Only the non-A has those.

From the top, a non-A's slug racks and cams are lined up clear across the right 2/3 of the front of the set. An A's racks are in the right half, one set behind the other.

But yes, the antenna trimmer knob location is the easiest. I mentioned the above since the original poster said he had no covers.

You didn't ask what it's worth, but I'd say "If you have one, you don't want to sell it."

Hi,

The RCA AR-88 is indeed a fairly common radio here in the UK and I have seen these given away in the past due to their weight and size. However, these radio's regularly fetch $150 in average to good condition and even more for a really nice one. We currently have an 88D model for sale in excellent (collectors) condition for $240 which we feel is a reasonable price considering it's a really nice one. If you have room (and sound flooring) these excellent radio's are a worthwhile addition to any collection. Just as an aside, I missed out on purchasing a brand new (still crated 88LF) by no more than a couple of seconds at a UK hamfest earlier this year! It was accompanied by a new (un-crated) 88D! Boy, was I upset!

The BC-221 is a unit under the designation SCR-211, of which there are about 25 variants (models), from model A to AN). It is a heterodyne frequency meter that precedes modern frequency counters. The BC-221 (and the Navy LM) are, in reality, low power signal generators, rich in harmonics, which are individually and precisely calibrated (hence the requirement for a serialized calibration book for each unit). They generate frequencies up to about 20 MHz, about the top limit for HF comms during WW2. One can extrapolate higher frequencies, given the error that will creep in. The 221's have an internal crystal oscillator for self-calibration at certain "checkpoints" within the operating range. The units run on 6.3 V (ac or dc) and 150 volts dc, well filtered and regulated. Although most were delivered to run on batteries, a series of AC power supplies were also provided with some units and/or retrofitted later. Later versions of the '221 included modulation to assist in receiver alignment. BC-221's go for about $20-$50, depending on condition and series. Accessories, like carry cases, etc. will enhance the value.

The BC-221 is used to calibrate a receiver by simply tuning the unit to the desired frequency and then tuning the receiver to that signal. Via the same method, receiver alignments can be done. Transmitter calibration was accomplished by setting the BC-221 to the desired operating frequency, tuning the receiver to that frequency (as above), then zero-beating the transmitter with the BC-221 (in the receiver). The applicable technical manual is Army TM 11-300. And that's about it.....

2605. Heathkit Parts radio needed

Newsgroup: rec.radio.amateur.boatanchors

I'm restoring a Heathkit HW-32A 20 single band transceiver and am need of the following..

Good Face Plate
Good Set of Knobs
2 pin Mic plug

All of these are the same on the HW-12A, HW-22A and HW-32 A. If you have the parts I need or a junker radio (12A, 22A, or 32A) with good parts, I would be interested in purchasing it. Please note this is the A model that has the Mic plug in the front.

Thanks

E F Johnson T-R switch for sale. I used it for several years in a 40 M CW station with break-in, and it worked flawlessly. Haven't used it for about seven years now and unfortunately do not have a way to test it. It's a relatively simple piece of gear and should be OK. It comes with a schematic.

$25.00 OBO plus shipping. This is small enough that I'll ship it.

Thanks,

Dave

Message-ID: <U20u7.19350$ck.120450@sjc-read.news.verio.net>
Source record: 49214

My SB-401 has a need for the small pinch wheel that sets the dial hairline to the correct frequency. I believe all the Heath SB-series receivers, tranceivers and transmitters (except the SB-104) used the same pinch wheel.

To further clarify, I'm not talking about the pinch wheel for the main tuning mechanism, but rather the wheel and shaft connected to the small conical aluminum knob at the upper right of the dial escutcheon.

If you have a junker SB-series whatever and can supply the part, please advise, I'll appreciate it very much.

Mentioning catalogs made me think of my collection of Fair Radio catalogs. They are a great reference, something I should take advantage of more often. I have most of them from 1960, but none before, and am missing issues from 1964 and 1965. I would also be interested to know when they published their first catalog. Was it in 1947? I should call them and ask, but wonder if they would know. Any help would be appreciated. 73 - Mike

Hi all, This Wednesday Oct. 3rd is The First Wednesday CCA AM night on 3880kcs!

Please come and join us for an evening of great sounding signals. REMEMBER you DO NOT have to be running Collins gear to checkin. Everything is welcome!

We will have 4 main ncs. One on the East coast, Midwest, Mountain area, and West coast. The main ncs will have others in their area helping with their hour. (Please note ONE HOUR). At the end of their hour the main ncs for that region will contact the next regions ncs and turn ncs over to them etc.

Each ncs will start at 08:00pm in their time zone.

Starting at 8:00pm EDT (0000 UTC) East coast ncs will start the net
At 01:00 UTC East coast ncs will turn ncs to Midwest ncs
At 02:00 UTC Midwest ncs will turn ncs to Mountain ncs
At 03:00 UTC Mountain ncs will turn ncs to West coast ncs

comments please to wa9vrh@ocslink.com

Have fun and enjoy the great sounding AM signals. 73's Larry WA9VRH

If you're looking for a nice clean DRAKE R-4B receiver this may be of interest to you.

It is from an estate and is in extremely clean condition. (Others may say that it is MINT but that is a term I do not use lightly). It does have a small amount of "grunge" on the copper-clad chassis which could be cleaned up but I am leaving it as-is for the new owner to do if desired. I however would say that it is definitely "collector quality".

Some Drake fans actually prefer the R-4B to the R-4C because all the filters are included whereas in the C-line they had to be purchased separately. I cannot see any modifications, repairs or signs of excessive heat. All it needs is a cleaning up and a 6EH5 tube which is missing. The PRESELECTOR is a bit sticky at the high end, probably because the radio was not used for a few years. This can easily be cured by cleaning and lubricating the mechanicals. It is smooth and positive otherwise. There is no play in the VFO and the cosmetics are excellent. There is a copy of the manual included with the radio.

I am asking USD $200.00 plus shipping for this fine example of one of R L Drake's excellent receivers. I will pack and ship worldwide. If interested please reply by e-mail.

Cordially,

Michael Crestohl W1RC

I recently purchased one of the currently available "HS-16A Vietnam" headsets. I paid about $8, all said and done. That's what they're worth, and not a dime more. The people advertising and selling them are OK. I don't think they mis-represent them, at all. They do allude that they are "reproductions". Now, what are they?

The box and wrapping they come in is for-real MIL-qualified. The company that makes the sealed bag material is legit. However, there is no sign of a company name on the product or the package...anywhere. This is in direct violation of both the FPR and the MIL equivalents, even if your talking about COTS. The headset elements are similar to the old Philmore magnetic types. The plastic housing is crude, showing a poor mold. The headband is a bit better, but beware. The headset will crush your skull if you put them on and not pre-adjust them. The height of the elements can be adjusted but the headband is fixed, unlike anything I've ever seen. What happens is that one band or the other will fit your head, the other one will float. Its not too comfortable (but for 8 bucks???). The stamped metal frame and general construction looks like either PRC or Eastern Europe and the threads are metric. These headsets are not HS-16A's. I think they are "manufactured" surplus. Either that or they were a rejected lot or whole contract. Finally, the MIL hasn't had a piece of gear that used pin plugs since the WW2 troop entertainment radios, much less 1965, which is the alleged mfg date.....

This is just my observation of these puppies and thought some might be curious. I bought one and don't regret it. They hang on and old radio and look like they belong there. 73

DS - Some time back I purchased a case of 30 of these units. The outer large box has a mailing label from a Radalab, Inc. 496 Grand Boulevard, West Bury NY. I'm not sure if they were the manufactures or some kind of middle man in the governments purchasing system.

The inner box for each set of phones has the markings of a FSN of 5965-160-1055 with a DSA of 9-28615. Some one with a Federal Supply Catalog maybe able to supply more information or a manufacture from this data.

As you indicate they are not super head phones but were a quick, dirty, and very cheap units supplied during the Viet Nam thing. They are based on the design of the early 1930s and look great, but are not quality units. But where else can you get brand new tensile cord, etc.

BTW - These guys have been in that packing for over 30 years and you too would be very stiff. They KILL your ears when first put on, but like an old glove will form to your head and feel great after some use. <grin>

I have a mint 850S/at station.
This was the last 850 sold by AES in Milwaukee back in 97. The SN is
80400024.
It is Mint with no scratches or marks. I have the original box,
manual and Service Manual.
The radio has both Kenwood .500 cycle CW filters installed.

I also have the following accessories
PS-52 Power Supply Mint with Box & Manual
SP-31 Filtered Speaker Mint with box
MC-60a mic mint with box

I'll sell the entire station for $1300 plus shipping from 27587.

David,
W4IDX

2656. New L-Match Design program

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-10-03 18:27:07 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <9pfml8qed2@neptunium.btinternet.com>
Source record: 49150

IMPEDANCE MATCHING WITH L-NETWORKS

The simple L&C L-network is capable of matching any pair of complex impedances to each other and, when used in RF power applications, it always has a lower internal loss than any equivalent T or Pi network using the same quality components.

Its disadvantages are that to cover a full range of impedances it is necessary to switch the circuit locations of L & C and/or change the direction of transmission. This means neither component can have a permanent ground connection.

Also, at the lower radio frequencies inconveniently large values of capacitance are sometimes needed. (T and Pi networks are popular because they can be designed to avoid these two disadvantages.)

But as the L-network has only two components and circuit changes can be quickly accomplished using alligator clips, it lends itself to simple homebrewing, wind-your-own coils, etc.

A new program L_TUNER is now available from website below.

For a given terminating impedance R+jX and frequency, and the required network input impedance (which may also be complex), L_TUNER computes component L & C values and offers a choice of network configuration.

Input to the program, R+jX, can be obtained sufficiently accurately with a modern hand-held antenna analyser. The program will be useful designing networks to match coaxial lines to the peculiar impedances found at the base of vertical antennas. Use program SOLNOID2 to design coils.

L-networks are used in other places such as amplifier outputs and interstage couplings. They tend to have wider bandwidths than other types of Z-match circuits.

Download program L_TUNER in a few seconds. One self-contained file of 39 Kilobytes. Simplicity itself to use.

2657. FS: Radar modulator unit, APS-104

Newsgroup: rec.radio.amateur.boatanchors
Date: 2001-10-03 20:16:20 UTC
From: worley@snowhill.com
Message-ID: <3BBB71C5.144AB512@snowhill.com>
Source record: 49151

For Sale: mil surplus modulator unit from APS-104 search radar (likely from B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Great collector or experimental item. Located in southeast Alabama, 36330 zip. Email or call 334-347-5281 day/eve.

2658. FS: old unused vibrators or choppers

Newsgroup: rec.radio.amateur.boatanchors

This receiver is the RCA Radiomarine Model CRM-R1A. It is an 11 tube, double-conversion superhet, covering 2-30 Mhz. It contains a Collins 455khz mechanical filter in the IF. It does not tune conventionally, but has instead 20 push button selected crystal controlled frequencies. It is perfect for monitoring a set of favorite radio channels for activity or program material. It has a built-in speaker.

The Collins filter is a Type F455 J31, PN 526 9089 00, which I believe is a 3.1 khz BW.
See photos at:

http://myweb.accessone.com/~stockb/misc/rcacrm.jpg
http://myweb.accessone.com/~stockb/misc/RCAFilter.JPG

The radio is in good working condition, and comes with 6 crystals covering the 10mhz WWV frequency and 5 spots in the 20m ham band.

It's yours for $60 plus shipping from 98144.

73, Bruce AB7YD

2677. FA: B&K TV Tester and a TV tube rejuvenator

Newsgroup: rec.radio.amateur.boatanchors

Sorry if these items are a little off topic, but I know that a lot of guys into ham radio and electronics may also have an interest in these kind of items:

I have for auction on ebay a B&K TV Tester, that is currently at $1:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1013677222

I also have for auction a TV Rejuvenator that can brighten dim picture tubes:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1013679879

For more pictures and info on these items, you can also take a look at my personal web-page:

I need the power and interconnecting cables for a BC-669-D transmitter. They have the AMP ends on them. The power is the one to the mains supply and the other is the one from teh power supply to the transmitter unit.

Mark
